1. user (2026-06-21T19:32:10.687Z)

You are an adversary trying to REINTRODUCE the original translation bugs (from PR #77) WITHOUT failing any test. Read under C:/Users/avidu/Projects/khelsutra-cov:

```
- web/src/i18n/catalog-invariants.test.ts and web/src/components/SelectionFooter.test.tsx (the guards)  
- locales/en/common.json, locales/kn/common.json, locales/hi/common.json (and skim es/da/id)  
The #77 audit fixed: (a) brand transliteration ???????? / ????????? ? Latin KhelSutra; (b) leaked `min_shot_count` token in footer.floorSomeRest; (c) engine/server/bucket jargon leaking where en avoids it; (d) Hindi over-Sanskritization (app.badge, app.intro, grid.shots*, grid.shotsConfidence, query.support, result.dismiss); (e) Kannada bulk.invert (rotate) + result.dismiss (legalistic).
```

For EACH class, find a concrete mutation that the current guards would NOT catch (a coverage gap in the regression net). E.g. could engine jargon return on a key not checked? Could the Hindi over-Sanskritized terms (??????????/??????????/????????) come back with no guard? Is the brand-Latin check only on 3 ingest keys while other keys could be transliterated undetected (the absence-of-transliteration check should cover that ? verify)? List the genuinely unguarded classes as findings with the exact mutation that would slip through, and a suggested assertion to close it.

Return structured findings.

2. assistant (2026-06-21T19:32:19.169Z)

I'll start by reading the guard tests and the locale files to understand the regression net, then find coverage gaps.

3. user (2026-06-21T19:32:19.959Z)

```
1      // Content regression guards for the localization catalogs ? the rules the adversarial  
translation  
2      // audit (#77) established, pinned so the specific bugs can never silently return. This  
complements  
3      // hygiene.test.ts (which proves key/placeholder PARITY) by asserting catalog CONTENT:  
4      //   1. no internal code-token / <code> leaks in any locale,  
5      //   2. the brand "KhelSutra" is never transliterated into an Indic script,  
6      //   3. engine/server/bucket jargon appears ONLY on keys where the en source uses it,  
7      //   4. the specific flagged mistranslations stay fixed.  
8      // These are pure data assertions over repo-root /locales (D-CATALOG-HOME) ? no render  
context needed.

12. assistant (2026-06-21T19:32:36.108Z)

Let me look at the actual PR #77 diff to see precisely which keys/terms were fixed, so I can find unguarded mutations.

13. user (2026-06-21T19:32:38.723Z)

commit 9f1ec9c1d9ebeebe173fa5d727ec76d5555409a7
Author: Avi <avi.dullu@gmail.com>
Date: Mon Jun 22 00:46:09 2026 +0530

fix(i18n): native-review pass on the kn/hi SPA console catalogs (#77)

Adversarial translation audit of the AI-drafted Kannada/Hindi SPA console strings (B5/B6) surfaced real quality bugs in the non-site namespaces (app/bulk/grid/footer/result/ingest/errors). en (/locales/en) is the source of truth; the site.* marketing namespace (A3) is untouched. Fixes:

Correctness

- Brand stays Latin "KhelSutra" ? drop the Devanagari transliteration "?????????" (hi: ingest.intro/reassure/fileHint) and the Kannada "?????????" (kn: same keys). A product name is never transliterated.
- footer.floorSomeRest (kn+hi): drop the leaked internal `min\_shot\_count` code token (kn even wrapped it in <code>) and the word "engine" ? kn "(?? ????? ??????????)", hi "(? ???? ???? ???? ??)?", matching en's plain "(they're too short)".

Jargon leak ? en deliberately avoids "engine"/"server"/"bucket"; align kn/hi

- footer.floorOne, footer.floorAll: drop "engine"; rephrase passively ("it would be skipped" / "they'd all be skipped"), matching en.
- errors.networkError: "engine" ? the brand ("Can't reach KhelSutra?").
- ingest.intro, ingest.reassure: drop the bucket/engine/server clauses that were absent from en; match en's plainer meaning.
- ingest.hint, errors.invalidUri: en says "the machine running KhelSutra" (not "engine") ? align kn/hi; ingest.hint also "bucket link" ? "cloud-storage link". (ingest.uriAriaLabel keeps "engine host"/"bucket URL" because en itself uses them there.)

====DIFF KN/HI====

commit 9f1ec9c1d9ebeebe173fa5d727ec76d5555409a7
Author: Avi <avi.dullu@gmail.com>
Date: Mon Jun 22 00:46:09 2026 +0530

fix(i18n): native-review pass on the kn/hi SPA console catalogs (#77)

Adversarial translation audit of the AI-drafted Kannada/Hindi SPA console strings (B5/B6) surfaced real quality bugs in the non-site namespaces (app/bulk/grid/footer/result/ingest/errors). en (/locales/en) is the source of truth; the site.* marketing namespace (A3) is untouched. Fixes:

Correctness

- Brand stays Latin "KhelSutra" ? drop the Devanagari transliteration "?????????" (hi: ingest.intro/reassure/fileHint) and the Kannada "?????????" (kn: same keys). A product name is never transliterated.
- footer.floorSomeRest (kn+hi): drop the leaked internal `min\_shot\_count` code token (kn even wrapped it in <code>) and the word "engine" ? kn "(?? ????? ??????????)", hi "(? ???? ???? ???? ??)?", matching en's plain "(they're too short)".

- Jargon leak ? en deliberately avoids "engine"/"server"/"bucket"; align kn/hi
- footer.floorOne, footer.floorAll: drop "engine"; rephrase passively ("it would be skipped" / "they'd all be skipped"), matching en.
- errors.networkError: "engine" ? the brand ("Can't reach KhelSutra?").
- ingest.intro, ingest.reassure: drop the bucket/engine/server clauses that were absent from en; match en's plainer meaning.
- ingest.hint, errors.invalidUri: en says "the machine running KhelSutra" (not "engine") ? align kn/hi; ingest.hint also "bucket link" ? "cloud-storage link". (ingest.uriAriaLabel keeps "engine host"/"bucket URL" because en itself uses them there.)

Hindi fluency (less Sanskritized/stiff for non-tech coaches/parents)

