Transcript

1. user (2026-07-02T06:11:33.381Z)

Hey Claude. Follow my init instructions and tell me how do you rate this repository based on your engineering excellence and quality metrics.

2. assistant (2026-07-02T06:11:33.381Z)

I'll follow the init convention ? read the session handoff and current-state first, then the code map ? before doing the repo quality assessment.

3. assistant (2026-07-02T06:11:33.381Z)

9  
10     # Current state ? updated continuously (see [[working-agreement-checkpoints]])  
11  
12     **Checkpoint:** 2026-06-11 (PR #88 ? **#89 MERGED** ? KhelSutra UI-alpha docs bundle on  
master `34cf26c`). #88  
13     conflicted (branch cut from `feat/async-job-model` pre-squash of #87) ? per  
`scratch/PR88_FIX.md`, recreated as  
14     `docs/khelsutra-plan-2` off post-#87 master keeping 6 paths (UI_PROPOSAL, HOSTING_PLAN,  
UI_ALPHA_EXECUTION_PLAN,  
15     mockups/, DECISIONS **ADR-009**, NEXT_STEPS sync); #88 closed + branch deleted. CI
```

```

green-gated (statusCheckRollup),
16     squash-merged.
17     - **Dropped from #89, preserved for PR-2 as UNCOMMITTED working-tree edits on master:**
(1)
18     `docs/DEFERRED_HARDENING_PLAN.md` "#16 DONE ? MERGED (PR #87)" status hunk (also saved
as
19     `scratch/PR2_deferred_hardening_status.patch`); (2) `docs/UI_ALPHA_EXECUTION_PLAN.md`
working-agreement rewrite
20     (Cowork designs + leaves `scratch/PRn_HANDOFF.md`; **Claude Code executes all git/PR
mechanics** ? ratified
21     2026-06-11). Don't `checkout --` these away; they commit with PR-2.
22     - ?? Next UI-alpha slice = **PR-2 (upload/download)** per
`docs/UI_ALPHA_EXECUTION_PLAN.md`.
23     - ? **SLATE CLEANED (2026-06-11):** indexer = NO open PRs, master==origin (`34cf26c`),
**all 23 stale local branches
24     pruned** (every one mapped to a MERGED PR #62?#87 before `-D`); only `master` remains.
Collector = NO open PRs, on
25     master. Intentional carryovers (NOT mess): the 2 uncommitted PR-2 doc edits (above),
untracked `scratch/` handoffs,
26     untracked `artifacts/rally_tal_gen0/0.1.0/` (Gen-0 bundle, ADR-008). ?? Collector has
a stray uncommitted
27     `.gitignore` edit (adds `artifacts/` ignore w/ ADR-008 comment) ? mega-session
leftover, owner to commit (micro-PR)
28     or fold into the next collector PR.
29
30     **Checkpoint:** 2026-06-10 (GEMINI BATTERY COMPLETE ? full coverage; owner's billing was
fine, postpay active; ALL
31     failures were burst/capacity artifacts). Merged this stretch: **#80** (chunker re-
encode/downscale, from the chip
32     session ? reviewed+merged), **#81** (rescued the chip branch's orphaned run_signals test
via cherry-pick), **#83**
33     (provider: 6 generate attempts exponential backoff+jitter ? saved chunks live), **#84**
(tracked
34     `eval_baselines/gemini_wrapper_2026-06-10.json`). Suite 336 green.
35     - **FINAL QUALITY TABLE (IoU .5 vs human golden labels):**
36     - **Mahadevpura** (clean-ish, 31 rallies): heuristic 0.657 · Gen-0 0.744 · **two-stage
WASB+Gemini refine 0.83**
37     (P .81 R .84, 32 preds) · **full-video wrapper 0.93** (P 1.0 R .87).
38     - **Kushagra** (multi-court, 32 rallies, FULL 7/7 coverage + audio): heuristic 0.157 ·
Gen-0 0.561 ·
39     **wrapper 0.66** (P .69 R .62, ±1.2s; FPs = background-game pickups + one 53s dead-
time merge ? exactly the
40     contrast-metric confound).
41     - **STRATEGY (refined):** clean footage commoditized (0.93 cheap); **multi-court drops
the wrapper to 0.66 = the
42     owned model's ship target** (Gen-0 is 0.10 behind at n=6 ? within corpus-growth
reach). Two-stage refine quality
43     (0.83) < full wrapper on short videos; its value = COST on long academy tapes (only
candidate clips uploaded).
44     Wrapper reliability is genuinely flaky (503 waves all session) ? provider-fallback
architecture is load-bearing.
45     - Artifacts: `output/mahadevpura_gemini_refined.csv`,
`output/MahadevpuraSingles_highlights.mp4` (demo r...

10     # Session handoff ? sports highlight indexer (repo still named badminton-highlight-
indexer; RENAME PENDING) + siblings: sports-data-collector, rally-annotator, sports-obsreport
11
12     **Last updated:** 2026-06-10 (end of the audit ? hardening ? M0 ? Gemini-battery mega-
session; ~25 PRs merged across
13     both repos, #63?#85 indexer + #14?#19 collector). **Read [[current-state]] first** for
blow-by-blow; this is the
14     ~1-page orientation.
15
16     ## You are here (2026-06-10) ? ? HARDENED + M0 SCAFFOLDED + MOAT QUANTIFIED
17     1. **Audit + remediation DONE:** 8-auditor deep audit (all findings adversarially
verified) ? 12-PR hardening sweep
18         (both repos). Master was literally broken (compiler SyntaxError) and is now CI-
guarded (both repos have CI; merges
19         gated on verified-green). Corpus licensing corrected (23 ShuttleSet broadcast rows
demoted; commercial export =
20         owned data only). Suite: indexer 336 green, collector 136 green.
21     2. **ADR-008 ratified (owner):** training in-repo (`training/`) behind a CI-enforced
import wall; featurizer
22         single-sourced in `backend/features/rally_seq.py` (train==serve); serving consumes
versioned ARTIFACT BUNDLES only;
23         ship-gate product-side; **pre-committed repo split** (`sports-temporal-models`) at
Gen-2/second-consumer.
24         "Split driven by productionization, not isolation" (owner's framing).
25     3. **M0 executed:** canonical GT loader (`backend/eval/gt_loader.py` ? closed the two-
loader format fork, round-trip
26         tested vs collector export) . **n=6 owned corpus IN the collector SoR** (262 rallies,
Proprietary) . **Gen-0
27         harness** `python -m training.gen0.harness` (train?LOVO?gate?artifact; v0.1.0 built:
**LOVO 0.626**, floor 0.480
28         passed, sign test 5/6 p=0.109 ? ship=False with honest blockers).
29     4. **Gemini battery DONE (the moat is quantified):** clean-ish Mahadevpura ? heuristic
0.657 / Gen-0 0.744 /
30         two-stage refine 0.83 / **wrapper 0.93**; multi-court Kushagra ? heuristic 0.157 /
Gen-0 0.561 / **wrapper 0.66**
31         (FPS = background-game pickups + dead-time merges, the contrast-metric confound).
**Ship target = beat 0.66 on
32         multi-court**; clean footage is commoditized (serve via Gemini). Baselines committed
in `eval_baselines/`.
33         Demo reel exists: `output/MahadevpuraSingles_highlights.mp4`.
34     5. **Gemini ops (hard-won):** prepaid/cold projects burst-throttle with a MISLEADING
"credits depleted" 429 ? ramp
35         gradually; serial works (`ai_max_workers=1` shipped); chunks re-encode to 1280
(`ai_chunk_scale_width`, PR #80);
36         generate retries = 6 attempts exponential+jitter (PR #83); model = `gemini-flash-
latest` alias (2.5-flash is
37         legacy). 503 capacity waves are real ? provider-fallback registry is load-bearing.
38
39     ## Owned-model architecture (for clarity ? owner asked)
40     **Gen-0/Gen-1 = WASB-substrate + OWNED temporal head.** WASB (frozen, MIT code, C3
checkpoint provenance = ship
41     blocker) produces trajectories; the owned IP = featurizer + head + corpus +
harness/gate. **Gen-2 (Qwen3-VL via
42     ms-swift) = pixels, drops WASB** ? that's the heavyweight step, only entered if the

```

```

lightweight head plateaus below
43     target. Gen-0 trains in MINUTES on the 2070S ($0). Multisport: WASB transfers to TT
(0.909) but not pickleball
44     (0.308) ? per-sport detectors or Gen-2.
45
46     ## ?? Next steps / open owner decisions (mirror of docs/NEXT_STEPS.md ? read that for
detail)
47     1. **Owner mission in progress: grow the golden corpus** (multi-court badminton first;
?3 matches/sport, TT next;
48         adults-only for training; per v...

1     # CODE_MAP.md
2
3     **Purpose:** cold-start navigation map for the badminton-highlight-indexer ? a self-
hosted video ? highlight-reel pipeline (CV/AI rally detection ? SQLite ? ffmpeg stitch) with a
segmenter-agnostic eval/calibration stack, typed config, and per-video observability reporting.
4
5     **Regenerate:** rerun the `build-code-map` workflow (parallel subsystem readers ? this
doc). Re-run after any registry/contract/WSL-interface change, or after a directory restructure
(this revision follows #40).
6
7     ? **2026-06-10 audit-hardening sweep changed several behaviors documented below ? trust
git history over stale lines until the next full regen:** `add_video` is now an **UPSERT** (no
FK-cascade wipe on re-ingest; segmentation is destroy-AFTER-confirm via
`segment_watermarks`/`prune_segments`); detector artifacts are keyed by **video_id**, not
basename; **`indexing.wasb.`** is now a real typed config** (was silently dropped); `timeout_sec`
defaults **1800s** (was 0/hang-forever); SQLite opens with **WAL + busy_timeout**;
```

`match\_intervals` requires real overlap (iou>0); `run\_regression` baseline lives in tracked
`eval\_baselines`/` and **exits 3 on a missing baseline**;

the API validates
`video\_path`/`output\_filename`. New tests: `test\_api\_endpoints`, `test\_compiler`,
`test\_wasb\_runner`, `test\_reingest\_safety`, `test\_detector\_keying`, `test\_config\_wasb`,
`test\_path\_safety`, `test\_reliability\_hardening` (+ collector `test\_licensing\_gate`,
`test\_import\_guard`, `test\_cvat\_robustness`).

```

8
9     **LEGEND**
10    - `@path` = file (always repo-relative)
11    - `:::sym` = symbol (class/func/const) in the nearest preceding `@path`
12    - `->` = dataflow / call / "produces"
13    - `$` = data contract (canonical shape)
14    - `?` = gotcha / footgun
15    - `?` = registry / plugin extension point
16    - `WSL` = runs inside WSL2 conda env, NOT the Windows Python process
17
18    ---
19
20    ## 1. PIPELINE
21
22    ### 1A. Runtime: video file -> highlight reel
23    ```
24    typed config load (built-in defaults -> config.json overrides; absent/parse-fail -> all-

```

```

defaults, never fatal)
25                                     @backend/config/loader.py::load_config ->
@backend/config/models.py::AppConfig
26     -> video_id = MD5(whole file)                                     @backend/utils/hashing.py::compute_video_id
(single shared helper, 64KB chunks; imported by main + all run_*.py ? no more per-entrypoint
copies)
27     -> validate
@backend/pipeline/validators/base.py::registry.run_all_with_context(video_path, global_config)
28         FormatValidator -> ctx['ffprobe_meta'] -> ResolutionFPSValidator -> PTSContinuity
-> SceneCut -> Blur -> Relevance (? ACTUAL registration/exec order ? see
@backend/pipeline/validators/__init__.py)
29         [validation FAIL -> persist status="failed", return early; report STILL emitted
in finally]
30     -> db.add_video(video_id, filepath, status, [r.dict()])
@backend/infrastructure/database.py
31     -> seg_name = req.segmenter or global_config.indexing.default_segmenter (fallback
'motion')
32     -> seg = segmenter_registry.get(seg_name)(db, global_config) ?
@backend/pipeline/segmenters/base.py::segmenter_registry (400 + available list if missing)
33     -> segments = seg.process_video(video_id, video_path, player_pool?, max_frames?)
34         [STOP POINT: segments-only ? predictions now in DB; eval/regression operate here
without stitching]
35     -> finally: emit_indexer_report(...) @backend/reporting/__init__.py (? ALWAYS runs
? even on validation failure / exception; NEVER raises; grafts response["reports"])
36     -> select segment ids -> [(start,end)] (+ stitching padding)
37     -> VideoCompiler.compile_highlights(filepath, time_pairs, ...

1      #!/usr/bin/env python
2      """Run the FULL test suite for the badminton-highlight-indexer.
3
4      A single, discoverable entry point so you (or a reviewer / CI) can verify the
5      whole suite before opening a PR:
6
7      python run_all_tests.py          # full suite, quiet
8      python run_all_tests.py -v       # verbose (passthrough to pytest)
9      python run_all_tests.py -k config # filter by keyword (passthrough)
10     python run_all_tests.py --cov=backend --cov-report=term-missing # coverage
11
12     Anything after the script name is passed straight through to pytest.
13
14     Notes
15     ----
16     - The suite is fully mocked (no GPU, no network, no WSL) and runs offline.
17     - The observability **reporting** tests skip cleanly if the optional ``obsreport``
18       package isn't installed (they use ``pytest.importorskip``). To exercise them too:
19       pip install -e ../sports-obsreport --no-build-isolation
20     - Exit code is pytest's own, so this is CI / pre-PR friendly (0 = all green).
21     """

37. assistant (2026-07-02T06:11:33.383Z)

Init done ? I read the handoff + current-state, ramped on [CODE_MAP.md](docs/CODE_MAP.md), and then gathered fresh evidence rather than relying on memory: ran the full suite (**349 passed, 0 failed, 40s**, fully offline), read the CI workflow, sampled core modules ([metrics.py](backend/eval/metrics.py), [database.py](backend/infrastructure/database.py)), and checked tooling configs and git history (189 commits since 2026-05-18).

Overall: 8/10 ? unusually disciplined for a pre-product solo repo

The headline: this repo's **process and knowledge-management rigor is well above industry norm**, its architecture is genuinely good, and its weaknesses are mostly *known, documented, and deliberately deferred* rather than unknown ? which is itself a quality signal. The one undeniable hole is static analysis: there is no linter, formatter, or type-checker anywhere.

