CONTEXT ? two sibling repos on a Windows machine:

- INDEXER: C:/Users/avidu/Projects/badminton-highlight-indexer ? local AI badminton(->racket-sports) highlight indexer + rally detector. FastAPI + SQLite + ffmpeg + GPU CV via WSL; Gemini = paid cloud AI. docs/ tree is rich. Current branch docs/next-steps-multisport (master = main branch).

- COLLECTOR: C:/Users/avidu/Projects/sports-data-collector ? golden-label acquisition/curation/ingestion CLI (system-of-record candidate for training corpus).

Project state (June 2026): scaffolding complete; owned-model roadmap agreed (docs/OWNED_MODEL_IMPLEMENTATION_PLAN.md) but NO platform/owned-model implementation started; next committed platform slice = async job model. Licensing guardrail: MIT/Apache-2.0/BSD only for code+data+weights; paid LLMs are inference-only, never training-data sources. ENVIRONMENT RULES: this dev environment has NO GPU/torch/cv2 ? do NOT attempt to run the video pipeline or import torch/cv2 modules. Test suites are offline/fully-mocked and SAFE to run. You are READ-ONLY: never edit/create/delete repo files; running tests and git read commands is allowed.

QUALITY BAR: cite file paths (and line numbers where possible) for every finding. Report what IS in the code/docs, not what you assume. Be skeptical and concrete. Your final structured output is consumed programmatically by an orchestrator ? return raw data, not prose for a human.

ROLE: adversarial verifier. An auditor ("testing") claimed the finding below. Try to REFUTE it against the actual files. Default to isReal=false if the evidence does not hold up, the behavior is documented/deliberate (e.g. listed in docs/CODE_MAP.md gotchas or DEFERRED_HARDENING_PLAN.md as a known deferral ? unless the auditor adds genuinely NEW consequence), or the severity is materially overstated.

FINDING: {"title":"No CI exists at all ? nothing runs the suite automatically","severity":"high","area":"test infrastructure / CI","file":"C:/Users/avidu/Projects/badminton-highlight-indexer","evidence":"Glob for .github/** returns nothing; `ls -a` shows no .github/, .gitlab-ci.yml, or any CI config at the repo root. run_all_tests.py's docstring (L4-5, L20) describes itself as 'CI / pre-PR friendly' but no automation invokes it. The compiler SyntaxError merged via commit 7fbb0 and survived at least 3 subsequent commits/PRs (#59-#61 era) undetected.","why_it_matters":"Even a perfect suite is useless if running it is optional; the shipped import-breaking regression is direct evidence. A minimal GitHub Actions job running `python run\_all\_tests.py` + `python -m compileall backend` would have blocked it."}

Steps: open the cited file(s) and any counter-evidence files; verify quotes/line claims; judge severity honestly. Cheap greps allowed; do NOT run the pipeline. Return isReal, confidence, and a 1-3 sentence verdict (with corrected detail if partially right).

1      #!/usr/bin/env python
2      """Run the FULL test suite for the badminton-highlight-indexer.
3
4      A single, discoverable entry point so you (or a reviewer / CI) can verify the
5      whole suite before opening a PR:
6
7          python run_all_tests.py          # full suite, quiet
8          python run_all_tests.py -v       # verbose (passthrough to pytest)
9          python run_all_tests.py -k config # filter by keyword (passthrough)
10         python run_all_tests.py --cov=backend --cov-report=term-missing # coverage
11
12     Anything after the script name is passed straight through to pytest.
13
14     Notes
15     -----
16     - The suite is fully mocked (no GPU, no network, no WSL) and runs offline.
17     - The observability **reporting** tests skip cleanly if the optional ``obsreport``
18       package isn't installed (they use ``pytest.importorskip``). To exercise them too:
19         pip install -e ../sports-obsreport --no-build-isolation
20     - Exit code is pytest's own, so this is CI / pre-PR friendly (0 = all green).
21     """

```

12:**Recommended sequence:** #7 Packaging (lowest risk, unblocks clean installs/CI) ?
14:(largest, product-facing).
22: but it isn't present ? reconcile with the owner.)
31: - `[project.optional-dependencies] dev` ? `pytest`, coverage tooling.
39: shadows the build system; update README/`run_all_tests.py`/CI references.
47:- CI must switch to `pip install -e .[dev]`.
82:- MD5-only dedup is insufficient (re-encodes evade it) ? must track match identity.

