Source Extractor

Research question: "Find promising AND reliable open-source tools/libraries for parsing Indian bank statement PDFs ? especially HDFC Bank savings/transaction statements ? into structured transaction rows (date, narration, ref, value date, withdrawal, deposit, closing balance), for reuse in a LOCAL-FIRST Python personal-finance tool ("muneem").

HARD CONSTRAINTS (a tool that violates these is unusable for us):

1. Must run 100% LOCALLY. Bank statements are highly sensitive ? NO cloud APIs, NO paid SaaS (e.g. bankstatementconverter.com, docparser, LLM extraction APIs). Paid/cloud is not acceptable even as a default.
2. Must be usable from Python.
3. License MUST be permissive & commercially safe: MIT, BSD, Apache-2.0, ISC, HPND. AVOID and explicitly FLAG anything GPL/LGPL/AGPL or that depends on copyleft native components ? in particular Camelot/tabula's reliance on Ghostscript (AGPL) or a Java runtime. PyMuPDF (AGPL) is already banned for us.

Specifically evaluate and compare these table-extraction approaches, for each giving: license (AND license of native deps), maintenance status (latest release + activity as of 2025/2026), reliability on SEMI-RULED / partially-borderless tables (HDFC's transaction table is not fully line-ruled), and password-protected-PDF support:

- pdfplumber (we already use it; MIT)
- Camelot ? camelot-py vs the maintained "pypdf_table_extraction" fork; its Ghostscript/OpenCV deps
- tabula-py (tabula-java + JVM)
- pypdfium2-based table extraction
- any other notable local options

Also assess the user's idea: "convert the PDF table to Excel/CSV first, then parse" ? is an intermediate CSV/Excel extraction more reliable than direct coordinate/text parsing, and which LOCAL+permissive tools do PDF?CSV/Excel table conversion well?

Finally, search for any existing, maintained, permissively-licensed open-source projects specifically for parsing Indian bank statements (HDFC/ICICI/SBI/Axis) or bank statements generally, that we could reuse or learn from (GitHub/PyPI).

Deliver a ranked shortlist of the most promising + reliable + license-safe options for HDFC statement parsing in a local Python tool, each with its license (and native-dep licenses), maintenance status, strengths/weaknesses for this use case, and a concrete recommendation for muneem (reuse library X vs. hand-roll coordinate clustering with pdfplumber). Cite sources."

Fetch and extract key claims from this source:

```
**URL:** https://github.com/py-pdf/pypdf_table_extraction  
**Title:** py-pdf/pypdf_table_extraction ? community-maintained Camelot fork (MIT)  
**Found via:** technical reliability ? semi-ruled tables search
```

Task

1. Use WebFetch to retrieve the page content.
2. Assess source quality: primary research/institution? secondary reporting? blog/opinion? forum? unreliable?
3. Extract 2-5 FALSIFIABLE claims that bear on the research question. Each claim must:
 - be a concrete, checkable statement (not vague generalities)
 - include a direct quote from the source as support
 - be rated central/supporting/tangential to the research question
4. Note publish date if available.

If the fetch fails or the page is irrelevant/paywalled, return claims: [] and sourceQuality: "unreliable".

Structured output only.

2. assistant (2026-05-30T19:12:22.566Z)

I'll fetch the GitHub page for the pypdf_table_extraction project.

pypdf_table_extraction Project Analysis

(1) License

"This project is licensed under the MIT License, see the LICENSE file for details."

(2) Native Dependencies & Their Licenses

The page mentions required dependencies but doesn't specify their licenses:

- **Tk** (Python tkinter package)
- **Ghostscript** - a PostScript/PDF interpreter

The installation instructions state: "After installing the dependencies (tk and ghostscript)..."

No license information for these dependencies is provided in this content.

(3) Maintenance Status

Status: DEPRECATED - "This project is deprecated and no longer actively maintained."

- **Latest Release:** V1.0.2 (Apr 2, 2025)
- **Stars:** 66
- **Repository Activity:** Archived by owner on Apr 11, 2025; now read-only
- **Recommendation:** Users are directed to use "camelot-py instead"

(4) Fork & Relationship to Camelot

Yes, this is explicitly a fork: "forked from camelot-dev/camelot"

The project states: "Camelot-py is the actively maintained successor to this library and provides robust PDF table extraction capabilities."

(5) Table Type Support

Not documented in the provided content. No mention of lattice vs. stream parsing modes.

(6) Password-Protected PDFs

Not mentioned in the provided content.

(7) Export Formats

Yes: "You can also export tables to multiple formats, which include CSV, JSON, Excel, HTML, Markdown, and Sqlite."

(8) Python Version & Installation Notes

Specific Python version requirements are not stated in this excerpt. Installation methods listed:

- conda
- pip (after installing dependencies)
- From source code via git clone

4. assistant (2026-05-30T19:12:40.351Z)

This is interesting and important. The page reveals this fork has now been deprecated and archived, with users directed back to camelot-py. Let me verify the deprecation status and key details by fetching more specifics, since this materially changes the recommendation.

5. user (2026-05-30T19:12:45.857Z)

pypdf_table_extraction Repository Status

Deprecation Notice

The exact deprecation text states: `***This project is deprecated and no longer actively maintained.***`

Recommended Alternative

Users should migrate to: "Please use [camelot-py](https://github.com/camelot-dev/camelot) instead."

The README explains that "Camelot-py is the actively maintained successor to this library and provides robust PDF table extraction capabilities."

Archive Information

The repository was archived on `**April 11, 2025**`, and is now read-only.

Project Relationship

This library was "Formerly known as [Camelot](https://github.com/camelot-dev/camelot)" and was forked from [camelot-dev/camelot](https://github.com/camelot-dev/camelot).

System Dependencies

Installation requires: "tk and ghostscript" as stated in the installation instructions referencing "installing the dependencies."

Latest Release

`**Version:** V1.0.2`

`**Release Date:** April 2, 2025`

6. assistant (2026-05-30T19:12:51.881Z)

I have the key facts confirmed. The page reveals a critical finding: this fork ? which was the "maintained Camelot fork" the search surfaced ? has been deprecated and archived as of April 2025, redirecting users back to camelot-py. This is a primary source (the project's own GitHub repository).

Let me note the key facts for the research question:

- This was forked specifically to avoid PyMuPDF's AGPL dependency (a known motivation for the py-pdf fork), but that nuance isn't on this page ? I should only claim what's verified.
- It still requires Ghostscript, which is the AGPL native dependency the research question explicitly flags as a problem.
- It's MIT licensed itself.
- Deprecated/archived April 2025, redirects to camelot-py.

I have everything needed.

7. user (2026-05-30T19:12:58.962Z)

Structured output provided successfully

8. assistant (2026-05-30T19:13:03.001Z)

Structured output submitted. Key finding: the "maintained Camelot fork" surfaced by the search has in fact been deprecated and archived (April 11, 2025), redirecting users back to camelot-py ? and it still depends on Ghostscript (AGPL), making it license-unsafe for muneem despite its own MIT license.