Dimension	Score	Evidence
Architecture & design	9	Five pluggable registry seams (segmenters/providers/validators/sports/annotations), ABC contracts, typed Pydantic config with single-sourced defaults, `PRAGMA user_version` migration ladder, train==serve featurizer behind a CI-enforced import wall
Documentation	9.5	CODE_MAP with data contracts + footgun markers, 9 ADRs, archives/checkpoints, honest negative results recorded (audio E1 rejected, failed heuristics kept)
Process & governance	9	One-PR-per-item, conventional commits, merges gated on verified-green CI, licensing gate that *actually caught* violations (ShuttleSet reclassification), audit?12-PR remediation loop
Eval/ML rigor	9	Honest LOVO, leakage guards, midrank-tie AUC, committed baselines in `eval_baselines/`, regression gate with semantic exit codes, results independently reproduced
Testing	8	349 green in 40s, 51 modules, ~3.9k test lines vs ~8.2k source, negative-path tests (re-ingest safety, path traversal, detector keying)
Code quality	7.5	Sampled modules are clean with *why*-comments; minus for documented copy-paste twins and legacy shims
CI/CD	6.5	Smart two-lane design (import-smoke without GPU stack + full suite), least-privilege, concurrency-cancel ? but only 1 day old and no lint/type/coverage lane
Security	7	API path validation, gitignored secrets, `permissions: contents: read`; pending chat-pasted Gemini key rotation (tracked)
Static analysis tooling	3	No ruff/flake8/black/mypy/pre-commit, nothing in CI
Packaging	4	No `pyproject.toml`, not pip-installable ? deferred with intent in BACKLOG, and it already cost you (it drove the repo-split analysis)

What's genuinely excellent

The **honesty loop** is the standout. Most repos this age have aspirational docs; this one has a CODE_MAP whose header says "trust git history over stale lines," a motion segmenter explicitly

labeled as fabricating random metadata, and an audit trail where the project found its own master broken (the compiler `SyntaxError` that 254 green tests never noticed), fixed it, added CI specifically shaped to catch that class again (``test_import_smoke.py`` does a ``py_compile`` sweep plus a stubbed ``import backend.main``), and wrote the lesson down. The eval culture ? committed baselines, LOVO instead of fit-on-self numbers, a ship-gate that honestly reported ``ship=False`` on its own first model ? is rarer than good code.

The sampled code backs the docs up: `[metrics.py](backend/eval/metrics.py:63)` has a deliberate ``iou > 0.0`` guard with a comment explaining the fabricated-perfect-score failure mode it prevents, deterministic tie-breaking, and pure no-I/O design; `[database.py](backend/infrastructure/database.py:73)` has a versioned migration ladder with test-asserted schema version and graceful WAL degradation.

Where it loses points

1. ****No static analysis at all**** ? the biggest gap, and the cheapest to close. The suite output itself shows the cost: 15 Pydantic deprecation warnings (``dict()`` ? ``model_dump()`` at `[main.py:168](backend/main.py:168)`, 157, 162, 221) that a ruff lane would have flagged. A ``ruff check`` + ``ruff format --check`` job in CI is an afternoon of work.
2. ****Documented-but-live duplication**** ? ``tracknet_hybrid``/``wasb_hybrid`` are copy-paste twins where "any P3/P4 fix must be applied to BOTH," ``_wsl_bash`` is duplicated across runners, and padding constants are duplicated between the compiler and rally_slicer. The `CODE_MAP` flags all of these, but flags don't prevent drift.
3. ****Legacy tolerance footguns**** ? ``extra='allow'`` on `AppConfig` keeps typo'd config keys silently, the dict-compat ``get()`` shim and the dict-returning legacy ``load_config`` are still load-bearing, and two incompatible GT CSV conventions coexist (mitigated by the canonical ``gt_loader``, but the old loaders still exist).
4. ****Small hygiene nits****: `[.coveragerc](.coveragerc)` omits paths that no longer exist (``backend/indexer/motion.py``, ``backend/validators/*`` ? pre-restructure layout), and ``TEST_RUN_SUMMARY.md`` is a tracked point-in-time artifact at the root.
5. ****CI is young**** ? the repo ran its first ~3 weeks without CI, and the coverage-inversion lesson (tests dense where risk was low) was only corrected in the 2026-06-10 sweep. Current state is good; the track record is short.

If you want to convert 8 ? 9

In priority order: (1) a ruff + mypy CI lane with the two-line ``dict()`` fixes, (2) ``pyproject.toml`` packaging, (3) collapse the hybrid-segmenter twins into one parameterized base, (4) flip ``extra='allow'`` to ``forbid`` once the legacy shim retires. All four are already implicitly tracked in your own BACKLOG/deferred-hardening docs ? which is rather the point: this repo knows where its bodies are buried, and that's what makes it an 8 rather than a 6.5 with the same code.

Happy to turn any of these into a PR-sized work item if you want ? say the word (per the workflow agreement, I won't start one unprompted).

38. user (2026-07-02T06:11:33.384Z)

I want to go 8 -> 9! So please help me with that! Can you make an itemized list of AIs you can take up and once I approve feel free to make individual PRs and go on merging.

39. assistant (2026-07-02T06:11:33.384Z)

Excellent ? here's the itemized list. I've ordered it as the execution sequence (small, de-risking wins first; the structural refactor near the end once the new CI lanes can guard it). Each is one branch ? one PR ? merge-on-green, per the repo convention.

Proposed action items (8 ? 9)

****Quick wins****

1. ****AI-1 · Repo hygiene**** (S, no risk) ? Fix the stale `[.coveragerc](.coveragerc)` omit paths (``backend/indexer/``, ``backend/validators/`` no longer exist post-restructure; repoint to their

current `backend/pipeline/` equivalents). Untrack `TEST\_RUN\_SUMMARY.md` (point-in-time artifact) and gitignore it ? after checking nothing references it. Also sweep the stale pre-restructure `\_\_pycache\_\_` dirs locally (not a PR concern, just dirt).

2. ****AI-2 · Pydantic v2 cleanup**** (S, low risk) ? Replace the four deprecated `.dict()` calls in [main.py](backend/main.py:157) with `model\_dump()`, plus a grep for any other Pydantic v1 idioms (`json()`, `parse\_obj()`). Kills the 15 deprecation warnings in the suite; removes a v3 time bomb.

****CI quality lanes**** (each becomes a new job in [ci.yml](.github/workflows/ci.yml))

3. ****AI-3 · Ruff lint lane**** (M, low-med risk) ? Add `ruff.toml` (target py38 to match the stated floor; pragmatic ruleset: pyflakes/pycodestyle errors + import sorting + bugbear + pyupgrade, with per-file-ignores where the code is deliberate, e.g. CLI `print`s). Fix all violations (mostly auto-fixable; diff is wide but mechanical), add a `lint` CI job. ****No `ruff format` enforcement**** ? a whole-repo reformat would be a noise bomb; lint only.

4. ****AI-4 · Mypy lane**** (M, medium risk on scope) ? Lenient baseline config (`ignore\_missing\_imports`, exclude the WSL-only `wasb\_infer.py` if needed), fix the *real* errors it surfaces, add CI job. Scoped to land green now and ratchet stricter later ? not a typing crusade.

5. ****AI-5 · Coverage report in CI**** (S, low risk) ? Run the full-suite job with `--cov`, print the term-missing summary, and set a conservative `fail-under` floor just below current measured coverage so it can only ratchet up. Directly addresses the historical coverage-inversion blind spot.

****Structural****

6. ****AI-6 · Config unknown-key warning**** (S-M, low risk) ? The loader currently keeps typo'd top-level keys silently (`extra='allow'`) and nested sections silently **drop** unknown keys. Add a loud `[CONFIG WARNING] unknown keys: ?` at load time for both, preserving the never-fatal contract. The full `extra='forbid'` flip stays deferred until the deprecated `gemini\_` aliases retire (that's a behavior decision, not a cleanup).

7. ****AI-7 · Collapse the hybrid-segmenter twins**** (M-L, medium risk ? the big one) ? Extract a shared trajectory-hybrid base; `tracknet\_hybrid`/`wasb\_hybrid` become thin subclasses (runner + config section + params). Resolves the documented `shot\_count` copy-paste drift deliberately (align both to the safe is-None short-circuit), dedupes `\_wsl\_bash` into the detectors layer, and adds equivalence tests so the twins can never drift again. Goes last so ruff/mypy/coverage lanes guard it.

8. ****AI-8 · `pyproject.toml` packaging**** (M, medium risk) ? PEP 621 metadata, setuptools backend, dependencies sourced dynamically from `requirements.txt` (single source). Package `backend` ****only**** ? excluding `training/` from the wheel reinforces ADR-008's import wall. One wrinkle: the existing setup.py is a bootstrap script, not setuptools ? it must be renamed (e.g. `scripts/setup\_env.py`) or `pip install` would execute it with side effects; I'll update doc references. Package name stays `badminton-highlight-indexer` for now ? trivially renamed when the repo rename lands, no point prejudging it.

****Execution protocol:**** sequential, one PR at a time off fresh master; suite green locally before push; merge gated on `statusCheckRollup == SUCCESS` (the #75/#76 lesson); squash-merge + branch delete; re-check PR state before any follow-up push (the #80 lesson). Your two uncommitted PR-2 doc edits on master stay untouched throughout ? selective `git add` only, never `-A``.

1      # Test Run Diagnosis & Optimizations Summary
2
3      > **Historical note:** This is a point-in-time diagnosis from a May 2026 local test run,
4      > written *before* the layered-directory restructure (PR #40). Path references below
5      > reflect the old flat layout (e.g. a single `segmenter.py`, now the
6      > `backend/pipeline/segmenters/` package). The diagnostic findings and optimization
7      > lessons remain valid; treat the file paths and install commands as historical.
8
```

```

9      *Date: May 18, 2026*
10     *Target File: `C:\Users\avidu\Videos\LargeTestVideo.MP4` (HEVC H.265, Size: ~11.5 GB)*
11
12     This summary details the findings, architectural lessons, and performance optimizations
13     implemented during today's local test run of the Badminton Highlight & Rally Indexer.
14     ---
15
16     ## ? Why the Initial Test Run Blocked (and How We Resolved It)
17
18     During the raw test execution on the 11.5 GB video stream, the system hit three
19     distinct, high-impact constraints. We fully diagnosed, optimized, and hardened the pipelines to
20     address them:
21
22     ### 1. The Keyframe Extraction Gap (H.265 Stream Header Parsing)
23     * **The Issue**: The `PTSContinuityValidator` check initially failed with `[FAIL] No
24     keyframes could be extracted`.
25     * **The Root Cause**: GoPro raw H.265/HEVC encodes use **Gradual Decoder Refresh
26     (GDR)** or **Clean Random Access (CRA)** keyframe configurations. Standard FFmpeg frame-level
27     decoding with `-skip_frame nokey` relies on hardware/software decoders which failed to flag
28     standard keyframe structures, returning empty outputs.
29     * **The Optimization**: We changed the validator to query packet indexes
30     (`packet=pts_time,flags`) at the **container demuxer level** instead of full frame decoding.
31     Because packet flags (e.g. `K__`) are written directly to container headers, this bypasses the
32     video decoder entirely. It runs **100x faster** and is 100% robust across HEVC containers!
33
34     ### 2. The Blurriness Quality Barrier (Indoor Arena Low-Light Noise)
35     * **The Issue**: The video failed the focus threshold check with a sharpness score of
36     `35.3` (minimum threshold was `100.0`).
37     * **The Root Cause**: High-speed action footage in typical indoor badminton
38     environments suffers from high-speed motion blur and ISO sensor noise, reducing the computed
39     Laplacian variance.
40     * **The Fix**: We lowered the `min_blur_threshold` default inside `config.json` to
41     `20.0` so that raw fast-moving arena footage passes quality checks cleanly.
42
43     ### 3. OpenCV Seeking Performance Bottleneck

`docs/archives/` already holds loose terminal-state docs at top level ? perfect fit. Checking the archive index, then making the edits on a branch.

57. assistant (2026-07-02T06:11:33.385Z)

```
[external_agent_tool_result]
1      # archives/
2
3      Umbrella directory for all **historical and completed** material.
4
5      ## Live vs Historical
6      - **Live docs** (for ramp-up, constant updates, and current work) live at the top level
of `docs/`.
7      - Everything here is no longer the primary source of truth. It is kept for context,
```

```

decision history, and regression detection.
8
9     ## Classification inside archives/
10    - `past_projects/` ? Completed small tech debt, starter projects, or low-regret
initiatives (e.g. the original low-regret moves + scaffolding work). These are "past" once they
reach a terminal state.
11    - `decisions/` ? Historical ADRs and major architectural decisions.
12    - `research/` ? Completed or superseded research notes and plans.
13    - `checkpoints/` ? Snapshots of major project states (especially useful for detecting
regressions in quality, priorities, or baselines over time as we do quality iterations).
14    - Other one-off audits, etc.
15
16    ## Archival Rule
17    Only move something into `archives/` (or its subdirectories) when the work is in a clear
**terminal state**:
18    - DONE
19    - COMPLETED
20    - REJECTED
21
22    Never archive in-flight or pending work.
23
24    When archiving a project/phase:
25    1. Ensure the main document has an explicit `**STATUS: COMPLETED**` (or DONE/REJECTED)
header at the top.
26    2. Link back to the current living documents in `../` (e.g.
`COMMERCIAL_READINESS_REVIEW.md`, `BACKLOG.md`).
27    3. For regression detection value, consider adding a dated entry under `checkpoints/`.
28
29    See `past_projects/README.md` for the specific guidance on that category.
30

```

[external_agent_tool_result]
145         "end_padding": 0.5,
146         "use_cache": false,
147         "min_shot_count": 1
148     }
149 }
150 ```
151
152     Notable knobs:
153     * `validation.min_blur_threshold` ? defaults to `20.0` (deliberately permissive for
noisy indoor-arena GoPro footage; see `TEST_RUN_SUMMARY.md` for why).
154     * `indexing.default_segmenter` ? `yolo_hybrid` | `gemini` | `motion`.
155     * `indexing.use_gpu` ? when true and CUDA is available, YOLO runs on GPU.
156     * `indexing.yolo_velocity_threshold` ? fraction of frame width per second; lower
values catch slower play, higher values are stricter about what counts as "action".
157     * `indexing.yolo_frame_skip` ? process every Nth frame during YOLO tracking. `3` at 30
fps ? 10 samples/sec.
158     * `indexing.chunk_duration` / `chunk_overlap` ? how to split long videos for the YOLO
phase.
159     * `indexing.ai_handoff_padding` ? seconds of slack added around each YOLO candidate
window before sending to the AI provider.
[/external_agent_tool_result]

```

60. assistant (2026-07-02T06:11:33.385Z)

Archive policy fits ("Other one-off audits" at top level). Executing AI-1 now: branch, move the doc, fix `.coveragerc`, update the README pointer.

72. assistant (2026-07-02T06:11:33.386Z)

```
[external_agent_tool_call: PowerShell]
description: Commit hygiene changes and push branch
command: git add .coveragerc README.md && git commit -m '@'
chore: repo hygiene - fix stale .coveragerc paths, archive TEST_RUN_SUMMARY
```

- .coveragerc still pointed at pre-#40 layout paths (backend/indexer/, backend/validators/) that no longer exist; repoint to the current backend/pipeline/ layout, keep validators/base.py counted (it has a dedicated suite), and stop omitting backend/main.py now that the TestClient suites (test_api_endpoints, test_async_jobs) cover it.
- TEST_RUN_SUMMARY.md is a point-in-time May-2026 diagnosis already marked historical in its header; move it to docs/archives/ per the archive policy ("one-off audits" live at archives top level) and update the README pointer.

