Adversarial Claim Verifier (voter 3/3)

Be SKEPTICAL. Try to REFUTE this claim. ?2/3 refutations kill it.

Research question

Find promising AND reliable open-source tools/libraries for parsing Indian bank statement PDFs ? especially HDFC Bank savings/transaction statements ? into structured transaction rows (date, narration, ref, value date, withdrawal, deposit, closing balance), for reuse in a LOCAL-FIRST Python personal-finance tool ("muneem").

HARD CONSTRAINTS (a tool that violates these is unusable for us):

1. Must run 100% LOCALLY. Bank statements are highly sensitive ? NO cloud APIs, NO paid SaaS (e.g. bankstatementconverter.com, docparser, LLM extraction APIs). Paid/cloud is not acceptable even as a default.
2. Must be usable from Python.
3. License MUST be permissive & commercially safe: MIT, BSD, Apache-2.0, ISC, HPND. AVOID and explicitly FLAG anything GPL/LGPL/AGPL or that depends on copyleft native components ? in particular Camelot/tabula's reliance on Ghostscript (AGPL) or a Java runtime. PyMuPDF (AGPL) is already banned for us.

Specifically evaluate and compare these table-extraction approaches, for each giving: license (AND license of native deps), maintenance status (latest release + activity as of 2025/2026), reliability on SEMI-RULED / partially-borderless tables (HDFC's transaction table is not fully line-ruled), and password-protected-PDF support:

- pdfplumber (we already use it; MIT)
- Camelot ? camelot-py vs the maintained "pypdf_table_extraction" fork; its Ghostscript/OpenCV deps
- tabula-py (tabula-java + JVM)
- pypdfium2-based table extraction
- any other notable local options

Also assess the user's idea: "convert the PDF table to Excel/CSV first, then parse" ? is an intermediate CSV/Excel extraction more reliable than direct coordinate/text parsing, and which LOCAL+permissive tools do PDF?CSV/Excel table conversion well?

Finally, search for any existing, maintained, permissively-licensed open-source projects specifically for parsing Indian bank statements (HDFC/ICICI/SBI/Axis) or bank statements generally, that we could reuse or learn from (GitHub/PyPI).

Deliver a ranked shortlist of the most promising + reliable + license-safe options for HDFC statement parsing in a local Python tool, each with its license (and native-dep licenses), maintenance status, strengths/weaknesses for this use case, and a concrete recommendation for muneem (reuse library X vs. hand-roll coordinate clustering with pdfplumber). Cite sources.

Claim under review

"Camelot (the current 2.0.0rc1 / pypdf_table_extraction line served at camelot-py.readthedocs.io) is licensed under the permissive MIT license, satisfying muneem's commercial-safe license constraint for the Python library itself."

****Source:**** <https://camelot-py.readthedocs.io/> (primary)
****Supporting quote:**** "MIT License"

Copyright (c) 2019-2024 Camelot Developers Copyright (c) 2018-2019 Peeply Private Ltd (Singapore)

Permission is hereby granted, free of charge, to any person obtaining a copy of this software..."

Checklist

1. Is the claim actually supported by the quote, or is it an overreach/misread?
2. WebSearch for contradicting evidence ? does any credible source dispute or heavily qualify this?
3. Is the source quality sufficient for the claim's strength? (extraordinary claims need primary sources)
4. Is the claim outdated? (check dates ? old claims about fast-moving fields are suspect)
5. Is this a marketing claim / press release / cherry-picked benchmark / forum speculation?

****refuted=true**** if: unsupported by quote / contradicted / low-quality source for strong claim / outdated / marketing fluff.

****refuted=false**** ONLY if: claim is well-supported, current, and source quality matches claim strength.

Default to refuted=true if uncertain.

Structured output only. Evidence MUST be specific.

2. assistant (2026-05-30T19:16:36.517Z)

I'll verify this claim about Camelot's licensing. Let me start by checking the primary source and searching for any contradicting evidence.