```
- app.badge ("pick your rallies"), app.intro (de-calqued), grid.shots/  
shotsTitle (????????????/???????? ? ???????/??? ?? ?? ??), grid.shots-  
Confidence (?????? ? ????? ?????), query.support, result.dismiss  
(????? ???? ? ??? ?????).
```

Kannada word choice

- bulk.invert: ???????? (rotate) ? ?????? ?????? (invert selection).
- result.dismiss: ???????? (legalistic) ? ?????? (close).

All `<b>`/`<i>`/`<x>` tags and ICU/{min}/{count}/{conf} placeholders preserved (key-parity + placeholder-parity + es 3-form hygiene tests stay green). Re-synched the site mirror (site/public/locales) via copy:locales so the drift guard passes, and updated the errorText kn-networkError test pin.

Catalogs remain tagged: AI-draft + adversarial-review pass; native review still pending.

```

14. assistant (2026-06-21T19:32:44.687Z)

Now I have a complete picture of the original bugs and the guards. Let me analyze each class systematically against the guard logic to find the coverage gaps.

Let me verify a few critical things about the guards' coverage. First, the brand transliteration check: it only checks for `????????` (kn) and `????????` (hi) literal strings. Let me verify whether there's any check that the brand is positively present everywhere en uses it, and whether partial/alternate transliterations would be caught.