```

[external_agent_tool_call: PowerShell]
description: Create PR for repo hygiene changes
command: gh pr create --title "chore: repo hygiene - fix stale .coveragerc paths, archive
TEST_RUN_SUMMARY" --body @'
**AI-1 of the approved 8->9 quality sweep** (7 sequential PRs: hygiene, pydantic v2 cleanup,
ruff lane, mypy lane, coverage floor, config unknown-key warning, hybrid-twin collapse).
```

What

- `.coveragerc` still pointed at pre-#40 layout paths (``backend/indexer/motion.py``, ``backend/validators/*``) that no longer exist, so the omit list was a silent no-op. Repointed to the current ``backend/pipeline/`` layout, listing the six concrete validators explicitly so ``validators/base.py`` (which has a dedicated unit suite) stays counted. Also stopped omitting ``backend/main.py`` - it now has real `TestClient` coverage (``test_api_endpoints``, ``test_async_jobs``), so omitting it just understates the metric ahead of the coverage-floor lane (AI-5).
- `TEST_RUN_SUMMARY.md` is a point-in-time May-2026 diagnosis already marked historical in its own header; moved to ``docs/archives/`` per the archive policy (one-off audits at archives top level) and updated the README pointer.

Verification

- Full suite green locally before this PR (349 passed, 40s).
- No code paths touched; doc move + coverage config only.

description: Commit, push, and open PR for pydantic cleanup
command: git add backend/main.py && git commit -m '@'
fix: replace deprecated pydantic .dict() with model_dump()
```

All 7 call sites were [r.dict() for r in val_results] on ValidationResult (pydantic v2 BaseModel). .dict() is deprecated since pydantic 2.0 and is removed in v3 - the suite emitted 15 PydanticDeprecatedSince20 warnings. Output is byte-identical (model_dump() is the direct successor); suite green with zero warnings after the change.

Co-Authored-By: Claude Fable 5 <noreply@anthropic.com>
'@ && git push -u origin fix/pydantic-v2-model-dump && gh pr create --title "fix: replace deprecated pydantic .dict() with model_dump()" --body @'
AI-2 of the approved 8->9 quality sweep.

What

Replaces the 7 deprecated `.dict()` calls in `backend/main.py` (all `[r.dict() for r in val_results]` on `ValidationResult`) with `model_dump()`, the direct v2 successor. `.dict()` is removed in pydantic v3, so this was a time bomb on any future dependency bump.

Scope was grepped repo-wide for the other v1 idioms (`.json()` on models, `parse_obj`, `parse_raw`, v1 `@validator`, `construct`) - none exist; the `.json()` hits in tests are `httpx.Response.json()`, not pydantic.

Verification

- `python run_all_tests.py`: **349 passed, 0 warnings** (was 349 passed + 15 PydanticDeprecatedSince20 warnings).

1     """Low-level moving-object detectors that run outside the main Python process.
2
3     Houses:
4     - DetectorRunner ABC (the seam for WSL vs future Linux-native trajectory detectors).
5     - TrackNetRunner / WasbRunner (current WSL adapters; both inherit DetectorRunner).
6     - rally_gate (pure post-filter, no WSL).
7     - wasb_infer.py (the actual code that runs *inside* the WSL wasb env).
8
9     The ABC de-risks the WSL dependency (low-regret item 6 continuation): new
10    runners can be added without changing hybrid segmenters or windowing logic.
11    See base.py docstring for the exact contract + "how to add a runner" guide.
12
13    Keeping the heavy TF/torch deps quarantined in WSL (or a native subprocess)
14    is deliberate: the main project env stays free of them.
15    """

description: Commit ruff lane changes and push branch
command: git add ruff.toml .github/workflows/ci.yml backend tests training
run_process_and_stitch.py setup.py && git commit -m '@'
ci: add ruff lint lane + fix all violations; remove never-compiled flyer stub

```

Lane = ruff defaults (pyflakes + pycodestyle errors) + W + B, target py38, lint-only (no format enforcement). New `lint` CI job doubles as the repo-wide syntax guard - the py_compile smoke sweep only covers backend/.

- scripts/generate_khelacharya_flyer.py REMOVED: line 39 is a literal AI-placeholder sentence; the file has never compiled since it was committed (SyntaxError on import), invisible because no gate swept scripts/. Same breakage class as the 7fbbeb0 compiler incident.
- Auto-fixed (152): unused imports, placeholder f-strings, blank-line whitespace.
- Manual (42): semicolon/one-line-statement splits (incl. the rally_seq featurizer - pure line splits, suite-verified); exception chaining (raise ... from e) in main/compiler/segmenter-registry; B023 loop-var capture in calibration.py LOVO bound via default arg (latent trap, not a live bug - closure was consumed within the iteration); dead locals dropped (gemini compression leftovers, compiler subprocess results); l -> lv/fv/ln renames; pytest.raises(ValidationError) instead of blind Exception in reliability tests; assert False -> pytest.raises; DetectorRunner re-export made explicit via __all__.
- Deferred with intent (documented in ruff.toml): I (import-sort) and UP (pyupgrade) - large mechanical diffs, separate PR if wanted.

Suite: 349 green before and after.

```

```
[external_agent_tool_call: PowerShell]
description: Open PR for ruff lint lane
command: gh pr create --title "ci: ruff lint lane + fix all violations; remove never-compiled
flyer stub" --body @'
**AI-3 of the approved 8->9 quality sweep.**
```

Headline finding

`scripts/generate\_khelacharya\_flyer.py` has **never compiled** since it was committed: its line 39 is a literal AI-placeholder sentence ("[Full script body would be inserted here in a real call - truncated...]"). Nothing ever swept `scripts/` (the import-smoke py_compile sweep covers `backend/` only), so it sat broken and invisible - the same class as the 7fbbeb0 compiler incident. **Removed** (the real script body never existed in git, so there is nothing to fix). The new lint lane now syntax-checks every tracked `.py` repo-wide, closing this hole permanently.

The lane

- `ruff.toml`: ruff defaults (pyflakes + pycodestyle errors) + **W** (whitespace) + **B** (bugbear), `target-version = py38` (the stated floor). Lint-only - **no** `ruff format` (a whole-repo reformat would bury blame for zero behavior value). `scratch/` excluded (throwaway debug scripts, same as pytest.ini). E402 per-file-ignored for the three entrypoints where setup-before-import order is load-bearing.
- New `lint` CI job (runs in ~20s, parallel to the other two lanes).
- **Deferred with intent** (documented in ruff.toml): **I** (import-sort, 106 files) and **UP** (pyupgrade, ~500 hits) - large mechanical diffs, separate PR if wanted.

Violations fixed (194 total: 152 auto, 42 manual)

- Auto: 43 dead imports, placeholder f-strings, ~180 blank-line-whitespace.
- Exception chaining (`raise ... from e`): main.py HTTPException handlers, compiler ffmpeg errors, segmenter-registry name resolution.
- **B023** in `calibration.py` **LOVO**: `pooled\_score` closed over the loop variable `others` - bound via default arg. Latent trap rather than live bug (the closure is consumed inside the iteration today), but this is the exact pattern that silently breaks under refactoring.

- Semicolon-joined statements split (incl. `backend/features/rally\_seq.py` - the train==serve featurizer; pure line splits, suite-verified).
- Dead locals dropped: gemini.py compression-era leftovers, compiler subprocess results.
- Tests: `pytest.raises(ValidationError)` replaces blind `pytest.raises(Exception)` (B017); `assert False` -> `pytest.raises` (B011); `l` -> `lv`/`fv`/`ln` renames (E741); unused `db` = bindings dropped (F841).
- `DetectorRunner` re-export made explicit via `\_\_all\_\_`.

Verification

- `ruff check .` - All checks passed.
- `python run\_all\_tests.py` - **349 passed** before and after every step.

-m '@'
ci: add mypy lane (lenient green baseline + explicit quarantine list)
```

Config (mypy.ini): ignore_missing_imports + explicit_package_bases
(backend/ is a namespace package - no root __init__.py). Seven modules
quarantined with documented reasons: main.py (Optional module globals,
fixed properly by the deferred app-factory refactor), the five hybrid/
legacy segmenters (slated for the AI-7 twin collapse), and the segmenter
registry (cls(None, {})) probe needs a Protocol). Ratchet rule in the
header: try removing an entry whenever you touch a quarantined module.

Fixed the 18 errors outside the quarantine (all annotation-level, zero
behavior change):

- implicit-Optional defaults made explicit (paths, video, hit_detector,
wasb_infer, distill_local) - also resolves the int|None -> int
arg-type complaints in gemini_refine via extract_video_chunk
- calibrate_local: windows dict-list no longer rebound to tuple-list
(mypy infers from first binding)
- gt_loader: assert narrows the Optional column tuple (every branch
above assigns it); harness/validators: Dict[str, Any] annotations
- distill_local: assert final.w is not None after fit()

CI job installs typed core deps (pydantic/fastapi/numpy/...) so mypy
checks against real signatures instead of Any-stubs.

Verification: mypy green (75 files), ruff green, suite 349 green.

Co-Authored-By: Claude Fable 5 <noreply@anthropic.com>
'@ && git push -u origin ci/mypy-lane && gh pr create --title "ci: add mypy lane (lenient green
baseline + explicit quarantine list)" --body @'
AI-4 of the approved 8->9 quality sweep.

The lane

- `mypy.ini`: lenient baseline - `ignore\_missing\_imports` + `explicit\_package\_bases` (backend/ is a namespace package). ****Green today**** across all 75 source files.
- Honesty mechanism: instead of disabling error codes globally (which would make the gate theater), the 7 known-loose modules are ****quarantined per-module with documented reasons**** - main.py (Optional globals -> deferred app-factory refactor), the hybrid/legacy segmenters (-> AI-7 twin collapse), the registry probe pattern. The header states the ratchet rule: try removing an entry whenever you touch a quarantined module.
- CI job installs the typed core deps (pydantic/fastapi/numpy/...) so the check runs against real signatures, matching what local runs see.

Real fixes outside the quarantine (18 errors, all annotation-level)

- Implicit-`Optional` parameter defaults made explicit across 5 modules; fixing `extract\_video\_chunk` also resolved two downstream `int | None` arg-type errors in `gemini\_refine`.
- `calibrate\_local.make\_local\_predict\_fn`: stopped rebinding the action-window dict-list to a tuple-list (separate name; same values).
- `gt\_loader`: assert-narrowed the Optional column tuple; `harness.report\_to\_dict` + validator context got `Dict[str, Any]` annotations; `distill\_local` asserts `final.w` is set after `fit()`.

No behavior change anywhere - annotations, asserts on invariants that already held, and one variable rename.

Verification

- `mypy backend training` - Success, no issues in 75 files.
- `ruff check .` - clean. `python run\_all\_tests.py` - ****349 passed****.

description: Commit and open PR for DB connection fix
command: git add backend/infrastructure/database.py && git commit -m '@'
fix(db): actually close SQLite connections (transaction scope != close)

`with sqlite3.connect(...)` is only a commit/rollback scope - it never closes the connection, so every Database method leaked its connection to GC (340 ResourceWarnings across one suite run; lingering file handles on the WAL sidecars under Windows). New `\_connect()` context manager preserves the exact transaction semantics (`with conn:` inside) and closes in `finally`; all 24 internal call sites switched mechanically. `\_get\_connection()` kept as-is for direct test use.

Surfaced while wiring the coverage lane (AI-5) - coverage's gc made the warnings visible. Suite: 349 green, warnings 340 -> 4.

Co-Authored-By: Claude Fable 5 <noreply@anthropic.com>
'@ && git push -u origin fix/db-connection-close && gh pr create --title "fix(db): actually close SQLite connections (transaction scope != close)" --body '@'
Surfaced by AI-5 prep (coverage instrumentation made the GC-time warnings visible); shipped as its own micro-PR so the new coverage lane starts with clean logs.

What

`with sqlite3.connect(...)` is a commit/rollback scope only - it **never closes**. Every `Database` method therefore leaked its connection to GC: 340 `ResourceWarning: unclosed database` per suite run, and on Windows that means file handles lingering on the WAL `-wal`/`-shm` sidecars.

Fix: a `\_connect()` contextmanager that wraps the same transaction scope (`with conn:`) and closes in `finally`. All 24 internal call sites switched mechanically (`\_get\_connection` -> `\_connect`); `\_get\_connection()` itself is unchanged and still used directly by a few tests that manage their own scope.

Verification

- Suite: ****349 green****; ResourceWarnings under coverage: ****340 -> 4**** (the rest are tests using `\_get\_connection` directly).
- ruff + mypy clean on the touched file.
- Transaction semantics preserved exactly - commit-on-success/rollback-on-exception behavior is the same CM as before, just with a close around it.

description: Commit coverage step, open PR, watch its CI
```

```
command: git add .github/workflows/ci.yml && git commit -m '@'
ci: run the full suite with coverage (report only; floor follows)
```

Adds pytest-cov + --cov=backend --cov=training to the full-suite lane.
Report-only first: the floor must be calibrated against THIS lane
(obsreport absent -> reporting tests skip -> lower total than local).
The follow-up commit pins --cov-fail-under just below the CI-measured
number so coverage can only ratchet up.

```
Co-Authored-By: Claude Fable 5 <noreply@anthropic.com>
'@ && git push -u origin ci/coverage-floor && gh pr create --title "ci: coverage floor on the
full-suite lane (ratchet-only)" --body '@'
**AI-5 of the approved 8->9 quality sweep.**
```

What

The full-suite CI lane now measures coverage (`--cov=backend --cov=training`) and - after this PR's second commit - enforces a `--cov-fail-under` floor set just below the CI-measured baseline, so coverage can only ratchet upward. This directly addresses the audit's historical coverage-inversion blind spot (tests dense where risk was low).

Calibration protocol (why two commits)

CI runs without the private soft-dep `obsreport`, so the reporting tests skip there and CI's total runs lower than local (local with obsreport: **73%**). Commit 1 is report-only; the floor in commit 2 is read off this PR's own CI run rather than guessed from local.

description: Commit, push, open PR 96 and watch CI
command: git add backend/config/loader.py tests/test_config.py && git commit -m '@'
feat(config): warn loudly on unknown config.json keys (dotted paths)
```

Two silent failure modes existed: a typo'd TOP-LEVEL key is kept by AppConfig extra='allow' but never read by typed code; a typo'd key INSIDE a section is silently dropped by Pydantic. Either way the knob becomes a no-op with zero feedback (the audit's silently-dropped-config class - the indexing.wasb block was unconfigurable for weeks this way).

load_config now walks file_data against the model tree (recurring into BaseModel-typed sections, so nested-of-nested like validation.relevance is covered) and logs one [CONFIG WARNING] listing every unrecognized dotted path. Never-fatal contract preserved; the repo's own config.json is fully recognized (verified - no warning on a default run).

Full extra='forbid' stays deferred until the legacy gemini_* aliases retire (behavior decision, tracked in BACKLOG).

Suite: 351 green (2 new tests).

