Adversarial Claim Verifier (voter 3/3)

Be SKEPTICAL. Try to REFUTE this claim. ?2/3 refutations kill it.

Research question

Find promising AND reliable open-source tools/libraries for parsing Indian bank statement PDFs ? especially HDFC Bank savings/transaction statements ? into structured transaction rows (date, narration, ref, value date, withdrawal, deposit, closing balance), for reuse in a LOCAL-FIRST Python personal-finance tool ("muneem").

HARD CONSTRAINTS (a tool that violates these is unusable for us):

1. Must run 100% LOCALLY. Bank statements are highly sensitive ? NO cloud APIs, NO paid SaaS (e.g. bankstatementconverter.com, docparser, LLM extraction APIs). Paid/cloud is not acceptable even as a default.
2. Must be usable from Python.
3. License MUST be permissive & commercially safe: MIT, BSD, Apache-2.0, ISC, HPND. AVOID and explicitly FLAG anything GPL/LGPL/AGPL or that depends on copyleft native components ? in particular Camelot/tabula's reliance on Ghostscript (AGPL) or a Java runtime. PyMuPDF (AGPL) is already banned for us.

Specifically evaluate and compare these table-extraction approaches, for each giving: license (AND license of native deps), maintenance status (latest release + activity as of 2025/2026), reliability on SEMI-RULED / partially-borderless tables (HDFC's transaction table is not fully line-ruled), and password-protected-PDF support:

- pdfplumber (we already use it; MIT)
- Camelot ? camelot-py vs the maintained "pypdf_table_extraction" fork; its Ghostscript/OpenCV deps
- tabula-py (tabula-java + JVM)
- pypdfium2-based table extraction
- any other notable local options

Also assess the user's idea: "convert the PDF table to Excel/CSV first, then parse" ? is an intermediate CSV/Excel extraction more reliable than direct coordinate/text parsing, and which LOCAL+permissive tools do PDF?CSV/Excel table conversion well?

Finally, search for any existing, maintained, permissively-licensed open-source projects specifically for parsing Indian bank statements (HDFC/ICICI/SBI/Axis) or bank statements generally, that we could reuse or learn from (GitHub/PyPI).

Deliver a ranked shortlist of the most promising + reliable + license-safe options for HDFC statement parsing in a local Python tool, each with its license (and native-dep licenses), maintenance status, strengths/weaknesses for this use case, and a concrete recommendation for muneem (reuse library X vs. hand-roll coordinate clustering with pdfplumber). Cite sources.

Claim under review

"xaneem/hdfc-credit-card-statement-parser parses HDFC Bank CREDIT CARD statements specifically (not savings/transaction statements), extracting structured fields including date, narration, amount, Cr/Dr indicator, and forex amount/rate."

****Source:**** <https://github.com/xaneem/hdfc-credit-card-statement-parser> (primary)

****Supporting quote:**** "Extracts information from an HDFC Bank Credit Card statement."

Checklist

1. Is the claim actually supported by the quote, or is it an overreach/misread?
2. WebSearch for contradicting evidence ? does any credible source dispute or heavily qualify this?
3. Is the source quality sufficient for the claim's strength? (extraordinary claims need primary sources)
4. Is the claim outdated? (check dates ? old claims about fast-moving fields are suspect)
5. Is this a marketing claim / press release / cherry-picked benchmark / forum speculation?

****refuted=true**** if: unsupported by quote / contradicted / low-quality source for strong claim / outdated / marketing fluff.

****refuted=false**** ONLY if: claim is well-supported, current, and source quality matches claim strength.

Default to refuted=true if uncertain.

Structured output only. Evidence MUST be specific.

2. assistant (2026-05-30T19:17:56.054Z)

I'll verify this claim about the xaneem/hdfc-credit-card-statement-parser repository. Let me start by loading the web tools and examining the primary source.

3. assistant (2026-05-30T19:17:59.410Z)

Let me fetch the primary source repository to verify the specific claims.

4. user (2026-05-30T19:18:04.973Z)

HDFC Bank Credit Card Statement Parser

****What it parses:****

This tool specifically parses HDFC Bank credit card statements (India). Per the README: "Extracts information from an HDFC Bank Credit Card statement."

****Structured fields extracted:****

The tool extracts transaction data including date, narration/description, amount, and Cr/Dr indicators. For international purchases, it also captures "Forex Amount and Forex Rate."

****Programming language:****

Python (97.7%), with a small Shell component (2.3%)

****License:****

MIT License

****Latest activity:****

The repository shows 8 commits total on the main branch, but no releases have been published. Specific commit/release dates are not displayed in the provided content.

****Important caveat:****

The tool includes this disclaimer: "This was built for personal use and does not guarantee accuracy. Always cross check extracted data with your pdf for mistakes."

5. user (2026-05-30T19:18:09.563Z)

Web search results for query: "xaneem hdfc-credit-card-statement-parser github"

Based on the search results, I found the GitHub repository you're looking for:

The xaneem/hdfc-credit-card-statement-parser repository extracts information from an HDFC Bank Credit Card Statement (India). This helps copy structured data out of your statement.

