Source Extractor

Research question: "Find promising AND reliable open-source tools/libraries for parsing Indian bank statement PDFs ? especially HDFC Bank savings/transaction statements ? into structured transaction rows (date, narration, ref, value date, withdrawal, deposit, closing balance), for reuse in a LOCAL-FIRST Python personal-finance tool ("muneem").

HARD CONSTRAINTS (a tool that violates these is unusable for us):

1. Must run 100% LOCALLY. Bank statements are highly sensitive ? NO cloud APIs, NO paid SaaS (e.g. bankstatementconverter.com, docparser, LLM extraction APIs). Paid/cloud is not acceptable even as a default.
2. Must be usable from Python.
3. License MUST be permissive & commercially safe: MIT, BSD, Apache-2.0, ISC, HPND. AVOID and explicitly FLAG anything GPL/LGPL/AGPL or that depends on copyleft native components ? in particular Camelot/tabula's reliance on Ghostscript (AGPL) or a Java runtime. PyMuPDF (AGPL) is already banned for us.

Specifically evaluate and compare these table-extraction approaches, for each giving: license (AND license of native deps), maintenance status (latest release + activity as of 2025/2026), reliability on SEMI-RULED / partially-borderless tables (HDFC's transaction table is not fully line-ruled), and password-protected-PDF support:

- pdfplumber (we already use it; MIT)
- Camelot ? camelot-py vs the maintained "pypdf_table_extraction" fork; its Ghostscript/OpenCV deps
- tabula-py (tabula-java + JVM)
- pypdfium2-based table extraction
- any other notable local options

Also assess the user's idea: "convert the PDF table to Excel/CSV first, then parse" ? is an intermediate CSV/Excel extraction more reliable than direct coordinate/text parsing, and which LOCAL+permissive tools do PDF?CSV/Excel table conversion well?

Finally, search for any existing, maintained, permissively-licensed open-source projects specifically for parsing Indian bank statements (HDFC/ICICI/SBI/Axis) or bank statements generally, that we could reuse or learn from (GitHub/PyPI).

Deliver a ranked shortlist of the most promising + reliable + license-safe options for HDFC statement parsing in a local Python tool, each with its license (and native-dep licenses), maintenance status, strengths/weaknesses for this use case, and a concrete recommendation for muneem (reuse library X vs. hand-roll coordinate clustering with pdfplumber). Cite sources."

Fetch and extract key claims from this source:

```
**URL:** https://github.com/py-pdf/pypdf/discussions/2466#camelot-license-incompat  
**Title:** Camelot MIT vs Ghostscript GPL/AGPL incompatibility (search-surfaced detail)
```

****Found via:**** license/dependency risk ? copyleft native deps search

Task

1. Use WebFetch to retrieve the page content.
2. Assess source quality: primary research/institution? secondary reporting? blog/opinion? forum? unreliable?
3. Extract 2-5 FALSIFIABLE claims that bear on the research question. Each claim must:
 - be a concrete, checkable statement (not vague generalities)
 - include a direct quote from the source as support
 - be rated central/supporting/tangential to the research question
4. Note publish date if available.

If the fetch fails or the page is irrelevant/paywalled, return claims: [] and sourceQuality: "unreliable".

Structured output only.

2. assistant (2026-05-30T19:11:55.070Z)

I'll fetch the GitHub discussion page to assess its content and extract relevant claims.

3. assistant (2026-05-30T19:11:58.120Z)

I'll fetch the URL. Note the URL has an anchor fragment `#camelot-license-incompat` which is unusual for a GitHub discussion ? I'll try fetching it.

4. user (2026-05-30T19:12:04.532Z)

Analysis of GitHub Discussion #2466

****Page Title:**** Integration of Camelot in py-pdf · py-pdf pypdf · Discussion #2466 · GitHub

****Discussion Date:**** February 23-24, 2024

****Participants:**** MartinThoma, stefan6419846, bosd, Lucas-C

Findings

(1) Camelot's License

No explicit statement about Camelot's license appears in this discussion.

(2) Ghostscript License & Compatibility

Stefan6419846 mentions Ghostscript as a dependency but does not discuss its licensing terms or compatibility issues with permissive/MIT licenses.

(3) Camelot's Dependency on Ghostscript

****Stefan6419846 states:**** "Ghostscript apparently is optional for Camelot (used for OCR-based 'Lattice approach')"

(4) Tabula's Java/JVM Dependency

Tabula is not mentioned in this discussion.

