Adversarially VERIFY this Indonesian (id) translation of the KhelSutra upload-trim help against the linter rules. Assume it is WRONG until proven right; check each rule explicitly.

English source:

```
{
  "message": "This clip is {size}, just over the {cap} upload limit, so trim it to your best
rally or two and upload that shorter version.",
  "summary": "No worries, trimming takes about a minute, here's how.",
  "phone": "<b>On a phone:</b> open the clip in your Photos or Gallery app, drag the two handles
at the ends of the video to keep just the rally you want, then save and upload that shorter
clip.",
  "computer": "<b>On a computer:</b> open the clip in the Photos app on Windows or QuickTime
Player on Mac, drag the ends inward to keep only the part you want, then save the shorter clip
and upload it.",
  "advanced": "<b>Advanced:</b> if you'd rather keep the full match, whoever runs the setup can
split it into smaller parts with scripts/chunk_video.py, or upload the whole video to Google
Drive instead."
}
```

Candidate id:

```
{
  "message": "Klip ini berukuran {size}, sedikit melebihi batas unggah {cap}, jadi potong saja
menjadi satu atau dua reli terbaikmu lalu unggah versi yang lebih pendek itu.",
  "summary": "Tenang saja, memotong video hanya butuh sekitar satu menit, begini caranya.",
  "phone": "<b>Di ponsel:</b> buka klipnya di aplikasi Photos atau Gallery, geser dua pegangan
di kedua ujung video untuk menyisakan reli yang kamu mau, lalu simpan dan unggah klip yang lebih
pendek itu.",
  "computer": "<b>Di komputer:</b> buka klipnya di aplikasi Photos pada Windows atau QuickTime
Player pada Mac, geser kedua ujungnya ke dalam untuk menyisakan bagian yang kamu mau, lalu
simpan klip yang lebih pendek itu dan unggah.",
  "advanced": "<b>Tingkat lanjut:</b> kalau kamu lebih suka menyimpan seluruh pertandingan,
orang yang mengurus penyiapan bisa membaginya menjadi bagian-bagian lebih kecil dengan
scripts/chunk_video.py, atau unggah saja seluruh videonya ke Google Drive.",
  "self_check": "Saya memverifikasi setiap aturan: (1) Placeholder ? 'message' berisi persis
{size} dan {cap} secara verbatim dengan kurung kurawal, ditempatkan alami dalam urutan kata
Indonesia, dan tidak ada kurung kurawal lain; summary/phone/computer/advanced tidak mengandung
placeholder apa pun. (2) Audiens ? semua baris yang menghadap pelatih memakai Bahasa Indonesia
yang hangat, sederhana, dan bisa langsung dikerjakan, tanpa jargon teknis pada baris coach-
facing. (3) Akurasi & air-gapped ? hanya metode trim yang benar-benar ada dan mudah untuk pemula
(Photos/Gallery di ponsel, Photos di Windows, QuickTime Player di Mac); VLC tidak disebut/tidak
direkomendasikan; tidak ada URL, tautan, atau ajakan mencari online. (4) HTML ? hanya <b>?</b>
sebagai label pembuka tebal pada phone/computer/advanced; tidak ada tag lain, dan sama sekali
tidak memakai <code>, <kbd>, <samp>, <tt>, atau <var>; summary/message tanpa tag. (5)
```

Deliverable wajib ? 'advanced' menyebut scripts/chunk_video.py sebagai teks biasa dan opsi Google Drive. (6) Nama produk/berkas verbatim ? Photos, Gallery, QuickTime Player, Google Drive, Windows, Mac, scripts/chunk_video.py dipertahankan apa adanya. (7) Aman-ICU ? tidak ada apostrof lurus (') di mana pun, khususnya tidak sebelum { atau karakter khusus; saya merumuskan ulang sehingga tidak perlu apostrof sama sekali. (8) Setiap string satu kalimat dan ringkas."

```
}
```

HARD CONSTRAINTS (a linter enforces these ? violating any FAILS the build):

