Transcript

1. user (2026-07-02T02:42:14.490Z)

hello. Please use the khelsutra-guru as the project root and do a indepth analysis of the repos inside the root directory and identify any critical fixtures and tech debt worth cleaning up. Please make a targeted plan and execute it after my approval

2. assistant (2026-07-02T02:42:33.384Z)

I'll start by getting oriented: check the khelsutra-guru project memory for a session handoff, and list what's inside the root directory.

3. user (2026-07-02T02:42:35.958Z)

```
1      # Memory Index
2
3      ## ? Start here
4      - [Working root = khelsutra-guru (multi-repo)](working-root-khelsutra-guru.md) ? **owner
directive 2026-06-29:** OPEN `Projects\khelsutra-guru` as the UI project (5 git repos), switch
sub-repo per task. Memory store MIGRATED to the khelsutra-guru key (Option B); badminton-
highlight-indexer is no longer the startup anchor. Detail + migration-verification note
[[working-root-khelsutra-guru]].
5      - [? rally finding-B promotion (P2b) + launch signoff](next-session-rally-finding-b-
promotion.md) ? **freshest, 2026-06-29.** Fixes A/B/C MERGED (`0c9c693`); B behind
`inactivity_temporal_density` (default-OFF no-op). ? NEXT = run golden A/B at SERVED, promote-
or-reject via `promote_if_served_safe`, then full suite + GO/NO-GO launch report (recommend,
don't decide). Runbook `docs/RALLY_DETECTION_FIXES_PLAN.md` $8 Q2; detail [[next-session-rally-
finding-b-promotion]].
6      - [? multi-shuttle / prominent-court detection](next-session-multishuttle-rally.md) ?
design journey (2026-06-19/20). Multi-track + court-aware selector measured vs GOLDEN: does NOT
beat single-track baseline ? NO PR; it's a targeted lever, not an F1 win. ? NEXT = the verdict-
flipping experiment: a separable-adjacent-court golden clip (`Boxhill_Doubles`, owner GPU) w/
court-membership-only selection. Detail [[next-session-multishuttle-rally]]. *(Design/scratch.)*
7      - [? batteries-included downloadable app](next-session-packaging-app.md) ? packaging
track. ? P3+P2b+P2c DONE 2026-06-22 (engine #310/#312, khelsutra #88) ? v1 LIGHT FEATURE-
COMPLETE; only OWNER steps remain (clean-box acceptance + ffmpeg UX). North-star (native-
```

WASB/training/annotation) future + gated. Doc `docs/PACKAGING\_PLAN.md` §7; detail [[packaging-app-plan]].

8 - [? khelsutra UX/l10n/runnable-tool](next-session-ux-localization.md) ? refreshed 2026-06-22. Tool BUILT + localized (6 langs); ALPHA LIVE + real-use-proven at `https://api.khelsutra.guru` (single-origin). ? NEXT = 13-issue triage backlog: async `/api/compile` (#329, kills the 524), M7 Cloud-Run L4 GPU, NSFW litmus (#332) + UX/obs polish; launch gate needs native-speaker review. Full ramp-up in [[current-state]] SESSION WRAP.
(Engine/serving track = own [session-handoff](session-handoff.md)).

9 - [? golden regression fixtures (optional)](next-session-golden-fixtures.md) ? track COMPLETE 2026-06-22 (8 PRs); clean clone runs rally-seg regression (synthetic + 6 real fixtures `fx\_r0X`), cross-OS + leak-guarded. ? NEXT (optional): (1) M4 quality-floor on real fixtures; (2) deferred video-name rename (before open-sourcing); (3) 01 protobuf / 02 key-gated. Detail [[next-session-golden-fixtures]].

10 - [? Studio media lifecycle (ingest?store?annotate?train)](project-studio-media-lifecycle.md) ? **STORAGE HALF COMPLETE 2026-07-01.** Full "add a video ? store in chosen medium (S3/GCS/Drive/local) ? free-space checked ? appears in my videos" is END-TO-END: P2 engine free-space (#407), P3 capabilities-storage (#408), P4 `POST /api/assets` (#409), P5 SPA medium picker (khelsutra #137) ? all MERGED. Annotate-in-UI (P6-P9) already shipped. 5 screencasts (04 = store-in-my-medium). **? ONLY owner-gated remains: P10/P11 (corpus promotion + train/reeval, DEFERRED D13) + `L` beta follow-ups ? do NOT build without owner lifting the gate.** Doc `khelsutra/docs/STUDIO\_MEDIA\_LIFECYCLE.md`; detail [[project-studio-media-lifecycle]].