3. assistant (2026-05-30T19:16:39.358Z)

Let me verify the claim from multiple angles. The claim is specifically about the LICENSE of the Camelot/pypdf_table_extraction Python library being MIT.

4. user (2026-05-30T19:16:40.796Z)

The server returned HTTP 404 Not Found.

The response body was not retrieved. If this URL requires authentication, use an authenticated tool (e.g. `gh` for GitHub, or an MCP-provided fetch tool) instead of WebFetch.

Web search results for query: "pypdf_table_extraction license MIT camelot fork pyproject"

Links: [{"title": "pypdf-table-extraction · PyPI", "url": "https://pypi.org/project/pypdf-table-extraction/"}, {"title": "GitHub - py-pdf/pypdf_table_extraction: A Python library to extract tabular data from PDFs · GitHub", "url": "https://github.com/py-pdf/pypdf_table_extraction"}, {"title": "Integration of Camelot in py-pdf · py-pdf/pypdf · Discussion #2466", "url": "https://github.com/py-pdf/pypdf/discussions/2466"}, {"title": "camelot-py · PyPI", "url": "https://pypi.org/project/camelot-py/"}, {"title": "GitHub - atlanhq/camelot: Camelot: PDF Table Extraction for Humans · GitHub", "url": "https://github.com/atlanhq/camelot"}, {"title": "GitHub - alexfazio/pypdf_table_extraction: A Python library to extract tabular data from PDFs", "url": "https://github.com/alexfazio/pypdf_table_extraction"}, {"title": "Camelot: PDF Table Extraction for Humans ? Camelot 2.0.0rc1 documentation", "url": "https://camelot-py.readthedocs.io/"}, {"title": "GitHub - camelot-dev/camelot: A Python library to extract tabular"}]

```
data from PDFs · GitHub", "url": "https://github.com/camelot-dev/camelot"}, {"title": "Introduction ? pypdf_table_extraction 1.0.2 documentation", "url": "https://pypdf-table-extraction.readthedocs.io/en/latest/user/intro.html"}, {"title": "Releases · py-pdf/pypdf_table_extraction", "url": "https://github.com/py-pdf/pypdf_table_extraction/releases"}]
```

Based on the search results, here's what I found about pypdf_table_extraction:

****License:**** This project is licensed under the MIT License.

****Camelot Fork Relationship:**** pypdf_table_extraction Formerly known as Camelot is a Python library that can help you extract tables from PDFs. More specifically, pypdf_table_extraction is the community maintained fork of Camelot, and it is a public archive forked from camelot-dev/camelot.

****Project Status:**** Camelot-py is the actively maintained successor to this library and provides robust PDF table extraction capabilities.

The search results show pypdf_table_extraction is available on PyPI and GitHub (under the py-pdf organization), but they don't contain specific information about the pyproject configuration file. You can find more details by visiting the GitHub repository at https://github.com/py-pdf/pypdf_table_extraction.

REMINDER: You MUST include the sources above in your response to the user using markdown hyperlinks.

6. assistant (2026-05-30T19:16:49.330Z)

The readthedocs root works (it shows 2.0.0rc1). Let me check the authoritative primary sources directly: the PyPI page and the GitHub LICENSE file for the actual library being served. The claim conflates two things ? let me verify carefully.

7. user (2026-05-30T19:16:53.641Z)

Camelot-py Information

****Latest Version:**** 1.0.9

****License Metadata:**** The exact license expression listed is "MIT" under the SPDX License Expression format.

****Latest Release Date:**** August 10, 2025

8. user (2026-05-30T19:16:54.268Z)

Camelot Documentation Information

****Exact Version:**** The title/header shows "Camelot 2.0.0rc1 documentation"

****Project Name:**** The project is called "Camelot" (not "pypdf_table_extraction")

****License Information:**** The documentation references "Camelot License" as a section topic within the Introduction guide, but the actual license text is not provided in the content shown. The page includes a link to the license section but does not display the specific license terms, copyright years, or holder names in the excerpt provided.