- Audience: a non-technical BADMINTON COACH who may never have trimmed a video. Warm, plain, actionable. No dev jargon in the coach-facing lines.
- The app runs AIR-GAPPED: NO URLs / links / "search for X online". Only inline instructions and plain tool NAMES.
- Accuracy: only recommend trimming methods that genuinely EXIST and are EASY for a beginner:
 - * Phones: iOS Photos and Android Photos/Gallery both trim video natively ? correct.
 - * Windows: the built-in Photos app trims video ? correct. Mac: QuickTime Player (Edit > Trim) ? correct.
 - * Do NOT recommend VLC for trimming (it has no beginner-friendly trim/export). Do NOT invent features.
- The 'message' string MUST keep EXACTLY the two placeholders {size} and {cap} (verbatim, curly braces), and NO other {braces}. The help strings (summary/phone/computer/advanced) must contain NO {placeholders}.
- HTML: phone/computer/advanced may use ? ONLY (a bold lead-in label). No other tags. NEVER use <code>, <kbd>, <samp>, <tt>, <var>. summary/message use no tags.
- 'advanced' MUST mention scripts/chunk_video.py (plain text, not <code>) and the Google Drive option ? that reference is a required deliverable.
- Keep product/app names verbatim: Photos, Gallery, QuickTime Player, VLC (avoid), Google Drive, scripts/chunk_video.py, Windows, Mac.
- Keep every string to one sentence, concise.

Locale notes: Friendly, plain Bahasa Indonesia. "Google Drive" as-is.

Check, and list every failure in 'issues':

1. message contains EXACTLY {size} and {cap} (both present, verbatim, no other braces); help strings have NO braces.
 2. phone/computer/advanced keep ? and use NO other tags; NO <code>/<kbd>/<samp>/<tt>/<var> anywhere.
 3. advanced still names scripts/chunk_video.py AND the Google Drive option.
 4. (id kn/hi only) NO engine/server/bucket/backend as Latin OR transliteration; brand "KhelSutra" not transliterated.
 5. No straight apostrophe immediately before { or a special char (ICU-safe).
 6. Meaning matches English; tone is warm + non-technical; each string is one concise sentence; recommended trim methods are real/beginner-easy (no VLC-trim claim).
- Set ok=true only if ALL pass. ALWAYS return the FINAL strings (message/summary/phone/computer/advanced): if any issue, return your CORRECTED version; else return the candidate unchanged.

2. assistant (2026-07-04T01:51:40.089Z)

I'll verify this translation adversarially against each linter rule. Let me start by finding the actual linter to understand the exact rules being enforced.

5. assistant (2026-07-04T01:51:50.195Z)

The build linter is what actually enforces these rules. Let me find the real linter and its message keys to verify against the exact rules, not just the prose description.

8. assistant (2026-07-04T01:51:56.480Z)

Two hygiene/invariant test files are the likely linters. Let me read them plus the English and Indonesian catalogs to see the exact enforced rules and the key names.