15. user (2026-06-21T19:32:47.888Z)

=== en keys containing KhelSutra ===

```

"intro"
"hint"
"reassure"
"fileHint"
"networkError"
"invalidUri"
"lead"

```

```

"intro"
"body"
=== count KhelSutra in en ===
10
=== Look for hygiene test ===
catalog-invariants.test.ts
hygiene.test.ts
i18n.test.tsx
index.ts

```

16. assistant (2026-06-21T19:32:51.927Z)

Let me look at the hygiene test to confirm what parity it covers, and check whether the brand transliteration variants (e.g. Devanagari without the conjunct, or a different ZWNJ form in Kannada) would slip past the exact-string match.

17. user (2026-06-21T19:32:52.459Z)

```

1      // CI guardrails that keep i18n "by design" (FRIENDLY_AND_MULTILINGUAL.md §4):
2      //   1. KEY-PARITY ? every locale catalog has EXACTLY the `en` key set (the
extensibility proof:
3      //       drop a stub locale and this lists every gap). Trivially green while only `en`
exists; it
4      //       starts enforcing the moment a kn/hi catalog lands (B5/B6).
5      //   2. NO-BARE-STRINGS (attribute level, v1) ? user-facing component attributes
(placeholder /
6      //       aria-label / title) must route through t(), never a hardcoded literal. A curated
start per

18. assistant (2026-06-21T19:33:08.828Z)

Now I have a thorough understanding. Let me run the existing tests to confirm the baseline is green, then verify my candidate mutations would actually slip through by checking the precise guard logic.

Let me analyze each class methodically:

****Class (a) brand transliteration**** ? guards: (1) exact-string match on `????????`/`????????`; (2) the 3 ingest keys must `.toContain("KheISutra")`. The positive check is ONLY on `ingest.intro/reassure/fileHint`. But en uses KheISutra on MORE keys: `ingest.hint`, `errors.networkError`, `errors.invalidUri`. None of those are positively checked. And the negative check is an exact-string match ? an **alternate** transliteration spelling would not match.

****Class (b) `min\_shot\_count`/`<code>`**** ? guarded by regex `/min\_shot\_count/` and `/<\/?code>/i` across all locales/all keys. This is robust. But the leak could come back as a **different** token (e.g. `` jargon or English "min shot count" without underscore).

****Class (c) engine/server/bucket jargon**** ? self-maintaining check: a JARGON term flagged only if en's same key doesn't contain the English word. This is strong. BUT the term list is fixed Indic transliterations: `????`/`????`, `????`/`????`, `????`/`????`. A **synonym** or **alternate spelling** would slip.

****Class (d) Hindi over-Sanskritization**** ? guards: only `result.dismiss !== "???? ??"`. The terms `????/????/????` have NO guard at all.

****Class (e) Kannada**** ? guards: `bulk.invert !== "?????"` and `result.dismiss !== "?????"`. These are exact `.not.toBe()` so a leading/trailing space variant slips.

Let me verify the most impactful gaps empirically before finalizing.

19. user (2026-06-21T19:33:24.605Z)

```

hi alt contains guard string? False
'?? ??' contains guard? False
'??-??' contains guard? False
'?????' contains guard? False
kn alt (no ZWNJ) contains guard? False
kn guard codepoints: ['0xc96', '0xcc7', '0xcb2', '0xccd', '0x200c', '0xcb8', '0xcc2', '0xca4',
'0ccd', '0xcb0']
Class (d): no assertion references ?????/????/???? -> free to reintroduce
kn bulk.invert guard is .not.toBe('????') -> '???? ' (trailing space) or wrapped passes

```

20. assistant (2026-06-21T19:33:28.938Z)

My empirical checks confirm the gaps. Let me verify the most important claims by actually running the guard tests against a representative mutation to be certain they pass. Let me grep the source components to confirm which keys actually render (so the SelectionFooter render-guard scope is accurate), and check the kn `????` (machine) usage that's already legitimately present.

21. user (2026-06-21T19:33:33.571Z)

```

=== does any guard reference grid.shots / query.support / app.intro / app.badge content? ===
NONE -> class (d) keys unguarded for content

```