The page does note that various badges are displayed (including a license badge), but the verbatim license text itself is not reproduced in this web page content.

9. assistant (2026-05-30T19:16:58.288Z)

PyPI confirms camelot-py 1.0.9 is MIT-licensed. But there's a version discrepancy: the claim says "2.0.0rc1 / pypdf_table_extraction line" but PyPI shows latest stable is 1.0.9. Let me

check the actual LICENSE file in the source repos and the intro page that the docs link to, to confirm the MIT text and copyright holders.

10. user (2026-05-30T19:17:02.435Z)

MIT License

****License Type:**** MIT License

****Copyright Holders & Years:****

- Camelot Developers (2019-2024)
- Peeply Private Ltd (Singapore) (2018-2019)

****Key License Text:****

"Permission is hereby granted, free of charge, to any person obtaining a copy of this software and associated documentation files (the "Software"), to deal in the Software without restriction"

The license permits use, modification, distribution, and sublicensing of the software provided that the copyright notice and license text are retained in all copies or substantial portions of the work.

11. user (2026-05-30T19:17:02.437Z)

License Information

****License Type:**** "MIT License"

****Copyright Holders and Years:****

- "Copyright (c) 2024 pypdf_table_extraction Developers"
- "Copyright (c) 2019-2023 Camelot Developers"
- "Copyright (c) 2018-2019 Peeply Private Ltd (Singapore)"

12. assistant (2026-05-30T19:17:06.511Z)

Both source repos confirm MIT License. The supporting quote in the claim ("Copyright (c) 2019-2024 Camelot Developers / Copyright (c) 2018-2019 Peeply Private Ltd") matches the `camelot-dev/camelot` LICENSE file exactly. Let me verify the 2.0.0rc1 version detail and that the readthedocs site indeed serves that version, plus check the GitHub repo's stated license badge to be thorough.

13. user (2026-05-30T19:17:11.218Z)

Camelot Repository Analysis

****License:****

The repository states MIT License. The README indicates "This project is licensed under the MIT License, see the LICENSE file for details."

****Latest Release:****

The latest version shown is ****v1.0.9**** (released August 10, 2025). There is no release candidate version like 2.0.0rc1 visible in the provided content.

****Official Documentation:****

Yes, camelot-py.readthedocs.io appears to be the official documentation site. The README explicitly states: "The documentation is available at <http://camelot-py.readthedocs.io/>" and multiple badge links throughout the page reference this domain as the authoritative documentation source.

14. user (2026-05-30T19:17:12.964Z)

I cannot answer your questions based on the provided content. The web page excerpt contains only

a generic error message stating that "A required part of this site couldn't load."

This error message does not contain any information about:

- Whether camelot-py version 2.0.0rc1 exists
- License classifiers or metadata for that version
- The release date

To find this information, you would need to access the actual package repository (such as PyPI) or the project's official documentation directly.

15. assistant (2026-05-30T19:17:15.802Z)

I have enough to assess this. Let me do one final check on the version discrepancy ? whether 2.0.0rc1 actually exists as a released artifact ? via PyPI JSON, since this is the one detail in the claim that doesn't match the stable release.

16. user (2026-05-30T19:17:20.671Z)

Camelot-py Release Information

Available Release Versions

Yes, "2.0.0rc1" exists. The package has numerous releases spanning from 0.1.1 (2018) through the current stable version. Notable versions include:

- **1.0.9** (August 10, 2025) - Latest stable release
- **1.0.0** (December 30, 2024)
- **2.0.0rc1** (May 25, 2026) - Release candidate for next major version

License Information

The `info.license` field shows: **MIT**

The license expression is similarly stated as: **MIT**

License classifiers are not explicitly listed in the standard classifier section; however, the package metadata includes a LICENSE file reference.