```
Co-Authored-By: Claude Fable 5 <noreply@anthropic.com>
'@ && git push -u origin feat/config-unknown-key-warning && gh pr create --title "feat(config):
warn loudly on unknown config.json keys (dotted paths)" --body '@'
**AI-6 of the approved 8->9 quality sweep.**
```

What

`load\_config` now compares the parsed `config.json` against the typed model tree and emits a single `[CONFIG WARNING]` listing every unrecognized key as a dotted path (`indexing.velocity\_threshold`, `validation.relevance.unknown\_gate`, ...).

Why

Two silent failure modes: top-level typos are kept by `extra="allow"` but never read; section-level typos are silently **dropped** by Pydantic. Both make a knob a no-op with zero feedback - the exact class the audit flagged (the whole `indexing.wasb` block was unconfigurable this way before #66).

Notes

- Never-fatal contract preserved (warning only); the repo's own `config.json` is fully recognized - verified no warning fires on a default run.
- The full `extra="forbid"` flip stays deferred until the legacy `gemini\_\*` aliases retire - that's a behavior decision, not a cleanup.

Verification

- 2 new tests (typo'd keys at all three nesting levels warn; clean config does not). Suite ****351 green****; ruff + mypy clean.

1      """WASB-based hybrid play segmenter.
2
3      Identical three-phase shape to TrackNetHybridSegmenter, but Phase 2 uses **WASB**
4      (nttcom/WASB-SBDT, MIT) shuttle-trajectory detection via WSL2
5      (backend/detectors/wasb_runner.py) instead of TrackNetV4. WASB ships pretrained
6      badminton weights and runs today, so this is the live shuttle-motion substrate.
7      Phase 3 (AI semantic boundaries) and Phase 4 (DB) are shared with the other hybrids.
8
9      For the per-video *calibration* goal we mainly use Phase 2 (trajectory -> candidate
10     windows); the windowing thresholds (velocity_thresh / merge_gap / min_window_duration)
11     are what get tuned against golden rally labels.
12     """

1     """TrackNet-based hybrid play segmenter.
2
3     Same three-phase shape as HybridYoloSegmenter, but Phase 2 (candidate
4     generation) uses a TrackNetV4 *shuttle* trajectory instead of YOLO *person*
5     motion. TrackNet runs in WSL2 (see backend/detectors/tracknet_runner.py and
6     docs/DECISIONS.md ADR-001); the shuttle trajectory is converted into candidate
7     rally windows, which are then handed to the AI provider for semantic boundary
8     confirmation (Phase 3) and written to the DB (Phase 4).
9
10    Rationale: a tiny, fast, motion-blurred shuttle is exactly what general
11    detectors miss; a purpose-built trajectory model localises it far more
12    precisely, giving cleaner candidate rallies than person-velocity heuristics.
13    """

[external_agent_tool_result]
1     """Abstract base for detector runners (TrackNet, WASB, future native, etc.).
2
3     This completes the Detector Runner Abstraction (low-regret item 6 continuation / item 1
4     of the post-observability re-prioritization) to de-risk the WSL/conda dependency for
5     the high-accuracy shuttle trajectory substrate used by tracknet_hybrid / wasb_hybrid.
6
7     The ABC lets us:
8     - Keep the current WSL adapters working unchanged for Windows users.
9     - Swap in (or A/B test) a Linux-native implementation later with zero changes to
10    the hybrid segmenters or the model-agnostic windowing brain.
11    - Provide a single place to evolve the healthcheck / error contract and thread
12    detector readiness into per-video reports.
13
14    Contract (deliberately matches what the concrete runners + hybrids + tests already did):
15    - run_predict(video_win_path: str, output_win_dir: str) -> Optional[str]
16      Run detector, return the Windows-side path to the produced trajectory CSV
17      (e.g. ".../clip_predict.csv" or ".../clip_wasb.csv"), or None on any failure.
18      The caller (hybrid) is responsible for output dir; impls may stage the video
19      into WSL fs for perf.
20
21    - healthcheck() -> tuple[bool, str]
22      Return (ok, message). Never raises. "ok" decides whether to proceed to run_predict.
23      Message is logged (and can be surfaced to reports or UX in future).
24      Intended to be cheap (env existence, import, GPU visibility, weights present).
25
26    Existing behavior is 100% preserved. The only additions are the inheritance and
27    the explicit common type for future implementers.
28
29    How to add a new runner (for docs / future contributors):
30    1. Subclass DetectorRunner in a new or existing module under pipeline/detectors/.
31    2. Implement run_predict and healthcheck (return (bool, str) tuple).
32    3. If it produces the same CSV schema (Frame,Visibility,X,Y), reuse or re-export
33       TrackNetRunner.parse_trajectory_csv and .trajectory_to_action_windows (they are
34       deliberately static and model-agnostic). If the new detector needs different
35       windowing, it can implement its own or we generalize later.

```

```

36     4. Lazy-import heavy native deps inside the methods (so importing the segmenter
37       registry never pulls torch/tf on a machine that doesn't have them).
38     5. Update the two hybrid segmenters (or introduce a detector= choice) to accept
39       DetectorRunner instances (they already do the right thing via duck-typing + the
40       type hints we add here).
41     6. Add unit tests that exercise the contract (isinstance, healthcheck shape, run
42       returns str|None) using mocks for the external bits ? see test_tracknet_runner.py.
43     7. No change to eval/calibration code paths (they consume the CSV + the static
44       windowing helpers directly).
45
46     Optional Linux-native path (the main de-risk goal):
47     A LinuxNativeRunner (or ONNXRunner) would:
48     - Skip all wsl / _stage / conda activate.
49     - Load weights locally (torch or onnx) or call a native binary.
50     - Write the exact same CSV format so trajectory_to_action_windows works verbatim.
51     - healthcheck can just check "weights file exists and torch importable + CUDA?".
52     This removes the WSL requirement for Linux users / future SaaS workers while
53     keeping the exact same candidate quality characteristics (or better, once native
54     weights are available).
55
56     Error surfacing into reports:
57     The healthcheck message is already logged by the hybrids on failure. The reporting
58     harvest sees the outcome as "0 candidates" + detector name. When we wire richer
59     segmenter Results (or pass detector_health into emit_indexer_report context), the
60     (ok, msg) can be recorded explicitly under segmentation.details or a new detector
61     stage. The ABC makes that future change local to one place.
62
63     See also:
64     - backend/pipeline/segmenters/{tracknet_hybrid,wasb_hybrid}.py (the two callers)
65     - tests/test_tracknet_runner.py (contract + pure logic tests; hybrids mock the runner)
66     - docs/T...

```
107     ### 2.1 Segmenters (under pipeline/segmenters) ?
108     - `@backend/pipeline/segmenters/base.py`
109     - `::BasePlaySegmenter` ABC ? `__init__(db, config)`; abstract
`name`, `description`, `process_video`. $ `process_video(video_id, video_path, player_pool=None,
max_frames=None) -> List[dict{id, start_time, end_time, duration, metadata}]`.
110     - `::SegmenterRegistry`, `::segmenter_registry` (singleton). ? **register a new
segmenter**: subclass `BasePlaySegmenter`, call `segmenter_registry.register(MyCls)` at module
bottom, AND import the module in `@backend/pipeline/segmenters/__init__.py` (registration is an
IMPORT side-effect). ? `register()` builds `cls(None, {})` just to read `name` ->
name/description/`__init__` MUST NOT touch `self.db`/`self.config`. ? `list_available()` re-
instantiates + swallows exceptions into "No description available." (a throwing `description` is
masked).
111     - `@backend/pipeline/segmenters/__init__.py` ? imports all 5
(`motion, gemini, yolo_hybrid, tracknet_hybrid, wasb_hybrid`) = the de-facto registration manifest;
re-exports them + `segmenter_registry` via `__all__`.
112     - `@backend/pipeline/segmenters/wasb_hybrid.py::WasbHybridSegmenter` (name
`'wasb_hybrid'`) ? WSL WASB substrate (MIT; ships pretrained badminton weights, the LIVE
default). Imports `WasbRunner`/`WasbConfig` from `pipeline/detectors/wasb_runner`. Config
`indexing.wasb.velocity_threshold(0.02)` + shared
`dead_time_merge_gap/min_action_window_duration/ai_handoff_padding/ai_max_workers`. ? whole-
video single pass; reuses YOLO-named keys `log_yolo_candidates/store_yolo_candidates`; needs
`{PROVIDER}_API_KEY` (missing -> []); `detection_params` has NO `queue_length` (unlike
tracknet). ? divergent shot_count: `int(shot_count)` inside try with no `is None` short-circuit
(copy-paste drift).
113     - `@backend/pipeline/segmenters/tracknet_hybrid.py::TrackNetHybridSegmenter` (name
`'tracknet_hybrid'`) ? copy-paste twin of wasb_hybrid; imports `TrackNetRunner`/`TrackNetConfig`
from `pipeline/detectors/tracknet_runner`; `indexing.tracknet.velocity_threshold(0.02)`;
`detection_params` adds `queue_length`. ? any P3/P4 fix must be applied to BOTH (and arguably
yolo_hybrid).
114     - `@backend/pipeline/segmenters/yolo_hybrid.py::HybridYoloSegmenter` (name
`'yolo_hybrid'`, no YOLO remains ? torchvision detector + supervision ByteTrack; ADR-005).
`::PERSON_CLASS_ID=1` ? (ultralitics used 0; wrong value -> zero detections).
`::lazy_load_model` (lazy `torchvision` import so module/tests load without it),
`::extract_action_windows_from_chunk`, `::make_tracker` (per-chunk ByteTrack ? track IDs
chunk-local), `::DETECTOR_FACTORIES`/`::DEFAULT_DETECTOR='fasterrcnn_resnet50_fpn'`. ?
velocity at `effective_fps = fps/frame_skip` -> `yolo_velocity_threshold` coupled to
`frame_skip`; pipelined-vs-sequential P2 (prefetch ffmpeg overlaps sequential GPU);
`yolo_tracker`/`bytetrack.yaml` is dead/back-compat. ? `gemini_*` config keys are deprecated
aliases still honored.
115     - `@backend/pipeline/segmenters/gemini.py::GeminiPlaySegmenter` (name `'gemini'`) ?
pure-AI, no P2. Chunks are RE-ENCODED + downscaled to `indexing.ai_chunk_scale_width` (default
```

1280; 0 = legacy stream-copy) before upload ? stream-copied 4K chunks exceed the provider's `MAX\_UPLOAD\_MB` and every chunk gets refused ("0 segments / success"); re-encode also fixes keyframe drift at chunk boundaries. Oversize refusals (provider metrics `oversize\_skipped`) are aggregated -> `logger.error` + `reporting.run\_signals` (`oversize\_clips\_skipped`) for the report rule. Workers from `indexing.ai\_max\_workers`. ? chunks only if `duration>chunk\_duration`; `max\_segment\_duration=90.0` hardcoded; `debug\_duration` silently truncates; `parse\_time` accepts colon timestamps (warns); does NOT persist candidate segments (only hybrids feed the fine-tuning table).

116 - `@backend/pipeline/segmenters/motion.py::MotionPlaySegmenter` (name `'motion'`) ? pixel absdiff baseline. ? **metadata + serve/smash/foul/winner events are ...

Committing AI-7 and opening the PR:

506. assistant (2026-07-02T06:11:33.416Z)

[external_agent_tool_call: PowerShell]
description: Commit hybrid-twin collapse and push
command: git add backend/pipeline/segmenters/trajectory_hybrid.py
backend/pipeline/segmenters/tracknet_hybrid.py backend/pipeline/segmenters/wasb_hybrid.py
backend/pipeline/detectors/base.py backend/pipeline/detectors/tracknet_runner.py
backend/pipeline/detectors/wasb_runner.py tests/test_tracknet_hybrid.py
tests/test_trajectory_hybrid_equivalence.py mypy.ini docs/CODE_MAP.md && git commit -m '@'
refactor: collapse the hybrid-segmenter twins into a shared trajectory base

tracknet_hybrid + wasb_hybrid were ~95% copy-paste; CODE_MAP carried the standing footgun "any P3/P4 fix must be applied to BOTH". Now:

- NEW backend/pipeline/segmenters/trajectory_hybrid.py: the whole engine (healthcheck gate -> P2 trajectory->windows+persist -> P3 provider handoff -> P4 DB/link). Subclasses supply only family/display_label/name/description and _build_runner(idx_cfg) -> (runner, params extras).
- tracknet_hybrid/wasb_hybrid become ~40-line thin subclasses; behavior preserved (all 7 existing pipeline tests pass with only patch-target updates to the new module).
- shot_count drift resolved into one _shot_count_from: wasb relied on

- int(None) raising into the fallback (same result by accident); the explicit is-None branch is now canonical for both.
- _wsl_bash deduped: WslCommandMixin in detectors/base.py (beside, not on, DetectorRunner - future native runners must not inherit WSL plumbing); both runners switch, local copies deleted.
- DetectorRunner ABC now declares parse_trajectory_csv / trajectory_to_action_windows - the de facto contract the hybrids always called but the ABC never named (mypy caught it post-collapse).
- mypy quarantine RATCHETED: wasb_hybrid + tracknet_hybrid entries removed (thin subclasses of the type-clean base); one explicit override-ignore remains for the documented Result-contract gap.
- NEW tests/test_trajectory_hybrid_equivalence.py: parametrized over both twins - detector identity into DB rows, shot_count behavior (4 cases), provider offset math, base-not-registered. Future divergence must be deliberate, in the base, for both at once.
- CODE_MAP 2.1/2.2 updated to match.

Suite: 351 -> 364 green (13 new). ruff + mypy clean.

True

usage: rally_seq_proto.py [-h] --manifest MANIFEST

PROTOTYPE: a learned per-FRAME rally segmenter (vs the unsupervised windowing heuristic). Motivation (2026-06-08 finding): WASB tracks the shuttle well on Kushagra (97% of GT rallies contain ≥ 2 net-crossings) yet NO velocity-windowing config segments it (per-video F1 ceiling 0.163), while it works on Adarsh (0.73). The rally SIGNAL is in the trajectory; the hand-tuned heuristic just can't extract it across footage. This prototype tests the hypothesis that a LEARNED model on per-frame trajectory features recovers the rally segments ? including on the footage the heuristic fails on. Approach (deliberately small, dependency-light: numpy + scipy + the repo's pure-python LogisticRegression ? no torch/sklearn): 1. Per-frame features over a local window from the WASB

@'

fix(detectors): keep ~ expandable in WSL staging/inference commands

shlex.quote("~/clips/x.mp4") single-quotes the whole path, so bash never expands ~ and cp fails with "cannot create regular file ~/clips/...".

This broke LIVE WSL staging for the DEFAULT ~/clips stage dir in BOTH runners (and the default ~/models weights path in the inference argv) - present since the 2026-06-07 restructure, masked because trajectories were generated via manual WSL scripts and tests mock _wsl_bash. Found by the first real end-to-end wasb_hybrid smoke run (post AI-7 collapse).

Fix: wsl_tilde_quote() in detectors/base.py - quotes only the part after a leading ~/ so bash expands the home prefix while spaces/specials in the remainder stay protected. Applied to every --capable arg in both runners (stage dest, video, frames dir, weights, output dir).

New tests pin the helper semantics AND the command shape: no quoted tilde may ever reach _wsl_bash again (stage + full inference argv).

Suite: 372 green. This closes the BACKLOG "shlex-quote WSL config values breaks ~ expansion" item.

Co-Authored-By: Claude Fable 5 <noreply@anthropic.com>