9. user (2026-07-04T01:51:57.512Z)

```
1      // CI guardrails that keep i18n "by design" (docs/archives/FRIENDLY_AND_MULTILINGUAL.md
2      §4):
3      // 1. KEY-PARITY ? every locale catalog has EXACTLY the `en` key set (the
4      extensibility proof:
5      // drop a stub locale and this lists every gap). Trivially green while only `en`
6      exists; it
7      // starts enforcing the moment a kn/hi catalog lands (B5/B6).
8      // 2. NO-BARE-STRINGS (attribute level, v1) ? user-facing component attributes
9      (placeholder /
10     // aria-label / title) must route through t(), never a hardcoded literal. A curated
11     start per
12     // the doc; an AST-level sweep of JSX text can extend it later.
13     import { describe, it, expect } from "vitest";
14     import { readdirSync, readFileSync } from "node:fs";
15     import { join } from "node:path";

16. assistant (2026-07-04T01:52:17.563Z)

Confirmed: this upload-trim help block is NOT yet in the catalogs ? this is a proposed/new key set being translated ahead of landing. So the verification is purely against the stated hard constraints and the linter rules I've now read from the actual test files. The linter rules that matter for `id`:

- **Placeholder parity** (`hygiene.test.ts`): regex `/\\{(\\w+)\\}/g` ? must match en's placeholder set exactly per key.
- **Debug-tag** (`<code>` ban) (`catalog-invariants.test.ts`): `/<\\/(?|kbd|samp|tt|var)\\b/i` and `/<\\/?code\\b/i` banned in all locales (site.ownModel exception doesn't apply here).
- **min_shot_count token** ban.
- Rules #4 (jargon transliteration) and brand-translit are **kn/hi only** ? not enforced on `id`. (The prose asked me to note this, and the audit prompt point 4 says "id kn/hi only".)

Now let me verify each rule against the candidate character-by-character. Let me write out the strings and check them programmatically for the exact regex behaviors.

All programmatic checks pass. Let me now go through each rule adversarially, including the semantic/meaning checks the linter can't do.

****Rule-by-rule adversarial audit:****

****Rule 1 ? Placeholders.**** `message` has exactly `{size}` and `{cap}` (verbatim, curly, in natural Indonesian order: "berukuran {size}" / "batas unggah {cap}"). No other braces anywhere ? the only 4 brace chars are the two placeholder pairs. summary/phone/computer/advanced have zero braces. ****PASS.****

****Rule 2 ? HTML tags.**** Only `**<b>?</b>**` appears (2 open + 2 close = balanced pairs on phone/computer/advanced). No `**<code>/<kbd>/<samp>/<tt>/<var>**` anywhere. summary/message have no

tags. `*<i>*` not present. **PASS.**

Rule 3 ? advanced deliverables. Contains `scripts/chunk\_video.py` as plain text (not in ``<code>``) and `Google Drive`. **PASS.**

Rule 4 ? engine/server/bucket/backend + brand transliteration. This rule is kn/hi-only per both the linter (`for (const loc of ["kn","hi"])`) and the audit prompt. Not applicable to `id`. Even so, none of those jargon words appear. **PASS (N/A).**

Rule 5 ? ICU-safe apostrophe. No straight apostrophe (`'`) anywhere in the id strings ? the translator rephrased to avoid `here's`/`you'd` contractions entirely ("begini caranya", "kalau kamu lebih suka"). No `` before `{` or any special char. **PASS.**

Rule 6 ? meaning, tone, one sentence, real trim methods. Let me verify the semantics closely since this is where an adversarial check bites.

Checking the meaning line-by-line for accuracy and any beginner-trap:

- **message**: "Klip ini berukuran {size}, sedikit melebihi batas unggah {cap}, jadi potong saja menjadi satu atau dua reli terbaikmu lalu unggah versi yang lebih pendek itu." ? "This clip is {size}, slightly over the {cap} upload limit, so just trim to your best rally or two and upload that shorter version." Accurate. One sentence, warm. **PASS.**

- **summary**: "Tenang saja, memotong video hanya butuh sekitar satu menit, begini caranya." ? "No worries, trimming a video only takes about a minute, here's how." Accurate, warm. **PASS.**

- **phone**: "buka klipnya di aplikasi Photos atau Gallery, geser dua pegangan di kedua ujung video untuk menyisakan reli yang kamu mau" ? open in Photos/Gallery, drag the two handles at both ends to keep just the rally you want. Native phone trim (iOS Photos / Android Photos/Gallery) is real. Accurate rendering of "the two handles at the ends." **PASS.**

- **computer**: "buka klipnya di aplikasi Photos pada Windows atau QuickTime Player pada Mac, geser kedua ujungnya ke dalam untuk menyisakan bagian yang kamu mau" ? Windows Photos (real, trims video) + QuickTime Player on Mac (real, Edit > Trim), drag the ends inward. No VLC. **PASS.**

- **advanced**: "kalau kamu lebih suka menyimpan seluruh pertandingan, orang yang mengurus penyiapan bisa membaginya menjadi bagian-bagian lebih kecil dengan scripts/chunk_video.py, atau unggah saja seluruh videonya ke Google Drive." ? keep full match; whoever runs the setup can split it with scripts/chunk_video.py, or upload the whole video to Google Drive. Accurate; "orang yang mengurus penyiapan" is a good rendering of "whoever runs the setup." **PASS.**

One-sentence check: each string is a single sentence. `advanced` has 2 period chars but the first is inside `chunk\_video.py` (the filename), not a sentence boundary ? so it's genuinely one sentence. **PASS.**

No URLs, no "search online," no invented features, no VLC-trim claim. Tone is consistently warm plain Bahasa Indonesia with informal "kamu"/"-mu" (coach-appropriate).

Everything passes. The candidate's `self\_check` claims are all accurate. I'll drop the non-schema `self\_check` field and return the five catalog strings unchanged.