Latest Version

The **latest stable version is 1.0.9**, released on August 10, 2025. This version requires Python ≥ 3.8 and is available as both a wheel and source distribution.

(Note: The 2.0.0rc1 exists but is a pre-release candidate, not a stable release.)

17. assistant (2026-05-30T19:17:33.554Z)

I now have comprehensive evidence to evaluate the claim. Let me assess.

The claim states: "Camelot (the current 2.0.0rc1 / pypdf_table_extraction line served at camelot-py.readthedocs.io) is licensed under the permissive MIT License, satisfying muneem's commercial-safe license constraint for the Python library itself."

Verification findings:

1. **License is genuinely MIT** ? Confirmed across four independent primary sources:
 - PyPI metadata for camelot-py: `info.license` = "MIT", SPDX expression "MIT" (latest stable 1.0.9, Aug 2025)
 - `camelot-dev/camelot` LICENSE file: MIT, "Copyright (c) 2019-2024 Camelot Developers / Copyright (c) 2018-2019 Peeple Private Ltd (Singapore)" ? matches the claim's supporting quote verbatim
 - `py-pdf/pypdf_table_extraction` LICENSE file: MIT, "Copyright (c) 2024

pypdf_table_extraction Developers / 2019-2023 Camelot Developers / 2018-2019 Peeply Private Ltd"
- GitHub repo About/README: "licensed under the MIT License"

2. ****The supporting quote matches**** the actual `camelot-dev/camelot` LICENSE file exactly ? not fabricated or misread.

3. ****2.0.0rc1 exists**** ? PyPI confirms camelot-py 2.0.0rc1 was published 2026-05-25 (a pre-release; latest **stable** is 1.0.9). The docs at camelot-py.readthedocs.io do show "Camelot 2.0.0rc1". So the version reference is accurate, with the minor caveat that rc1 is a release candidate, not stable.

Minor imprecisions that do NOT refute the core licensing claim:

- The claim slightly conflates "Camelot" (camelot-dev/camelot, the line that publishes camelot-py and serves camelot-py.readthedocs.io, copyright "2019-2024") with "pypdf_table_extraction" (the py-pdf fork, copyright "2024 pypdf_table_extraction Developers", separate docs at pypdf-table-extraction.readthedocs.io). They are related but distinct repos. However, ****both are MIT****, so the conflation doesn't affect the licensing conclusion.
- The claim is carefully scoped to "the Python library itself" and does NOT assert the native deps (Ghostscript/OpenCV) are MIT ? so it sidesteps the AGPL-Ghostscript concern that is muneem's real disqualifier. The claim as written is narrow and accurate.

The licensing claim is well-supported by multiple primary sources, current (verified May 2026), and the source quality (official LICENSE files + PyPI metadata) matches the claim strength. I could not refute it.

18. user (2026-05-30T19:17:41.742Z)

Structured output provided successfully

19. assistant (2026-05-30T19:17:48.188Z)

Verification complete. The claim survives scrutiny ? refuted=false with high confidence.

The licensing assertion ("Camelot's Python library is MIT-licensed") is confirmed by four independent primary sources (PyPI metadata, both repos' LICENSE files, and the GitHub About badge), and the claim's supporting quote matches the `camelot-dev/camelot` LICENSE file verbatim. The version detail also checks out: camelot-py 2.0.0rc1 was published 2026-05-25 and the docs render "Camelot 2.0.0rc1".

Two minor imprecisions noted but they don't undermine the claim: it loosely conflates "Camelot" with the separate `pypdf\_table\_extraction` fork (both MIT anyway), and 2.0.0rc1 is a release candidate rather than the latest stable (1.0.9). Importantly, the claim is carefully scoped to "the Python library itself" and does not assert the native deps are MIT ? so it never makes the false move of claiming Camelot is fully license-safe for muneem despite its Ghostscript (AGPL) / OpenCV dependencies.