```
'@ && git push -u origin fix/wsl-tilde-quoting && gh pr create --title "fix(detectors): keep ~
expandable in WSL staging/inference commands" --body @'
**Found by the post-AI-7 live smoke run** (the eval-checkpoint protocol the owner asked for):
first real end-to-end `wasb_hybrid` invocation failed at WSL staging with `cp: cannot create
regular file `~/clips/...``.
```

Root cause

`shlex.quote()` on a `~/...` path single-quotes the tilde, so bash never expands it. Both runners staged to the **default** `~/clips` and pass `~/models/...` weights into the inference argv - the live trajectory-hybrid path has been broken this way since the 2026-06-07 restructure. It went unseen because all existing trajectories were generated via manual WSL scripts, and the unit tests mock `\_wsl\_bash`. (This is the BACKLOG item "shlex-quote WSL config values breaks ~ expansion" - now closed.)

Not an AI-7 regression - verified `\_stage\_video` is byte-identical to pre-sweep master; the refactor just enabled the first honest live run.

Fix

`wsl\_tilde\_quote()` in `detectors/base.py`: quote only the remainder after a leading `~/`, keeping home-expansion while still protecting spaces/specials. Applied to every `~`-capable argument in both runners.

Verification

- New `tests/test\_wsl\_tilde\_quoting.py`: helper semantics (5 cases) + command-shape pins - no quoted tilde can reach `\_wsl\_bash` from staging or the full inference argv.
- Suite **372 green**; ruff + mypy clean.
- Live re-run of the wasb_hybrid smoke follows on this branch before merge.

command: python run_all_tests.py 2>&1 | Select-String 'passed|RESULT'; \$state = gh pr view 97 --json state --jq .state; "PR97 state: \$state"; if (\$state -eq 'OPEN') { git add backend/pipeline/detectors/wasb_runner.py backend/pipeline/detectors/tracknet_runner.py tests/test_wsl_tilde_quoting.py; git commit -m '@' fix(detectors): abspath the output dir before /mnt translation

Second find of the live smoke: to_wsl_mnt_path passes RELATIVE paths through unchanged, so the hybrids ` "output/wasb" resolved against the WSL inference cwd (~\models\WASB-SBDT/src) - WASB ran the full 8-min GPU pass and wrote a real 172KB trajectory CSV inside WSL while Windows polled the repo-relative path ("WASB finished but expected CSV not found"). Verified first-hand: the CSV sits at ~\models\WASB-SBDT/src/output/wasb/. Both runners now abspath output_win_dir up front; new test pins that a relative out dir produces an ABSOLUTE WSL-side --out.

The watcher will wake me at Phase 3 (the Gemini handoff) or on any error; the run itself notifies on completion. WASB's GPU pass takes ~8 minutes, so I'll resume then.

607. user (2026-07-02T06:11:33.423Z)

Hello. Are all the work items done?

608. assistant (2026-07-02T06:11:33.423Z)

Almost 8 of 9 threads are done and merged; the last one (the live end-to-end verification gating PR #97) was in flight. Let me check where it landed:

638. assistant (2026-07-02T06:11:33.425Z)

Here's the complete status ? **everything is done and merged except one PR that's minutes from closing**:

```
| Item | Status |
|---|---|
| AI-1 hygiene ? AI-6 config warning | ? Merged ([#90](https://github.com/avidullu/badminton-
highlight-indexer/pull/90)?[#96](https://github.com/avidullu/badminton-highlight-
indexer/pull/96)), all on green CI |
| Bonus: SQLite connection-leak fix | ? Merged ([#94](https://github.com/avidullu/badminton-
highlight-indexer/pull/94)) ? found while wiring coverage; 340 ResourceWarnings ? 4 |
| AI-7 twin collapse | ? On master, 13 equivalence tests, mypy quarantine shrunk by two modules
? with one process slip I owe you below |
| Eval checkpoint (offline) | ? LOVO reproduces exactly 0.626 (Mahadevpura Gen-0 0.744 to
the third decimal) ? the sweep is numerically inert |
| Eval checkpoint (live) | ? Last step in flight ? details below |
| Node-24 actions chip | ? Your session merged it as
[#98](https://github.com/avidullu/badminton-highlight-indexer/pull/98) |
```

Two things you should know:

- Process slip on AI-7:** after merging #96 my script left me on master, and the AI-7 commit was accidentally committed and pushed **directly to master** ? skipping the PR gate. Everything in it was locally verified beforehand and master CI came back green on all four lanes, but it has no PR record. I chose not to force-rewind master (concurrent sessions were live ? and indeed one later flipped this very checkout's branch), so it stands as a confessed convention violation rather than a hidden one.

2. ****The live smoke earned its keep ? it found two real, pre-existing bugs**** that had silently broken the `*live* `wasb_hybrid`` path (masked for weeks because trajectories were always generated via manual WSL scripts and tests mock the WSL boundary): ``shlex.quote`` was strangling ``~`` expansion in staging (the deferred BACKLOG item, now closed), and the relative ``output/wasb`` dir resolved against the WSL cwd, so an 8-minute GPU run wrote its CSV inside WSL where Windows never looked. Both fixed in [#97](https://github.com/avidullu/badminton-highlight-indexer/pull/97) (CI green, suite 373, regression tests pin the command shapes). The verification run for the final Gemini phase got killed ~7 hours ago when the session went idle mid-flight; I've relaunched it just now with the warm GPU cache. P1/P2 are already proven live ? healthcheck through the new base, trajectory at the correct path, and 9 candidate rows in the DB with byte-correct detector identity (just verified above).

As soon as this run confirms the Gemini handoff (?5?10 min), I merge #97 and refresh the memory checkpoint ? I'll report back automatically when it lands.

[/external_agent_tool_result]

661. assistant (2026-07-02T06:11:33.427Z)

****Yes ? all work items are now done.**** The last domino fell this turn: the live end-to-end verification passed and [#97](https://github.com/avidullu/badminton-highlight-indexer/pull/97) is merged. Final state: master at `31069cb`, ****zero open PRs****, your two uncommitted PR-2 doc edits preserved untouched throughout, and the memory checkpoint + session handoff are refreshed.

Closing delta since my last report:

- ****The Gemini phase verified live despite a 503 capacity wave.**** Of 9 candidate windows, one handoff punched through the wave (the 6-attempt exponential backoff from #83 doing its job) and produced a complete P4 write: a play segment tagged `wasb-hybrid-gemini-flash-latest` with the candidate?segment link recorded. That closes the loop on every phase of the refactored trajectory base running against real WSL, real GPU, and the real provider. The 1/9 confirmation rate is provider weather ? the same 503 storms documented in the Gemini battery ? and the pipeline degraded exactly as designed.

- ****#97 merged on green**** (all four CI lanes), carrying both live-path fixes plus regression tests that pin the WSL command shapes so neither bug class can return silently.

The scoreboard for the sweep: ****9 PRs merged**** (#90?#97 mine, #98 your chip session), ****suite 351 ? 373 green****, CI grew from 2 to 4 lanes (ruff, mypy with a documented quarantine ratchet, coverage floored at 70%), one never-compiled file purged, three real runtime bugs fixed (SQLite connection leak, WSL tilde quoting, WSL relative-path output), and the quality evals re-verified to the third decimal (LOVO 0.626, Mahadevpura Gen-0 0.744) plus the first-ever verified live `wasb\_hybrid` run.

On the original question that started all this: the repo now closes the gaps that held it at 8 ? the static-analysis hole is gone, coverage can only ratchet up, the twin-drift footgun is structurally retired, and the live path is actually exercised. By my own rubric that's a ****9****, with the honest caveat that the deliberately deferred items (packaging, import-sort/pyupgrade rule groups, the `extra='forbid'` flip, yolo_hybrid fold-in) are what stand between this and higher ? all recorded in the handoff for whenever you want them.

662. user (2026-07-02T06:11:33.427Z)

Amazing! Although based on the bug that you found, did you end up regnerating the trajectories for all the videos which we have used to train upon? Or it was lesser severre than that?

663. assistant (2026-07-02T06:11:33.427Z)

Good instinct to ask ? let me make the lineage claim airtight by checking where the training/eval trajectories actually point:

664. assistant (2026-07-02T06:11:33.427Z)

```
[external_agent_tool_call: PowerShell]
description: Show trajectory source paths in the training/eval manifest
command: $code = @'
import json
m = json.load(open("output/human_lovo_manifest.json", encoding="utf-8"))
sets = m.get("eval_sets") or m.get("videos") or m
for v in sets:
    traj = v.get("trajectory") or v.get("traj") or ""
    print(f"{v.get('video_id') or v.get('name'):24s} -> {traj}")
'@
$code | python -
[/external_agent_tool_call]
```

668. assistant (2026-07-02T06:11:33.427Z)

No regeneration needed ? it was genuinely less severe than that, for two independent reasons, both now verified rather than assumed:

****1.** The bug class was fail-closed, not fail-corrupt.** Both bugs made `run\_predict` return `None`, which makes the segmenter abort with zero output ("WASB produced no trajectory; aborting"). The tilde bug failed before any inference ran; the relative-path bug let inference complete but left the CSV where Windows couldn't see it ? so the caller still got nothing. There is no code path where either bug delivers a *wrong* trajectory to a consumer: a trajectory either arrived intact or never arrived at all. (The orphaned CSV from run #3 that I found inside WSL was itself complete and well-formed ? just invisible.)

****2.** The training corpus never came through that path anyway.** I just checked the manifest: all six trajectories point to `Annotation Setup/Collect/Trajectories/\*\_traj.csv` ? the outputs of the manual WSL-side scripts (`run\_wasb\_\*.sh`) that earlier sessions ran *inside* WSL, invoking `wasb\_infer.py` directly. Those scripts bypass the Windows-side staging code entirely, which is precisely why these bugs stayed invisible until the first honest end-to-end run. The inference core that produced your corpus is the same `wasb\_infer.py` the fixed live path stages ? the fix changed where files land, not a single number.

Belt and braces on top of that: the post-sweep LOVO reproduction came back at exactly ****0.626**** with Mahadevpura at 0.744, computed from those very CSVs, and the 2026-06-10 audit had already independently spoof-checked their row counts and visibility stats against the documented values.

Worth distinguishing: the one historical bug that *was* in the training-data-poisoning class ? detector artifacts keyed by file basename, where two `match.mp4`s could reuse each other's frames ? was found by the audit and fixed back in #64, before the Gen-0 corpus was assembled, and the smoke run re-confirmed the video-id keying live (the staged video and CSV both carried the MD5-namespaced key).

The practical upside going forward: now that the live path actually works end-to-end, future corpus growth (the camera-pilot videos, new multi-court matches) can run through the pipeline proper instead of hand-maintained WSL scripts ? same trajectories, one less manual step, and the candidates land in the fine-tuning table automatically.

669. user (2026-07-02T06:11:33.427Z)

lovely!

670. assistant (2026-07-02T06:11:33.427Z)

Glad it all landed cleanly! The repo's in a good resting state: master at `31069cb`, zero open PRs, four CI lanes guarding it, and the handoff + current-state files are refreshed so any future session picks up exactly here. Whenever you're ready, the next moves on the board are the owner-gated ones ? UI-alpha PR-2 (upload/download), corpus growth for the sign test, and setting the ship-gate F1 target. Enjoy the 9! ?

671. user (2026-07-02T06:11:33.427Z)

I have a message from Claude CoWork for you -- "Run scratch/PR2_HANDOFF.md" (and if #88 is still open: "run scratch/PR88_FIX.md first")

672. assistant (2026-07-02T06:11:33.427Z)

On it ? that's the ratified Cowork?Claude-Code workflow (Cowork designs and leaves the handoff; I execute the git/PR mechanics). First: fresh tree state, #88's actual status, and the handoff itself:

673. assistant (2026-07-02T06:11:33.428Z)

```
[external_agent_tool_call: PowerShell]
description: Fresh git status, branch, and PR 88 state

1      # PR-2 handoff ? chunked upload (B2) + highlight download (B3) · for Claude Code to
execute
2
3      **Date:** 2026-06-11 · **Spec:** `docs/UI_PROPOSAL.md` B2+B3 · **Plan:**
`docs/UI_ALPHA_EXECUTION_PLAN.md` Phase L
4      **Protocol:** Claude Code runs everything below; Avi only reviews the PR. (Working
agreement in the execution plan.)
5
6      ## Step 0 ? run the tests FIRST (Cowork sandbox is down again; suite is unexecuted)
7
8      ```
9      python run_all_tests.py
10     python -m pytest tests/test_upload_download.py -v
11     ```
12
13     If anything is red: fix trivial breaks (imports, assertion details) yourself; leave
design-level
14     failures for Cowork-Claude with a note here.
15
16     ## What changed (PR-2 file list ? exactly these for the branch)
17
18     | File | Change |
19     |---|---|
20     | `backend/config/models.py` | `SecurityConfig` gains `upload_dir` (default
`output/uploads`), `max_upload_mb` (4096), `max_part_mb` (95), `allowed_upload_extensions`
([mp4, mov]); `List` import |
21     | `backend/main.py` | B2: `POST /api/upload/init` ? `PUT /api/upload/{id}/part/{n}`
(strictly sequential, streamed, caps abort with 413) ? `POST /api/upload/{id}/complete`
(assemble, never-overwrite, returns `{path, video_id}` for /api/process) + `DELETE
/api/upload/{id}`; B3: `GET /api/highlights/{video_id}/{filename}` (safe-name + root-containment
+ FileResponse). In-process upload registry + lock. |
22     | `backend/api/static/app.js` | Compile: fixes `rally_ids` ? **`segment_ids`** (pre-
existing bug ? compile NEVER worked from the browser) and replaces the dead local-path alert
```

```

with a working ? download link via B3 |
23 | `tests/test_upload_download.py` | **New** ? 14 tests: init validation
(ext/traversal/oversize), full roundtrip with MD5 assert, no-overwrite, sequencing 409s,
unknown-id 404s, per-part + total cap aborts, abort endpoint, download
(traversal/unknown/missing/stream-success) |
24 | `docs/CODE_MAP.md` | $2.0 upload/download surface (+ carries last session's #87-merge
status sync) |
25 | `docs/DEFERRED_HARDENING_PLAN.md` | (carried from last session) $3 banner ? MERGED #87
|
26 | `docs/UI_ALPHA_EXECUTION_PLAN.md` · `docs/NEXT_STEPS.md` | Status sync (PR-1 merged /
PR-2 code complete) |
27
28 > If the docs PR (`docs/khelsutra-plan-2`, recreated per `scratch/PR88_FIX.md`) hasn't
merged yet,
29 > merge/rebase order doesn't matter ? overlapping doc files take whichever lands second;
content
30 > is already consistent.
31
32 ## Branch / commit / PR
33
34 ```
35 git checkout master
36 git pull
37 git checkout -b feat/upload-download
38 git add backend/config/models.py backend/main.py backend/api/static/app.js
tests/test_upload_download.py docs/CODE_MAP.md docs/DEFERRED_HARDENING_PLAN.md
docs/UI_ALPHA_EXECUTION_PLAN.md docs/NEXT_STEPS.md
39 git commit -m "feat(api): chunked upload + highlight download (B2+B3) - static UI
compile fix + download link"
40 git push -u origin feat/upload-download
41 gh pr create --title "feat(api): chunked upload + highlight download (B2+B3, PR-2)"
--body "Implements UI_PROPOSAL B2+B3 (UI_ALPHA_EXECUTION_PLAN PR-2): chunked upload (init ->
sequential parts <=95MB streamed with per-part/total caps -> complete with MD5 identity, never-
overwrite) landing under security.upload_dir; streaming GET
/api/highlights/{video_id}/{filename} with safe-name + root containment. Static UI: fixes the
pre-existing rally_ids->segment_ids compile bug and adds a working browser download link. Upload
state is in-process (single-box alpha; restart aborts partials); per-user partitioning lands
with PR-3. 14 new tests."
42 ```
43
44 ## Design decisions (review points)
45
46 1. **Sequential parts only** (409 otherwise) ? simplest correct protocol for the alpha;
the SPA
47 uploader (M2) sends parts in order anyway. Parallel/resumable parts = beta (GCS
signed URLs).
48 2. **Caps abort the whole upload** (413 + state removed) ? a half-poisoned upload can't
linger.
49 3. **`complete` returns `{path, video_id}`; client then calls /api/process ? ke...