(5) PyMuPDF Licensing

****Stefan6419846 notes:**** "PyMuPDF (with its restrictive AGPL license)" and later clarifies: "The only thing which makes it hard to use PyMuPDF is the strong copyleft effect (unless using the paid variant)"

(6) License Compatibility Discussion

No direct discussion of license compatibility between table extraction libraries occurs in this thread. The focus remains on functionality and integration rather than licensing concerns.

5. assistant (2026-05-30T19:12:08.266Z)

Let me get the full discussion text to capture the exact statements and verify the context, since the summary indicates the anchor fragment was fabricated (the discussion is about Camelot integration, not specifically a license-incompat section).

6. user (2026-05-30T19:12:14.730Z)

Sentences Mentioning Specified Terms

****Ghostscript:****

"Ghostscript apparently is optional for Camelot (used for OCR-based 'Lattice approach')."

****AGPL/Copyleft/License:****

"PyMuPDF (with its restrictive AGPL license) added table extraction support about 6 months ago."

"The only thing which makes it hard to use PyMuPDF is the strong copyleft effect (unless using the paid variant)."

****PyMuPDF:****

"By the way: PyMuPDF (with its restrictive AGPL license) added table extraction support about 6 months ago."

"They apparently decided to base their initial implementation on pdfplumber."

****Camelot Dependencies:****

"According to the docs the dependency chain is not too big.. Only Ghostscript and tkinter."

"[E]specially numpy and pandas can make this a bit heavier."

Discussion Conclusion

The discussion ****concludes favorably**** toward integrating Camelot into py-pdf. The participants agreed to fork Camelot into the py-pdf organization under the new name `pypdf\_table\_extraction`. The main reasoning: maintaining the tool under community stewardship while keeping dependencies optional to avoid burdening users who don't need table extraction features.

7. assistant (2026-05-30T19:12:21.574Z)

I now have a clear picture of the source. Let me assess what I've found.

The URL's anchor fragment (`#camelot-license-incompat`) and the "Found via" framing suggest a specific claim about Camelot-MIT vs Ghostscript-AGPL incompatibility. The actual discussion (#2466, "Integration of Camelot in py-pdf", Feb 2024) is the origin thread for the `pypdf\_table\_extraction` fork. It does NOT contain an explicit "Camelot MIT vs Ghostscript GPL/AGPL incompatibility" claim ? that framing appears fabricated in the anchor. However, the discussion DOES contain falsifiable claims directly relevant to the research question: that Ghostscript is an optional Camelot dependency, that Camelot's dependency chain is "only Ghostscript and tkinter," that PyMuPDF is AGPL with a strong copyleft effect, and that the fork happened. These are all on-point for the muneem license/dependency-risk evaluation.

This is a primary source ? the actual maintainer discussion thread, with statements by the pypdf maintainer (MartinThoma) and a core contributor (stefan6419846).

Structured output provided successfully

9. assistant (2026-05-30T19:12:40.226Z)

I've completed the source analysis. Summary of findings:

****Source:**** GitHub Discussion #2466 "Integration of Camelot in py-pdf" (Feb 23-24, 2024), participants MartinThoma (pypdf maintainer), stefan6419846, bosd, Lucas-C. ****Quality: primary**** ? it is the actual maintainer thread that originated the `pypdf\_table\_extraction` fork.

****Important caveat on the URL:**** The anchor fragment `#camelot-license-incompat` and the "Title" given in the task ("Camelot MIT vs Ghostscript GPL/AGPL incompatibility") are ****not supported by the page****. The discussion contains no explicit "MIT vs AGPL incompatibility" assertion ? that framing appears to have been fabricated/inferred by whatever surfaced the link. The page does not discuss Ghostscript's license at all, nor Camelot's own license. I flagged this by extracting only what the page actually says.

****What the page does support (extracted as 4-5 falsifiable claims):****

- It is the origin of the `pypdf\_table\_extraction` fork (central ? establishes that fork's provenance for muneem's evaluation).
- Ghostscript is described as ****optional**** for Camelot, used for the Lattice approach (central ? directly bears on whether muneem can use Camelot/the fork while avoiding the AGPL/GPL Ghostscript dependency).
- Camelot's dependency chain is "only Ghostscript and tkinter" plus numpy/pandas weight (supporting ? characterizes the native-dep footprint to vet).
- PyMuPDF is AGPL with a "strong copyleft effect" unless paid (supporting ? corroborates muneem's existing PyMuPDF ban).
- PyMuPDF's table extraction was built on pdfplumber (tangential ? signals pdfplumber maturity).

All output delivered via the StructuredOutput tool.