11 - [Current state](current-state.md) ? **live micro-checkpoint** (updated every checkpoint): open PRs, what just landed, next steps, open decisions. **Read this first.** Now LIVE-only (handoff + today's checkpoints); kept read-first-short.

12 - [Current-state archive](current-state-archive.md) ? chronological checkpoint history (2026-06-06 ? 06-18, 96 blocks) split out of current-state 2026-06-19. Deep history only; NOT read each session.

13 - [Session handoff](session-handoff.md) ? current state · next steps · open decisions · ramp-up kit. AUTO-refreshed at meaningful checkpoints (PR merged, key decision, phase shift, session wrap) ? see working-agreement-checkpoints staleness tripwire.

14 - [Code map artifact](code-map-artifact.md) ? for CODE/architecture ramp-up, read `docs/CODE\_MAP.md` FIRST (dense anchor-rich map; replaces a file crawl). How to regenerate it.

15 - [File-placement conventions](file-placement-conventions.md) ? **where new files go** (scripts/ vs backend/eval/ vs tools/ vs scratch/ vs training/ vs artifacts/ ?); **read before committing a new file.** Authoritative table = `docs/CODE\_MAP.md` §0 (PR #138); scratch/ gitignored (#136).

16

17 - [Working agreement: attribution](working-agreement-attribution.md) ? never assert fabricated facts; NEVER invent a provenance (a discussion/review/source that didn't happen). The silver-bullet rule.

18 - [Working agreement: checkpoints](working-agreement-checkpoints.md) ? user prefers frequent small PRs + a Claude-consumable current-state file updated at every micro-checkpoint.

19 - [Feedback: tail long-job logs](feedback-tail-long-job-logs.md) ? proactively tail progress/summaries from long-running background jobs while they run, not just the final result.

20 - [Working agreement: merging](working-agreement-merging.md) ? owner authorized Claude to MERGE its own good-engineering-fix PRs on verified-green CI (2026-06-12); product/strategy/licensing stay owner-gated.

21 - [Working agreement: tracked project docs](working-agreement-tracked-project-docs.md) ? substantial design/project work gets a **tracked project doc** (template + §7 progress tracker + definition-of-done); freeze ? track across sessions ? mark done ? archive. Owner-loved framing (2026-06-16); codified in `CLAUDE.md` + `docs/PROJECT\_DOC\_TEMPLATE.md` (PR #186).

22 - [Doc-status register + archival due-diligence](doc-status-register.md) ? owner directive (2026-06-21): `docs/DOC\_STATUS.md` is the **living doc-lifecycle register** ; **archive foundational docs only AFTER honestly updating them** (verify?flip status+completion note?update refs?keep lineage?move). Worked example = DECOUPLED #270. Codified in `CLAUDE.md` archive policy.

23 - [Lesson: verify engine-surface before scoping](lesson-verify-engine-surface-before-scoping.md) ? **anti-spiral (2026-06-21):** before scoping a doc's `[gap]`/`net-new`/"X-only" engine claim as work, RE-VERIFY against engine code at a cited `file:line` (engine drifts between sessions). `[verified]` without a `file:line` = a hypothesis. Born from B-P1; docs fixed ? khelsutra #55.

24 - [Launch Report convention](launch-report-convention.md) ? owner directive (2026-06-17): EVERY default-config/quality-bit flip ships with a documented **Launch Report** (total-quality-impact table on both rulers + over-seg guard + honest caveats), recorded for posterity BEFORE the flip merges. Born from the Gate-A #146 flip that regressed (#151). Pairs

with [[eval-dual-set-regression]].

25 - [Feedback: launch quality bar](feedback-launch-quality-bar.md) ? approaching launch (2026-06-20): tightly ****isolated one-item PRs + rising coverage****, and ****serious observability**** (full log analysis across every NEW code path; correlation/job IDs; loud failures, no silent drops). Make Observability a first-class doc section + DoD item.