Sloppy replace on my part ? the old string was a prefix of the two already-fixed lines, producing `from e from e`. Correcting:

```
[external_agent_tool_call: PowerShell]
description: Open PR-2 and watch its CI
command: gh pr create --title "feat(api): chunked upload + highlight download (B2+B3, PR-2)"
--body '@'
Implements UI_PROPOSAL B2+B3 (UI_ALPHA_EXECUTION_PLAN PR-2): chunked upload (init -> sequential
parts <=95MB streamed with per-part/total caps -> complete with MD5 identity, never-overwrite)
landing under `security.upload_dir`; streaming `GET /api/highlights/{video_id}/{filename}` with
safe-name + root containment. Static UI: fixes the pre-existing `rally_ids` -> `segment_ids`
compile bug and adds a working browser download link. Upload state is in-process (single-box
alpha; restart aborts partials); per-user partitioning lands with PR-3. 15 new tests.
```

Design decisions (review points ? from the Cowork handoff)

1. **Sequential parts only** (409 otherwise) ? simplest correct protocol for the alpha; parallel/resumable = beta (GCS signed URLs).
2. **Caps abort the whole upload** (413 + state removed) ? no half-poisoned uploads lingering.
3. **complete` returns` {path, video_id}`**; client then calls `/api/process` ? upload and processing stay decoupled.
4. **Never-overwrite rename** (`name-<id8>.mp4`) ? two testers with `match.mp4` can't clobber each other pre-PR-3.

5. ****In-process upload registry**** ? deliberate (single box; mirrors #16's executor reasoning).
6. ? ****Hosted-mode note:**** when `security.allowed\_video\_root` gets set (PR-3/deploy) it must contain `upload\_dir`, or /api/process rejects uploaded paths.

Execution notes (Claude Code)

- Cowork sandbox was down, so the suite ran here first per the handoff Step 0: ****388 passed**** (15 new upload/download tests), ****ruff + mypy + coverage lanes all clean****.
- One trivial fix applied per the handoff's "fix trivial breaks yourself" rule: 3 ruff ****B904****s in the new endpoints (`raise HTTPException ... from e` chaining ? same convention AI-3 standardized repo-wide). No design-level changes.
- Carries the two doc edits preserved from the #89 split (DEFERRED_HARDENING_PLAN #16-merged banner; UI_ALPHA_EXECUTION_PLAN working-agreement rewrite), per plan.

****Per the working agreement: awaiting Avi's review ? not auto-merging this one.****

699. assistant (2026-07-02T06:11:33.429Z)

Done ? the Cowork handoff is fully executed. Summary:

[#99 ? feat(api): chunked upload + highlight download (B2+B3, PR-2)](<https://github.com/avidullu/badminton-highlight-indexer/pull/99>) is open and CI-green on all four lanes, awaiting your review (per the working agreement, this one is yours to merge ? I didn't auto-merge).

What happened along the way:

- **##88 check:** confirmed CLOSED (it became the merged #89), so `PR88\_FIX.md` was correctly skipped.
- **Pre-flight beyond the handoff:** since Cowork's sandbox was down during my quality sweep, I first verified their uncommitted implementation layers cleanly on post-sweep master ? it does (+194/?7, purely additive; my CODE_MAP and pydantic changes intact underneath).
- **Step 0:** suite **##388 green** including the 15 new upload/download tests (handoff said 14 ? there are 15), mypy clean. Ruff caught 3 missing `raise` ? from e` chains in the new endpoints ? fixed under the handoff's "trivial breaks" rule (I briefly fumbled a replace into `from e from e` and corrected it; final state verified clean across ruff + mypy + full suite).
- **Branch/commit/PR:** exactly the eight handoff files on `feat/upload-download`, including the two doc edits we'd been protecting in the working tree since the #89 split ? they're finally committed, and the tree is now clean of them.
- The PR body carries Cowork's six design review points (sequential-parts protocol, cap-abort semantics, the `complete` ? /api/process` decoupling, never-overwrite rename, in-process registry, and the ? hosted-mode `allowed_video_root` ? `upload_dir` constraint) plus my execution notes.

Once you merge, the handoff's tomorrow-morning CUJ runbook applies as written: `python -m backend.main --server` ? `localhost:8000` ? path-paste ? index ? select rallies ? compile ? the new **## Download** link (which now actually works ? Cowork's fix for the `rally\_ids` ? `segment\_ids` bug means compile works from the browser for the first time). Memory is checkpointed accordingly.

700. user (2026-07-02T06:11:33.429Z)

Can you go ahead and merge the PRs for this and ensure the due diligence is followed (tests, e2e run for more riskier changes, doc updates like Next steps etc.)

701. assistant (2026-07-02T06:11:33.429Z)

Yes ? and the riskiest piece here is the new HTTP surface, so the diligence order is: **## real e2e** against a live server first, then merge, then the doc sync**##**. Reading the actual endpoint contracts so the e2e exercises them faithfully:

[external_agent_tool_result]
18      - ? **App-factory / lifespan + lazy torch-cv2 imports** ? `uvicorn backend.main:app`
leaves globals None, and importing the API pulls the GPU stack. Belongs with the async-job slice
(#16). **Revisit:** when the async slice starts.
19      - ? **WSL temp/frame/cache + Gemini remote-file GC** ? staged videos, PNG frame dumps,
`*_wasbcache`, and orphaned Gemini uploads are never cleaned. Needs a retention policy.
**Revisit:** before any volume/batch processing.
20      - ? **shlex-quote WSL config values** ? latent injection if config becomes per-tenant;
non-trivial because the paths rely on `~` expansion (naive quoting breaks it). **Revisit:** with
the tenancy work.

description: Commit and open the docs status-sync PR

command: "branch: \$(git branch --show-current)"; git add docs/NEXT_STEPS.md

docs/UI_ALPHA_EXECUTION_PLAN.md docs/BACKLOG.md && git commit -m '@'

docs: status sync - PR-2 MERGED (#99, live-E2E-verified), sweep recorded, BACKLOG shlex item closed

- NEXT_STEPS header: PR-2 merged + the 8->9 quality sweep (#90-#98) summarized.
- UI_ALPHA_EXECUTION_PLAN: PR-2 checked off with the live E2E evidence (3-part MD5 byte-identity upload; negative paths; compile->download).
- BACKLOG: shlex-quote WSL item DONE via #97 (wsl_tilde_quote), with the residual tenancy-era note retained.

Co-Authored-By: Claude Fable 5 <noreply@anthropic.com>

'@ && git push -u origin docs/pr2-merge-status-sync && gh pr create --title "docs: status sync - PR-2 merged (live-E2E-verified), quality sweep recorded" --body '@'

Due-diligence doc sync after merging #99:

- **NEXT_STEPS.md**: PR-2 now MERGED (#99) with live-E2E note; the 8->9 quality sweep (#90-#98) recorded in the session header.
- **UI_ALPHA_EXECUTION_PLAN.md**: PR-2 checked off; the at-merge live E2E evidence captured inline (86 MB 3-part upload -> MD5 byte-identity; 409/400/404 negative paths; compile of a real confirmed rally -> streamed download).
- **BACKLOG.md**: the shlex-quote WSL item closed by #97 (`wsl\_tilde\_quote`), residual tenancy-era note retained.

Docs only - no code.

[external_agent_tool_result]

The file C:\Users\avidu\.claude\projects\C--Users-avidu-Projects-badminton-highlight-indexer\memory\current-state.md has been updated successfully. (file state is current in your context ? no need to Read it back)

[/external_agent_tool_result]

745. assistant (2026-07-02T06:11:33.432Z)

Done ? both PRs merged with the full diligence chain. Master is at `020ff61`, zero open PRs.

****What merged:****

- [#99 ? chunked upload + highlight download (B2+B3, PR-2)](<https://github.com/avidullu/badminton-highlight-indexer/pull/99>)
- [#100 ? docs status sync](<https://github.com/avidullu/badminton-highlight-indexer/pull/100>)

****Due diligence performed, in order:****

1. ****Tests**** ? full suite 388 green locally (including the 15 new upload/download tests) plus all four CI lanes green on both PRs.
2. ****Live E2E for the risky change**** (the new HTTP surface) ? real server on `:8123`, real artifacts:
 - ****Upload:**** the 86MB smoke video sent in 3 sequential parts, reassembled to ****MD5 byte-identity**** with the source (the returned `video\_id` matched `compute\_video\_id` of the original exactly).
 - ****Negative paths:**** out-of-order part ? 409, bad extension and traversal filenames ? 400, unknown upload id ? 404.
 - ****Download hardening, both layers:**** backslash-encoded traversal reaches the handler and gets the safe-name 400; `%2F`-encoded traversal never even reaches it (router 404). The one e2e "failure" was my test expecting 400 where the router answers first ? defense verified intact at both layers.
 - ****The actual CUJ tail:**** compiled the real confirmed rally from this morning's smoke run into a 3.9MB reel and streamed it back through `GET /api/highlights/...` ? so the `segment\_ids` compile fix and the download link are proven against real data, not just mocks.
3. ****Doc updates**** (#100) ? `NEXT\_STEPS.md` header now shows PR-2 merged plus a summary of the #90?#98 quality sweep; `UI\_ALPHA\_EXECUTION\_PLAN.md` has PR-2 checked off with the E2E evidence inline; and `BACKLOG.md`'s shlex-quote WSL item is formally closed by #97 (with the residual tenancy-era note kept honest).
4. ****Memory**** ? current-state checkpoint updated to the merged reality.

Your tomorrow-morning CUJ runbook is now fully unblocked: `python -m backend.main --server` ? paste path ? index ? select rallies ? compile ? the ? download link that, as of today, actually works. The one thing to remember when PR-3 (identity) lands: `security.allowed\_video\_root` must contain `upload\_dir`, or `/api/process` will reject uploaded paths ? it's flagged in the plan.

746. user (2026-07-02T06:11:33.432Z)

can you sync to remote head and refresh the meory and handoff of this repo?

747. assistant (2026-07-02T06:11:33.432Z)

Following the repo-freshness convention ? `git pull --ff-only` first, then I'll refresh memory and handoff against the true remote state.

`git pull --ff-only` came back ****Already up to date**** at `6de70aa` ? but that's notable: this is well past where my session's work ended (#100 / `020ff61`). Per the parallel-slates convention, other sessions merged a batch of PRs (#101?#108) since. Before I touch memory, I need to honestly reconcile what actually happened ? I won't fabricate provenance for PRs I didn't run. Let me gather the real history:

`git pull --ff-only` succeeded ? **already up to date at `6de70aa`**, so the sync is done. But the important finding: the remote moved far past my session. Since my #100, **seven PRs (#101?#108)** merged from other slates, plus there's an **open #106** and **uncommitted WIP** in the tree that isn't mine. I'll record all of this faithfully ? reading PR titles/dates from git, not claiming I did any of it ? and flag the WIP so it's never clobbered. Reading the current memory files before refreshing:

8      ---
9
10     # Current state ? updated continuously (see [[working-agreement-checkpoints]])
11
12     **Checkpoint:** 2026-06-13 (FIRST FULL E2E GPU RUN on a real 4K GoPro match + 2 merged
fixes).
```

```

13      Owner asked to run the indexer E2E on the GPU over `F:\GoPro Hero Black
12\KhelSutra\Badminton 12
14      June 2026\GX010125.MP4` (12.8-min 4K60, 11.5GB), highlights for rallies with >7 shots,
config-driven.
15      - **DELIVERED:** `output\GX010125_highlights.mp4` ? **11 rallies (shot_count 8?16) of 52
detected**;
16      true 4K 3840x2160 h264 59.94fps, 2:23, 1.15GB; stitched from the 4K ORIGINAL (proxy
only for indexing).
17      wasb_hybrid: 64.8% shuttle visibility, 18 candidate windows ? 52 Gemini-confirmed
rallies. min_shot_count=8
18      correctly excluded a 7-shot rally (">7" semantics). Gemini ran clean (no 503s);
~47-min wall clock.
19      - **2 PRs merged on green CI** (owner's [[working-agreement-merging]] standing
authorization):
20      **#107** `/api/compile` now enforces `stitching.min_shot_count` (parity w/
run_process_and_stitch);
21      **#108** sticher `_ff_quote` escapes the Windows drive-letter colon ? fixes the on-
by-default
22      bundled-font watermark (PR #103) silently failing on Windows (`fontfile='C:/...'`
broke ffmpeg
23      drawtext parsing; also fixed absolute logo `movie=` paths). Both with regression
tests; suite 409 green.
24      - **The hard-won run recipe is in [[gotcha-long-runs-gpu-wsl]]:** Modern Standby killed
the first 2
25      overnight attempts (keep-awake fix); cv2 PNG extraction (~38min) is the real
bottleneck not the GPU
26      (ffmpeg pre-extract, count-exact for CFR ? skips it); 1080p-proxy-index / 4K-stitch;
per-phase
27      observability (cache manifest for WASB, handoff dir for Gemini). Reusable scripts in
`scratch/`
28      (run_gx010125.py, keep_awake.ps1, probe_.py).
29      - ? LOCAL UNCOMMITTED `config.json`: default_segmenter=wasb_hybrid, min_shot_count=8,
wasb.timeout_sec=7200
30      (set for this run; revert to gemini/1/1800 if not wanted). Watermark fix NOT applied
to the delivered
31      reel (it ran before #108); a re-stitch would hit the DB segment cache + now-working
watermark (~5min).
32
33      **Checkpoint:** 2026-06-12 (latest ? PAID COMPONENT REMOVED + VIDEO-LOCALITY MODEL; **PR
#104 updated `9c84fea` +
34      PR #106 OPEN `85abe26`, both CI green, both AWAITING OWNER**). Owner spec: (1) remove
ALL associate-pay from the
35      field kit ("something else in mind") ? flyer/playbook now "Engagement terms: discussed
individually"; honesty
36      mechanics reworded ("judged on honest capture, not positive answers"); KEPT: WTP
research questions (study subject)
37      + the ACADEMY's Phase-2 session fee (different party ? flagged, owner may strip too).
(2) Storage/upload questions
38      answered from code: uploads ARE stored in full (`security.upload_dir`, NO retention
policy ? BACKLOG); 10GB CANNOT
39      upload (max_upload_mb=4096 rejects at init; ?90MB sequential parts; hours on Indian
uplinks). (3) NEW
40      `docs/VIDEO_LOCALITY_MODEL.md` (#106): central insight = timestamps are the product,
video is dead weight (only the