****Key features:****

- It extracts both Indian and Foreign transactions, with Forex Amount and Forex Rate also extracted for Foreign transactions
- The output is saved as a CSV file

****Important note:**** This was built for personal use and does not guarantee accuracy, so you should cross check the data and make sure the extracted information is correct.

The repository is located at: <https://github.com/xaneem/hdfc-credit-card-statement-parser>

REMINDER: You MUST include the sources above in your response to the user using markdown hyperlinks.

6. assistant (2026-05-30T19:18:12.457Z)

The WebFetch confirms the main points. Let me verify the specific field claims directly from the README and the example output CSV to confirm the exact fields (date, narration, amount, Cr/Dr, forex amount/rate) are all genuinely extracted, not just asserted.

HDFC Bank Credit Card Statement Parser Analysis

****Full README Quote:****

The README states: "Extracts information from an HDFC Bank Credit Card statement. This will help copy structured data out of your statement."

****What it extracts:****

The tool specifically mentions extracting:

- "both Indian and Foreign transactions"
- "Forex Amount and Forex Rate" for foreign transactions
- "Cr/Dr column"

The README does not explicitly list date, narration, or amount as extracted fields, though the

sample output reference to "example-output.csv" suggests these are likely included. The documentation is somewhat sparse about the complete field inventory.

****Statement type:****

Yes, it is specifically designed for "HDFC Bank Credit Card statement" processing, as stated in the title and opening description.

8. user (2026-05-30T19:18:17.528Z)

CSV Column Headers and Structure

****Column Headers:****

"date,currency,description,forex_amount,forex_rate,amount,type"

****First 3 Data Rows:****

1. "11/08/2021 13:40,INR,NETBANKING TRANSFER,,,"40,146.00",Cr"

2. "12/08/2021,INR,GOOGLE CLOUDS MUMBAI,,,2,Cr"

3. "16/08/2021,INR,MICROSOFT INDIA MUMBAI,,,2,Cr"

****Fields Present:****

- ****date**** ? Transaction timestamp
- ****currency**** ? Currency code (INR/USD)
- ****description**** ? Transaction details/merchant info
- ****forex_amount**** ? Foreign exchange amount
- ****forex_rate**** ? Currency conversion rate
- ****amount**** ? Transaction value in specified currency
- ****type**** ? Credit (Cr) or Debit (Dr) indicator

9. assistant (2026-05-30T19:18:30.949Z)

I have direct primary-source evidence. The claim is fully corroborated by the repository's README and the example-output.csv. Let me cross-check each element:

****Claim breakdown vs. evidence:****

1. ****"parses HDFC Bank CREDIT CARD statements specifically (not savings/transaction statements)"**** ? CONFIRMED. README title and opening line: "Extracts information from an HDFC Bank Credit Card statement." Repo name is `hdfc-credit-card-statement-parser`. Nothing indicates savings/transaction statements.

2. ****"date, narration, amount, Cr/Dr indicator, and forex amount/rate"**** ? CONFIRMED via the actual CSV column headers: `date,currency,description,forex\_amount,forex\_rate,amount,type`.

Mapping:

- date ? `date` ?
- narration ? `description` (README says "narration"; CSV header is "description" ? semantically equivalent merchant/transaction text) ?
- amount ? `amount` ?
- Cr/Dr indicator ? `type` column (values "Cr"/"Dr"); README explicitly mentions "Cr/Dr column" ?
- forex amount/rate ? `forex\_amount`, `forex\_rate`; README explicitly mentions "Forex Amount and Forex Rate" ?

The supporting quote ("Extracts information from an HDFC Bank Credit Card statement") supports the core "credit card statement" portion, and the deeper README + CSV evidence supports the specific field list.

****Skeptical checks:****

- ***Source quality:** Primary source (the repo itself + its own example output). This is the strongest possible evidence for a claim about what a repo does. Not marketing ? it's the artifact itself.

- **Overreach?** The only minor nuance: claim says "narration" but the CSV column is literally "description." This is a faithful paraphrase, not a misread ? the README does describe extracting transaction info, and the field is the transaction text. Not a refutation.
- **Outdated?** The claim is about what the tool does, not a fast-moving fact. Example data is from 2021, repo is small (8 commits, no releases, personal-use disclaimer). This bears on the **reliability/maintenance** of the tool for muneem ? but the **claim under review** is only about WHAT it parses and WHICH fields, both of which are accurate. The claim does not assert maintenance level or reliability.
- **Contradiction?** No source disputes it. The disclaimer ("does not guarantee accuracy") qualifies reliability but not the field/scope claim.

The claim is well-supported by primary sources, current, and accurate. The only caveat (a maintenance/reliability concern, low commit count, no releases, personal-use disclaimer) does not touch the specific assertions made. The claim survives.

10. user (2026-05-30T19:18:37.506Z)

Structured output provided successfully

11. assistant (2026-05-30T19:18:41.276Z)

The claim has been verified and is NOT refuted. Primary-source evidence (the repository README and its own `example-output.csv`) fully corroborates every element: the tool parses HDFC Bank credit card statements specifically, and extracts date, description (narration), amount, type (Cr/Dr), and forex_amount/forex_rate. The only caveat ? low maintenance and a personal-use disclaimer ? affects the tool's **reliability for reuse** but does not contradict the specific claim about what it parses and which fields it extracts.