26 - [Review: trust CI, don't re-run it](review-trust-ci-over-rerun.md) ? owner feedback (2026-06-25): ****don't re-run the exact CI checks locally during review**** (CI already ran them green on that commit ? wasted time); rely on green CI + a documented PR ****`## Verification`**** section, and spend local effort only on what CI can't cover (merge-safety, env-noise vs real defect, findings, machine-side paths). Refines the global pre-LGTM gate. Proposed the Verification convention on #378 (+offered a PR template).

27 - [Review: sign-off policy](review-signoff-policy.md) ? owner's settled rule (2026-06-25): ****sign off (written LGTM) on pure-refactoring / zero-behavior PRs once CI is green**** (confirm semantics-free via AST-identity, not re-running CI); ****HOLD logic/behavior changes for the owner**** unless authorized per-PR. Red CI blocks sign-off regardless. gh=avidullu ? written LGTM, never a formal Approve.

28 - [Gotcha: shared-checkout branch collisions](gotcha-shared-checkout-branch-collisions.md) ? spawned tasks + sibling sessions SHARE this checkout; ****branch from `origin/master` explicitly, re-verify HEAD before commit, stage explicit paths, serialize repo writes.**** The #116/#117 collision (owner upset). Global form in ~/.claude/CLAUDE.md.

29 - [Lesson: branch rename closes its open PR](lesson-branch-rename-closes-open-pr.md) ? renaming the head branch of an OPEN PR ****closes**** it (does NOT retarget); cost PR #393 ? roll-forward #394 (2026-06-29). Don't rename a branch with an open PR; rename before opening, or plan to re-create.

30 - [Gotcha: long GPU/WSL runs](gotcha-long-runs-gpu-wsl.md) ? running the WASB pipeline E2E on a big 4K video: Modern Standby kills it (keep-awake), cv2 extraction is the bottleneck (ffmpeg pre-extract), proxy-index/4K-stitch recipe + how to observe each phase.

31 - [GCP Ops Agent: always enable](gcp-ops-agent-enable.md) ? owner directive (missed TWICE): every rally GPU VM needs the Ops Agent for Observability/GPU graphs ? ****3 pieces**** (logging+monitoring APIs ON + SA metric/log-writer roles + agent install via startup-script). BAKE into `deploy/gcp` provisioning so it's automatic.

32 - [GCP VM: always DELETE, never just stop](gcp-vm-always-delete.md) ? owner cost rule (2026-06-20): a STOPPED VM still bills its disk (~\$34/mo for 200GB pd-ssd); ****DELETE**** ? \$0 (boot disk autoDelete=true). `teardown.sh` now defaults to `delete`; audit `gcloud compute disks list` for orphans. DO droplet `claude-do-rally-test` (~\$24/mo) is a shared testbed (owner-gated).

33 - [Compute = GCP only; DO dropped](compute-stack-gcp-only.md) ? ****standing decision (ADR-013, 2026-06-20):**** GCP is the SOLE compute stack (training + serving); ****DigitalOcean dropped for compute**** (GPU not enabled/credit-funded; Paperspace subscription-gated). Provision via `deploy/gcp/` only; don't relitigate DO/Paperspace without a new ADR; \$200 DO credits ? non-compute only.

34 - [Storage bucket config requirements](storage-bucket-config-requirements.md) ? owner directives (2026-07-01): bucket names via ONE config (no hardcoded literals) · split by 3 data families (user videos vs golden/dev vs scratch ? a compliance boundary, D1) · per-deployment/per-region buckets (e.g. user videos per continent). Audit: runtime single-source ?; deploy/gcp scripts had duplicated corpus/nightly literals under TWO env-var names ? ****FIXED (engine #410): `deploy/gcp/buckets.env` sourced by all 7 scripts, corpus unified under `RALLY\_CORPUS\_BUCKET` (legacy names = back-compat aliases), `.gitignore` `!` negation so the no-secret env file is tracked.**** Per-region = env override, no code change. Detail [[storage-bucket-config-requirements]].

35 - [GCS = corpus source of truth](gcs-data-source-of-truth.md) ? ****owner goal (2026-06-22):**** run ALL train+infer from cloud, ALL data in `gs://khehsutra-rally-corpus`. ****Pull from the bucket, not C:/F:/Drive.**** Map = `docs/DATA\_IN\_GCS.md`; cloud engine built (`backend.worker infer|train` by URI). Gap = ~25 MB corpus metadata local-only + trivially migratable. Pairs [[compute-stack-gcp-only]].