760. assistant (2026-07-02T06:11:33.433Z)

The memory `current-state.md` is in good shape ? sibling sessions maintained it through #108 (the 4K GPU E2E run). So the real gap is the **handoff** (last touched by me at 2026-06-11, now ~2 days and 8 PRs stale) and a short reconciliation note capturing the in-flight WIP. Reading the handoff in full before rewriting:

11
12     **Last updated:** 2026-06-11 (end of the 8?9 quality sweep: #90?#98 merged ?
ruff/mypy/coverage-floor CI lanes,
13     SQLite conn-leak fix, config unknown-key warning, hybrid-twin collapse into
`trajectory_hybrid.py`, WSL tilde+abspath
14     live-path fixes; suite 373 green, CI = 4 lanes). **Read [[current-state]] first** for
blow-by-blow; this is the
15     ~1-page orientation.
16
17     ## You are here (2026-06-11) ? ? HARDENED + M0 SCAFFOLDED + MOAT QUANTIFIED + QUALITY-
SWEPT
18     0. **8?9 quality sweep DONE (2026-06-11):** lint/type/coverage gates live in CI
(ruff.toml, mypy.ini w/ quarantine
19     ratchet, --cov-fail-under=70); trajectory hybrids share one engine (equivalence-
tested); **wasb_hybrid had its
20     FIRST verified live E2E run** (two real live-path bugs found+fixed via #97; LOVO
0.626 re-verified EXACT post-sweep).
21     Deferred: ruff I/UP, yolo_hybrid fold-in, pyproject (owner deselected),
extra='forbid'.
22     1. **Audit + remediation DONE:** 8-auditor deep audit (all findings adversarially
verified) ? 12-PR hardening sweep
23     (both repos). Master was literally broken (compiler SyntaxError) and is now CI-
guarded (both repos have CI; merges
24     gated on verified-green). Corpus licensing corrected (23 ShuttleSet broadcast rows
demoted; commercial export =
25     owned data only). Suite: indexer 336 green, collector 136 green.
26     2. **ADR-008 ratified (owner):** training in-repo (`training/`) behind a CI-enforced
import wall; featurizer
27     single-sourced in `backend/features/rally_seq.py` (train==serve); serving consumes
versioned ARTIFACT BUNDLES only;
28     ship-gate product-side; **pre-committed repo split** (`sports-temporal-models`) at
Gen-2/second-consumer.
29     "Split driven by productionization, not isolation" (owner's framing).
30     3. **M0 executed:** canonical GT loader (`backend/eval/gt_loader.py` ? closed the two-
loader format fork, round-trip
31     tested vs collector export) . **n=6 owned corpus IN the collector SoR** (262 rallies,
Proprietary) . **Gen-0
32     harness** `python -m training.gen0.harness` (train?LOVO?gate?artifact; v0.1.0 built:
**LOVO 0.626**, floor 0.480
33     passed, sign test 5/6 p=0.109 ? ship=False with honest blockers).
34     4. **Gemini battery DONE (the moat is quantified):** clean-ish Mahadevpura ? heuristic
0.657 / Gen-0 0.744 /
35     two-stage refine 0.83 / **wrapper 0.93**; multi-court Kushagra ? heuristic 0.157 /
Gen-0 0.561 / **wrapper 0.66**
36     (FPs = background-game pickups + dead-time merges, the contrast-metric confound).
**Ship target = beat 0.66 on
37     multi-court**; clean footage is commoditized (serve via Gemini). Baselines committed
in `eval_baselines/`.
38     Demo reel exists: `output/MahadevpuraSingles_highlights.mp4`.
39     5. **Gemini ops (hard-won):** prepaid/cold projects burst-throttle with a MISLEADING
"credits depleted" 429 ? ramp
40     gradually; serial works (`ai_max_workers=1` shipped); chunks re-encode to 1280
(`ai_chunk_scale_width`, PR #80);
41     generate retries = 6 attempts exponential+jitter (PR #83); model = `gemini-flash-
latest` alias (2.5-flash is
42     legacy). 503 capacity waves are real ? provider-fallback registry is load-bearing....
[/external_agent_tool_result]

```

763. assistant (2026-07-02T06:11:33.433Z)

I now have the full, verified picture. The sync is complete (`6de70aa`, already up to date). The `current-state.md` is fresh ? sibling slates maintained it through today's 4K GPU E2E run. But two things need recording: (1) the **handoff is genuinely stale** (last touched by me 2026-06-11, blind to #99?#108 and the in-flight cache-hygiene work), and (2) there's **uncommitted WIP in the tree that isn't mine** and must be flagged, not clobbered.

Critical discipline here ([[working-agreement-attribution]]): #101?#108 and the cache-hygiene slice were done by **other slates, not this session** ? I'm recording them from `git log`/`gh` as verifiable facts, not claiming authorship or inventing how they were built.

First, a concise reconciliation checkpoint on `current-state.md` (inserting, never overwriting the siblings' entries):

764. assistant (2026-07-02T06:11:33.434Z)

```
[external_agent_tool_call: Edit]
file: C:\Users\avidu\claude\projects\C--Users-avidu-Projects-badminton-highlight-indexer\memory\current-state.md
[/external_agent_tool_call]
```

765. assistant (2026-07-02T06:11:33.434Z)

```
[external_agent_tool_result]
The file C:\Users\avidu\claude\projects\C--Users-avidu-Projects-badminton-highlight-indexer\memory\current-state.md has been updated successfully. (file state is current in your context ? no need to Read it back)
[/external_agent_tool_result]
```

766. assistant (2026-07-02T06:11:33.434Z)

Now the full handoff rewrite ? `You are here` advanced to today, recent PRs recorded, WIP flagged, next-steps and gotchas refreshed:

767. assistant (2026-07-02T06:11:33.434Z)

```
[external_agent_tool_call: Edit]

[/external_agent_tool_result]
```

772. assistant (2026-07-02T06:11:33.434Z)

Done. Both tasks complete, and I touched **only** the two memory files ? the repo working tree is exactly as I found it.

Sync

``git pull --ff-only`` ? **already** up to date at ``6de70aa`` (#108). Nothing to merge; the local checkout was current with remote.

What I reconciled (and an honest attribution note)

Your repo moved well past where my last session left it (#100). Since then **seven** PRs landed from other slates ? I recorded these as verified facts from ``git log`/`gh``, **not** as my own work:

- **#101?**#103, #107, #108 ? the branding-watermark feature trio, config padding/min-shot-count parity, and the Windows ffmpeg drive-letter-colon fix
- **#104, #105** ? the C13 field kit (associate-pay removed per your spec) and the Kannada-first i18n design plan
- **Open: #106** ? the video-locality model doc, awaiting your review
- Plus the **first full 4K-GPU E2E run** on the real GoPro match (``GX010125_highlights.mp4``, 11 rallies of 52) ? already captured in current-state by whoever ran it

What I refreshed

- ``session-handoff.md`` ? was 2 days stale (frozen at the 8?9 sweep, blind to everything above). Rewrote "You are here" to 2026-06-13, added all recent landings, advanced next-steps (item 5 "async job model #16" was stale ? it's merged as #87; the live next UI slice is **PR-3 identity**), and surfaced #106 as an open owner decision.
- ``current-state.md`` ? was already fresh (siblings maintained it through today), so I only **inserted** a reconciliation checkpoint, never overwrote theirs.

? One thing for your attention

There's **uncommitted WIP** in the working tree that isn't mine ? a WSL **cache-hygiene** slice in progress (built on the ``wslCommandMixin`` from my #97): ``_wsl_free_gb`/`_wsl_rm_rf``, new ``keep_frames`/`min_free_gb`` config, a pre-run disk guard, and post-success cache deletion, across ``base.py`/`wasb_runner.py`/`tracknet_runner.py`/`models.py`/`config.json``, plus untracked ``arial.ttf`` and ``docs/STORAGE_SHARING_MODEL.md``. It's not PR'd yet. I left it completely untouched and flagged it in both memory files so no session clobbers it ? but you'll want to either have its owner PR it or fold it into the next run before it drifts.

773. user (2026-07-02T06:11:33.434Z)

can you help clean it up? Maybe move to a new branch? Can you sync to head and do that?

774. assistant (2026-07-02T06:11:33.434Z)

The SessionStart hook just flagged something critical: it references ``python -m tools.cleanup_caches``, and the session-start git log shows **#109** "feat: cache hygiene ? self-cleaning pipeline + cleanup tool + disk guard" and **#110** are already merged ? past the ``6de70aa`` I synced to last turn. That strongly suggests the "uncommitted cache-hygiene WIP" I flagged may **already be merged as #109**, which changes the cleanup entirely.

So before touching anything: fetch, find the true remote head, and check whether those working-tree changes are already upstream. **No destructive action until I've confirmed that.**

775. assistant (2026-07-02T06:11:33.434Z)

```
[external_agent_tool_call: PowerShell]
description: Read-only: stash, fetch, and compare local HEAD to origin/master

7651687 feat: cache hygiene ? self-cleaning pipeline + cleanup tool + disk guard (#109)
1c9be4c docs(platform): video-locality mental model ? the 10GB question (#106)
6de70aa fix(stitcher): escape drive-letter colon in ffmpeg filtergraph paths (#108)
3461898 feat(api): enforce stitching.min_shot_count on /api/compile (#107)
2a8d1ea Merge pull request #105 from avidullu/claude/indexer-doc-review-XVPT
ddf81c8 Merge pull request #104 from avidullu/docs/pmf-field-signals
0c576d5 docs: add internationalization (i18n) design plan ? Kannada-first, by design
[/external_agent_tool_result]
```

777. assistant (2026-07-02T06:11:33.434Z)

Local HEAD = origin/master = `15e4e0e` (#110) ? ****already at head****, no pull needed. And the key fact: ****#109 "cache hygiene ? self-cleaning pipeline + cleanup tool + disk guard" is now merged.**** That's exactly the WIP I flagged last turn. So I need to check whether the working-tree changes are now redundant (already upstream) or genuinely leftover:

778. assistant (2026-07-02T06:11:33.434Z)

```
[external_agent_tool_call: PowerShell]

[/external_agent_tool_result]
```

780. assistant (2026-07-02T06:11:33.434Z)

Big reconciliation: the **code WIP** is gone from the modified list ? ``base.py`,
`wasb_runner.py`, `tracknet_runner.py`, `models.py`` all got committed and merged as **#109**. So that part is done; no cleanup needed there.

What genuinely remains uncommitted is much smaller: ``config.json`` (local run-knobs), and two untracked files ``arial.ttf`` + ``docs/STORAGE_SHARING_MODEL.md`` (the ``scratch/`` and ``artifacts/`` entries are the intentional local carryovers already classified as "not mess"). Let me investigate each before deciding what "cleanup" means ? I won't assume:

781. assistant (2026-07-02T06:11:33.434Z)

783. assistant (2026-07-02T06:11:33.435Z)

Now it's clear. `config.json` is just **local run-knobs** (segmenter?wasb_hybrid, timeout?7200, min_shot_count?8 ? the 2026-06-13 GPU-run settings, not a feature), and `arial.ttf` is a **stray leftover** ? the real watermark font shipped as `backend/assets/fonts/RobotoSlab-Regular.ttf` in #103, so the root `arial.ttf` is unused junk from the scratch repro scripts. Let me read the one unknown (the storage doc) and confirm what's intentionally-untracked vs. mess:

[external_agent_tool_result]
1      # Storage-priced sharing ? mental model (DRAFT v2 for co-design)
2
3      **Status:** DRAFT ? owner + Claude co-design session pending; nothing here is ratified.
4      **Date:** 2026-06-12 (v2 adds: model-tier axis, social layer, on-device end-state, abuse
5      economics ? per owner's second brief) . **Source:** owner briefs (voice note `Umiya
6      Velociti.m4a`
7      pending transcription) + UI_PROPOSAL . HOSTING_PLAN . PMF research . NEXT_STEPS quality
8      table.
9      ? If ratified, this **supersedes the monetization framing in COMMERCIALIZATION.md**
10     (away from
11     per-video/subscription, toward storage-anchored tiers that bundle model quality) ?
12     record as an ADR.
13
14     ## 1. The one-line model (v2)
15
16     Don't sell videos or subscriptions ? **sell shelf space, and let model quality ride the
17     shelf**:
18     free = **2 GB + the owned model**; paid = **more shelf + the best model**; the visible
19     meter is
20     always storage. The social layer makes the shelf worth filling; the owned model makes
21     the free
22     tier cost ~nothing; the end-state moves compute onto the customer's own hardware
23     entirely.
24
25     ## 1a. The three coupled axes (one user-visible meter)
26
27     | Axis | Free | Paid | End-state (serious users) |
28     |---|---|---|---|
29     | **Storage** (the meter) | 2 GB library | 10 GB+ / pooled | Mostly local disk; cloud =
30     shareable library only |
31     | **Model** (rides the tier) | Owned model only ? **never Gemini** | Best path (two-
32     stage refine / fronttier) | Best owned model, on-device |
33     | **Compute** (the cost) | Our GPU, capped runs | Our GPU, priority | **Their GPU**
34     (USB-drive workflow) |
35
36     ## 2. The load-bearing decision: two tiers of object
37
38     | Tier | What | Size reality | Stored? | Quota? |
39     |---|---|---|---|---|
40     | **Source** (raw match upload) | Processing INPUT | 1?4 GB each | Temporarily: kept
41     through processing + correction window, then **auto-deleted** (e.g. 7 days or on "corrections
42     confirmed") | Not by default; optional "keep my raw match" toggle = counts |
43     | **Library** (compiled reels, kept rally clips, thumbnails) | The PRODUCT | reel ?
44     50?80 MB (3?5 min 720p) | Durable | **Yes ? this is what 2 GB means** |
45
46     Why this split: 2 GB cannot hold even one raw match, but holds **~25?40 reels** ? the
47     quota is
48     only meaningful against outputs. It also kills the "free CDN" abuse vector for a
49     storage-priced
50     product: **the library only ever contains pipeline outputs** ? there is no path to park
```

```

arbitrary
35     files in it. (Sources additionally pass the existing relevance validator.)
36
37     So: "Do we store the uploaded video?" ? **Yes, transiently ? it's a processing input
with a
38     retention deadline, not a possession.** The reel is the possession.
39
40     ## 3. Eviction policies = a pluggable registry (the repo's own pattern)
41
42     `EvictionPolicy` ABC + registry, exactly like `segmenter_registry`:
43     `fifo` (oldest first) . `largest_first` . `smallest_first` . `least_visited` (view-
counter) .
44     `hard_stop` (no deletion ? block new saves until user frees space or upgrades).
45
46     - **Proposed default: `hard_stop`** ? never silently delete someone's match memories;
FIFO etc.
47     are opt-in conveniences. (Co-design question #2.)
48     - **Grace flow:** over quota ? banner + email with the exact list the chosen policy
would evict ?
49     N-day grace (propose 7) ? evict, logged in an `eviction_log`. Offer download-before-
evict.
50     - `least_visited` needs a decision: owner views, public views, or both?
51
52     ## 4. CUJ after upload (end-to-end)
53
54     ```
55     record ? upload source ? async job (PR-1) ? review/correct (corpus engine, PR-4)
56     ? compile reel(s) ? reel lands in LIBRARY (quota meter ticks)
57     ? share: profile page / unlisted link / private
58     ? source hits retention deadline ? auto-delete
59     ? library overflow ? eviction policy (with grace)
60     ```
61
62     A Gmail-style **quota meter** is permanent UI. Profile = `khelesutra.guru/@handle`: reel
gallery,
63     view counts (feeds `least_visited`), sport tags....
[/external_agent_tool_result]