```

commit 7fbbbeb0874ce2c2f7a9947c303d822ec71996e6b
Author: avidullu <avidullu@users.noreply.github.com>
Date: Sun Jun 7 14:03:29 2026 +0000

```

feat(logging): standardize to logging in hot paths + update docs

- Added logging.basicConfig in main.py (INFO, timestamped); modules use logger.
- Replaced stray print() in hot paths: motion.py (progress, errors -> logger.info/debug), wasb_infer.py (all WSL progress -> logger), stitcher/compiler.py (all [COMPILER] / [SUCCESS] / warnings -> logger with appropriate level), config/loader.py (warning -> logger.warning), main.py internal (some [API]/[CLI] diagnostics -> logger).
- User-facing CLI output (final success, validation summaries, server start) kept as print for direct UX where it makes sense (or changed to logger.info which outputs the same).
- Updated CODE_MAP.md and LOW_REGRET_MOVES_PLAN.md to document the change and mark item 4 done.
- Tests pass (222 passed, 2 skipped as before); coverage maintained at 63% (no regression; previous improvements from reporting tests still in).
- Docs updated as required (no stale references for this item).

This is item 4 from the low-regret list. Incremental and low-conflict for parallel work.

3:Single tracker for work we consciously deferred, so nothing gets lost between sessions. Each item records **what**, **why** it's deferred, and **the trigger to revisit**. Every entry traces to a real decision/PR/doc (no speculative work).

15:- ? **Ultralytics Enterprise pricing** ? get a quote **only if** the torchvision/ByteTrack detector (PR #8) proves insufficient on real footage. Currently **not needed** (swap done). Quote-only pricing. **Revisit:** if detector quality forces reconsidering YOLOv8.

16:- ? **Codec patent thresholds (AVC/HEVC/AAC)** ? confirm exact Via-LA (AVC) / Access Advance (HEVC) royalty rates & free thresholds **with legal counsel** before relying on the "small SaaS is under threshold" reading. Mitigation already chosen: emit royalty-free AV1/Opus output. **Revisit:** before commercial launch.

18:- ? **Real GPU \$/video & latency** ? benchmark the three LLM-step options (offline ActionFormer vs self-hosted Qwen2.5-VL-7B vs Gemini paid-tier) on the target VM before pricing the product. **Revisit:** when choosing the production LLM step.

33:- ? **GS-4 oracle model** ? `AutomatedProvider` interface is stubbed (this work) with a deterministic fake. Wire a **concrete** fast-tier auto-labeler later. **Oracle rule:** it MUST be a different model lineage than production, or the regression test is blind to shared failures. **Revisit:** when a production LLM step is chosen (pick the oracle's lineage to differ).

34:- ? **GS-5 ? regression triggers** ? wire `regress()` into CI (pre-merge gate), on-demand CLI (the "surprise" case), and a scheduled run; include a deliberate re-baseline path. **Revisit:** after GS-4.

37:- ? **Train/eval separation guardrails** ? train & eval videos live in **separate catalogs** today, kept apart by convention only. Add **hard guardrails** (permissions / explicit approval / re-confirmation at ingest & export) so a video can **never** land in both train and eval. **Revisit:** dedicated design session with the user.

42:- ? **Validate recording hypotheses** ? empirically test which capture conditions (resolution, fps, camera angle/height, lighting) actually move precision/recall, then promote the winners into user-facing "how to record" guidance. Only the static-camera rule is currently evidence-backed (ADR-004). **Revisit:** once a controlled corpus + the eval loop can measure per-condition deltas.

52: not guessed here. **Revisit:** when the owner specifies the grouping scheme. (The `backend/eval/audio/`` half of

55:## Commercial Readiness & Low-Regret Moves ? Approved Decisions Checkpoint (2026-06-07)

57:*(source: Commercial Readiness Review + structure/sequencing discussion with Grok as second-in-command)*

59:- ? **Docs-only checkpoint PR** ? This update + the refreshed `docs/LOW_REGRET_MOVES_PLAN.md`` formally record the approved path before any code changes. The initial review docs (PR #37) introduced the findings; this entry locks the execution decisions.

67:- ? **Sequencing (Config first, then atomic refactor)** ? Implement Deliverable 1 (Config) **first**, introducing the `backend/config/`` package immediately. Perform the full directory structure refactor as a **separate high-pri atomic PR** afterwards. This minimizes conflicts, keeps PRs focused, and gives Claude a clean window with no concurrent moves.

69:- ? **Subsequent items** ? See the refreshed `LOW_REGRET_MOVES_PLAN.md`` for the full ordered list (Error contracts, logging, packaging, detector abstraction, etc.). The structure refactor is now explicitly tracked as its own high-pri step right after Config.

81:- ? **obsreport** is a SOFT/commented dep in `requirements.txt`` (works locally via editable install; pipeline no-ops if absent). **Pin** the `git+ssh@v0.1.3`` tag in both repos once SSH/CI access to the private lib repo exists.

10. user (2026-06-10T05:41:47.051Z)

```
67:         -> regression.regress(_with_provider) vs baseline    @backend/eval/regression.py [CI
gate]
90:- `@run_regression.py::main` ? `regress_with_provider` vs baseline. Exit codes semantic:
**0=ok, 1=REGRESSION (CI gate), 2=missing DB**. ? `--update-baseline` runs AFTER compare
(snapshots even a regressing run); `::default_db_path` resolves via
`backend.config.load_config`.
142:[Omitted long matching line]
282:| Guard a regression (CI) | `@run_regression.py::main` (`--video-id`); exit 1=regress,
2=missing DB; snapshot via `--update-baseline` |
313:| `test_eval_regression.py` | `eval.regression` baseline store/compare/gate; also
`@run_regression.py::main` (exit-code CI gate) |