```
=== which Hindi keys would over-Sanskritized terms land on (current clean values) ===
37:   "support": "<b>???? ?? ?????</b> ?? ??? ? ???? ???? ???? ???? ???? ????-????
<x>????????</x> ?? (?? ? ? ? ?)?"
46:   "shots": "~{count} ????? · ??????",
47:   "shotsTitle": "?? ???? ??????? ? (?? ? ? ? ?) ? ? ? ? ? ? {conf}? ? ? ? ?
???? ? ? ???? ? ? ?????? ??????",
48:   "shotsConfidence": " ? ???? ?????: {conf}"
```

22. assistant (2026-06-21T19:33:38.346Z)

All gaps confirmed. Let me do a final verification by actually mutating a locale and running the guard suite to prove a representative mutation slips through, then revert.

23. user (2026-06-21T19:33:48.819Z)

mutated

=== run the two guard tests ===

```
RUN v3.2.6 C:/Users/avidu/Projects/khelsutra-cov/web
? src/i18n/catalog-invariants.test.ts (15 tests)
15ms

=== restore ===

26. assistant (2026-06-21T19:34:06.992Z)

Both the hygiene suite (37 tests including key-parity, placeholder-parity, es plural) and SelectionFooter render guard stay fully green with the regressions in place. The locale is restored (clean `git status`). My adversarial mutations are confirmed undetectable.

I have everything I need to report the findings.

27. user (2026-06-21T19:35:00.454Z)

Structured output provided successfully

28. assistant (2026-06-21T19:35:17.851Z)

I've completed the adversarial coverage-gap analysis. I read both guard files, all three Indic catalogs plus the en source and es, and the original #77 diff to pin the exact terms each class fixed. I then empirically proved the two highest-impact gaps by reverting the real bugs into the live catalog and running the full suite (15 catalog-invariants + 37 hygiene/footer tests) ? everything stayed green ? before restoring the file to a clean `git status`.

Key findings (all unguarded mutations that slip the regression net):

- **Class (d) Hindi over-Sanskritization ? blocker, zero guard.** `?????????? / ????????? / ?????? can be reintroduced verbatim on `grid.shots`, `query.support`, `app.badge`, `app.intro`. The only word-choice pin in that class is `hi result.dismiss`. Empirically verified the suite passes with the exact #77 bug back.`
- **Class (a) brand, two separate gaps ? major.** The positive `.toContain("KhelSutra")` covers only 3 ingest keys, leaving `ingest.hint`, `errors.networkError`, `errors.invalidUri` free to drop the brand; and the no-transliteration check is an exact-substring denylist of one spelling per locale, so spaced/hyphenated/alternate-conjunct/no-ZWNJ transliterations all evade it. Verified by putting a transliterated, brand-dropped string in `ingest.hint`.`
- **Class (c) jargon ? major.** Self-maintaining but term-bound to 3 fixed transliterations; a synonym (?????, ????, ?????????) or alternate spelling re-leaks the concept undetected.
- **Class (e)/(d) word-choice pins ? minor.** `.not.toBe()` is full-string equality, so a padded/wrapped variant (????????` etc.) ships the mistranslation while passing; should be .toContain(...)`.`
- **Class (b) token leak ? minor residual.** Robustly guarded for the literal token/`<code>`, but a non-underscore phrasing or a different inline tag (`<kbd>`/`<samp>`/`<x>`) is uncovered.

Relevant files (absolute):

- `C:/Users/avidu/Projects/khelsutra-cov/web/src/i18n/catalog-invariants.test.ts``
- `C:/Users/avidu/Projects/khelsutra-cov/web/src/components/SelectionFooter.test.tsx``
- `C:/Users/avidu/Projects/khelsutra-cov/web/src/i18n/hygiene.test.ts``
- `C:/Users/avidu/Projects/khelsutra-cov/locales/{en,hi,kn,es}/common.json``

Suggested assertions to close each gap are in the structured findings (derive the brand-presence and jargon rules from `en` rather than hardcoding key/term lists; add a banned-term scan for the class-(d) Sanskrit terms; switch word-choice pins to `.toContain`).`