```

786. assistant (2026-07-02T06:11:33.435Z)

Now I have everything I need. The picture after syncing to head (`15e4e0e`):

```

- **The code WIP already merged as #109** ? nothing to rescue there.
- **`docs/STORAGE_SHARING_MODEL.md`** ? a real 190-line strategy design doc (DRAFT, owner co-
design pending). Genuine work ? belongs on a branch + docs PR, like #104/#105/#106.
- **`arial.ttf`** ? confirmed junk: the shipped watermark font is
`backend/assets/fonts/RobotoSlab-Regular.ttf` (#103); this root file is a leftover from the
`scratch/repro_drawtext_font.py` experiments ? move to `scratch/`.
- **`config.json`** ? three local run-knobs from the 2026-06-13 GPU run. `timeout_sec=7200` and
`min_shot_count=8` are obviously one-off (that match's ">7 shots" request); but
`default_segmenter: gemini?wasb_hybrid` could be a genuine preference shift. That one's your
call:

```

787. assistant (2026-07-02T06:11:33.435Z)

```

[external_agent_tool_call: AskUserQuestion]
input: {"questions":[{"question":"config.json has uncommitted run-knobs from the 4K GPU run
(default_segmenter gemini?wasb_hybrid, wasb.timeout_sec 1800?7200, stitching.min_shot_count
1?8). How should I handle it while cleaning the
tree?","header":"config.json","multiSelect":false,"options":[{"label":"Revert all to committed
defaults","description":"Restore config.json to master's version (gemini / 1800 / 1). Cleanest
tree; the GPU-run settings stay recorded in the memory checkpoint if you need them again. Treats
all three as one-off run state."},{label":"Keep wasb_hybrid default, revert the
rest","description":"Commit default_segmenter=wasb_hybrid as an intentional shift to the owned
pipeline; revert timeout_sec?1800 and min_shot_count?1 (those are clearly per-run). Lands as its

```

```
own small config commit."},{ "label": "Move the whole diff to the branch", "description": "Park all three changes on the new branch alongside the doc, untouched, so nothing is decided now and master's tree is clean. You decide later via the PR."}]}}]
[/external_agent_tool_call]
```

788. assistant (2026-07-02T06:11:33.435Z)

```
[external_agent_tool_result]
The user did not answer the questions.
[/external_agent_tool_result]
```

789. assistant (2026-07-02T06:11:33.435Z)

I offered the choice and you didn't pick ? so I'll take the **safe, fully-recoverable** path: revert `config.json` to the committed defaults (the exact GPU-run values are already preserved in the memory checkpoint, so nothing is lost and re-applying `default\_segmenter: wasb\_hybrid` later is a one-liner). Doc goes to its own branch+PR; junk font to `scratch/`.

One safety check before moving `arial.ttf` ? confirm nothing tracked references it:

790. assistant (2026-07-02T06:11:33.435Z)

```
[external_agent_tool_call: PowerShell]
description: Confirm arial.ttf is unreferenced and check watermark font config
command: "=== any tracked reference to arial? ==="; $hits = git grep -i -l 'arial' -- ':!scratch' 2>$null; if ($hits) { $hits } else { "none in tracked files (excl. scratch)" }; "=== config.json watermark block (does it name a font file?) ==="; git show HEAD:config.json | Select-String -Pattern 'watermark|font|logo' -Context 0,6 | Select-Object -First 1
[/external_agent_tool_call]
```

791. assistant (2026-07-02T06:11:33.435Z)

```
[external_agent_tool_result]
=== any tracked reference to arial? ===
docs/archives/MONETIZATION_AUDIT.md
docs/archives/decisions/DECISIONS.md
docs/archives/quality-iterations/2026-06-human-gt-tuning/README.md
docs/archives/quality-iterations/README.md
docs/archives/research/OWNED_MODEL_TRAINING_STUDY.md

=== config.json watermark block (does it name a font file?) ===

>      "watermark": {
          "enabled": true,
          "text": "Generated by Khelsutra.guru",
          "position": "bottom-right",
          "opacity": 0.85,
[/external_agent_tool_result]
```

792. assistant (2026-07-02T06:11:33.435Z)

Those are substring false-positives ("adversarial" in the audit/decisions docs), and the watermark block has no font-path field ? it uses the committed RobotoSlab default in code. So `arial.ttf` is confirmed unreferenced junk. Executing the cleanup:

793. assistant (2026-07-02T06:11:33.435Z)

```
[external_agent_tool_call: PowerShell]
description: Move arial.ttf to scratch, revert config.json, show tree
command: cd C:\Users\avidu\Projects\badminton-highlight-indexer
```

1. Park the stray font in the scratch junk-drawer (reversible, non-destructive)

```
Move-Item -Path arial.ttf -Destination scratch\arial.ttf -Force
```

2. Revert the local run-knobs (exact values preserved in the memory checkpoint)

```
git restore config.json
"=== tree after font-move + config revert ==="; git status --short
[/external_agent_tool_call]
```

794. assistant (2026-07-02T06:11:33.435Z)

```

git commit -m '@'
docs(strategy): storage-priced sharing mental model (DRAFT, co-design pending)
```

Untracked working-tree draft (2026-06-12, owner brief) recovered into a branch during a working-tree cleanup. NOT ratified ? captures the storage-anchored monetization model (sell shelf space, model quality rides the tier; free = owned-model-only/never-Gemini), the two-tier source-vs-library object split, a pluggable EvictionPolicy registry, R2-zero-egress serving economics, the on-device USB-drive end-state, and a 14-item co-design agenda. If ratified it supersedes COMMERCIALIZATION.md's subscription framing -> record as an ADR then.

Recovered from an untracked working-tree draft during a tree cleanup (it had been sitting
uncommitted alongside the now-merged cache-hygiene WIP). **DRAFT ? owner co-design pending;
nothing here is ratified.**
```

What

```
`docs/STORAGE_SHARING_MODEL.md` (2026-06-12, owner brief) ? the storage-anchored monetization
mental model:
- **One-liner:** sell shelf space, let model quality ride the tier. Free = 2 GB + **owned-model-
only (never Gemini)**; paid = more shelf + best path.
- **Two-tier object model:** sources (transient processing inputs, retention deadline) vs
library (durable reels = the quota-counted product) ? also kills the free-CDN abuse vector.
- Pluggable `EvictionPolicy` registry (mirrors `segmenter_registry`), R2-zero-egress serving
economics, the on-device USB-drive end-state (where the Apache/MIT licensing guardrail becomes
the moat), and a 14-item co-design agenda.
- If ratified, **supersedes COMMERCIALIZATION.md's subscription framing** ? record as an ADR at
that point.
```

Docs only; matches the docs-PR pattern of #104/#105/#106. No code, no behavior change. **Owner-gated** ? for review/co-design, not auto-merge.

```
[external_agent_tool_result: error]  
<tool_use_error>String to replace not found in file.  
String: # Current state ? updated continuously (see [[working-agreement-checkpoints]])  
  
**Checkpoint:** 2026-06-13 (SYNC + HANDOFF REFRESH ? read-only reconciliation by a ramp-up  
session; no new code from  
(note: Edit also tried swapping \uXXXX escapes and their characters; neither form matched, so  
the mismatch is likely elsewhere in old_string. Re-read the file and copy the exact surrounding  
text.)</tool_use_error>  
[/external_agent_tool_result]
```

804. assistant (2026-07-02T06:11:33.436Z)

Master's tree is **clean** ? the doc is gone (lives on the branch now), `config.json` matches HEAD, and only the intentional `scratch/` + `artifacts/` carryovers remain (those were never part of the flagged WIP ? earlier sessions classified them as the designated local junk-drawer + the Gen-0 artifact bundle). Recording the resolution in memory:

805. assistant (2026-07-02T06:11:33.436Z)

```
[external_agent_tool_call: Edit]

```
[external_agent_tool_result]
1      ---
2      name: current-state
3      description: "Live micro-checkpoint state for Claude ? updated every checkpoint (not
only on request). What just landed, what's next, open decisions."
4      metadata:
5          node_type: memory
6          type: project
7          originSessionId: b13673cc-f087-43b1-9527-35dc0b67b301
8      ---
9
10     # Current state ? updated continuously (see [[working-agreement-checkpoints]])
11
12     **Checkpoint:** 2026-06-13 (CACHE HYGIENE shipped ? **PR #109 + docs #110 MERGED**,
master `15e4e0e`; + the ?5 reel +
13     manual cleanup). **#110** = diligence docs follow-up (README $Cache Hygiene + knobs +
tools/ line; CODE_MAP detector
14     self-clean, tools/cleanup_caches.py entry, common-task rows; min_shot_count API-parity
note) ? docs-only, CI 4/4 green.
15     Both repos now have **0 open PRs**. After the GX010125 E2E run left ~163 GB in WSL
`~/clips`, built a full cache-hygiene system (all on master):
16     (1) **self-cleaning runners** ? `indexing.{wasb,tracknet}.keep_frames` (default false)
deletes the frame cache +
17     staged video after a SUCCESSFUL run; on failure keeps them for resume; (2)
**tools/cleanup_caches.py** dry-run-first
18     ops tool (`--apply`/`--keep-video`/`--older-than`/`--include-wasbcache`/`--summary`);
(3) **disk guard** `min_free_gb`;
19     (4) **SessionStart nudge hook** in `.claude/settings.local.json` (local, gitignored).
Suite 409? **421 green**, ruff+mypy
20     clean. Policy saved ? [[cache-hygiene-policy]]. ? WSL-scan footgun: the owner's login
shell mangles `for e in ` loops
21     (loop var empty) ? use du/find arg-globbing. Also this session (earlier): merged
**#107** (API min_shot_count) + **#108**
22     (watermark Windows colon fix); ran GX010125 E2E on GPU ? **GX010125_highlights.mp4** (11
rallies >7 shots) +
23     **GX010125_highlights_min5.mp4** (24 rallies ?5, watermark now works ? validates #108)
via a stitch-only reuse script
24     (no re-inference); confirmed **Gemini got 1080p** (4K only at final stitch); delivered
an execution flowchart. Manual
25     WSL cleanup freed ~68 GB (kept GX010125's 93 GB frames + proxy per owner choice). ?
LOCAL uncommitted `config.json`:
[/external_agent_tool_result]
```

809. assistant (2026-07-02T06:11:33.436Z)

The sibling slate's checkpoint confirms my independent reconciliation exactly (#109/#110 merged, cache hygiene shipped, config.json was the local-uncommitted bit). Inserting my cleanup checkpoint above it without disturbing theirs:

814. assistant (2026-07-02T06:11:33.437Z)

Done ? the working tree is cleaned up, nothing lost, master untouched.

What I did

****Synced first:**** ``git pull --ff-only`` ? already at head `**`15e4e0e`` (#110)**. Crucially, this revealed that the cache-hygiene WIP I flagged last turn ****was already merged**** as ****#109**** ("self-cleaning pipeline + cleanup tool + disk guard") + docs ****#110**** by the slate that owned it ? so there was nothing to rescue there. Good thing I checked before acting, rather than branching stale duplicates.

****What actually remained uncommitted, and how I handled each:****

Item	What it was	Action
config.json	Local GPU-run knobs (<code>`default_segmenter?wasb_hybrid`</code> , <code>`timeout_sec?7200`</code> , <code>`min_shot_count?8`</code>)	**Reverted** to committed defaults (<code>`gemini`/`1800`/`1`</code>). Exact values preserved in the memory checkpoint ? fully recoverable.
arial.ttf	(root) Stray leftover from the watermark repro scripts ? the shipped font is the committed <code>`RobotoSlab-Regular.ttf`</code> (#103)	**Moved to `scratch/`** (reversible, not deleted)
docs/STORAGE_SHARING_MODEL.md	A genuine 190-line strategy doc (storage-anchored monetization, co-design pending)	**Branched + opened [PR #111](https://github.com/avidullu/badminton-highlight-indexer/pull/111)** (docs-only, owner-gated, CI green so far)
scratch/, artifacts/	The intentional local carryovers (handoffs, repro scripts, Gen-0 bundle)	**Left as-is** ? never part of the flagged WIP

Master's working tree now shows ****only**** those intentional carryovers; ``config.json`` matches HEAD.

Two things for you

1. **The config revert was the one judgment call** ? you didn't pick on the keep-vs-revert question, so I took the safe, reversible path. If `default_segmenter: wasb_hybrid` is meant to be your new standing default (not just that run), say so and I'll make it a clean one-line commit. The values are recorded in the checkpoint either way.

2. **tools.cleanup_caches** is live** (it shipped in #109) ? that's the tool the SessionStart hook is pointing at for the **96.5 GB of reclaimable cache**. Want me to run `python -m tools.cleanup_caches` (dry-run first) so you can see what it'd reclaim before `--apply`?

I can also gitignore `scratch/` + `artifacts/` if you'd like a truly pristine `git status` ? small follow-up, just didn't want to expand scope unasked. [PR #111](<https://github.com/avidullu/badminton-highlight-indexer/pull/111>) is yours to review/merge.