36 - [Cache-hygiene policy](cache-hygiene-policy.md) ? retention table (purge frames/staged vs keep CSVs/DB/reels) + the shipped tooling: self-cleaning runners (keep_frames default false), tools/cleanup_caches.py (dry-run-first), disk guard, SessionStart nudge hook. The `for e in \*` WSL footgun.

37 - [Tool: trim_video.py](tool-trim-video.md) ? reusable `scratch/trim\_video.py` for keyframe-aware LOSSLESS video trims (drop first/last N sec), `--exact` re-encode with NVENC?libx264 fallback. Reach for it instead of hand-rolling ffmpeg trims.

38 - [Decision-rigor norm](decision-rigor-norm.md) ? ****NUMBERS INFORM, FOUNDATIONS DECIDE**** (owner directive 2026-06-14, set by the Gate-A flip). Every signal/architecture change gets ablation-layer rigor (per-signal marginal ?F1 + honest CI/sign-test) AND a foundational lens

(extensible/orthogonal/reversible), never numbers alone. Ties [[weak-signals-retained]] + [[paper-coauthor-aim]].

39

40 ## Project: rally segmentation pipeline

41 - [Candidate segments & fine-tuning](candidate-segments-finetuning.md) ? why raw detector candidates are persisted (detector-agnostic table); golden-eval-set goal

42 - [TrackNetV4/WASB via WSL2](tracknet-wasb-wsl2-decision.md) ? self-hosted shuttle trajectory models (not LLM APIs); WASB/TrackNetV3 = MIT, commercial-clear

43 - [Collector?indexer bridge](collector-indexer-bridge.md) ? 4-phase plan to train/eval a generic temporal rally segmenter; Phases 1?2 done, 3 in progress, 4 next

44 - [Golden-set vendoring](golden-set-vendoring.md) ? generate golden rally labels via 3rd-party vendors (Bangalore-local) + extensible regression flow; Roora selected for a 3-sport pilot, guideline + collector ingestion built, GS-1/2/4 landed, GS-3 + gold key pending

45 - [Roora guidelines Drive doc](roora-guidelines-drive-doc.md) ? the CANONICAL vendor-facing Brief+Guide Google Doc (supersedes v3/v5/v6/v7 Drive copies; v7 anomaly RESOLVED 2026-06-12); TODO markers still to fill before sending

46 - [Audio (E1) findings](audio-e1-findings.md) ? quantitative gains/losses of the classical-onset audio cue (recall 100% but discrimination ~2.2x, band-pass null) + reusable lessons for adding the NEXT signal. Audio NOT adopted for fusion; detector kept (PR #35).

47 - [Weak signals retained](weak-signals-retained.md) ? owner directive: non-significant cues (person/audio/court-bounds/future **shuttle-drop**) stay **default-OFF + retained** as scorer feature columns (no special-casing) for a growing (Roora) corpus ? never deleted on a small-n null. Measured: person ?F1 ?0.021, +audio +0.079 (both CIs span 0 at n=6).

48 - [Eval boundary tolerance](eval-boundary-tolerance.md) ? owner directive (2026-06-16): rally scoring must tolerate the ~1?1.5s **service-window** start-fuzziness ($\pm 2s$, not strict tIoU 0.5 which only allows $\pm 1.9s$ on a 5.7s rally). KEY measured finding (mp2+GX010128, n=2): local's |?start|?Gemini but |?end| 2?3x worse ? **the gap is rally-END detection**, not generic boundary precision ? next lever (R2 metric ? R4 end-rule). Reusable `scratch/at\_par.py`.

49 - [Golden corpus grew 9?15](golden-corpus-grew-9-to-15.md) ? **2026-06-22:** #316 GCS migration restored the original-6 single-court labels ? local golden eval set now **15 clips** (was 9). Trips 9-clip-pinned litmus (re-grounded PR #322); check corpus size before suspecting a code regression. Pairs [[eval-dual-set-regression]] [[gcs-data-source-of-truth]].

50 - [Eval dual-set regression](eval-dual-set-regression.md) ? owner directive (2026-06-16): keep a **RAW eval set** + a **GROWING GOLDEN-finalized set** (promote raw?golden when at-par) + a separate **golden TRAINING set** ; every quality launch must NOT regress on EITHER eval set. The ablation layer A/Bs these; wire dual-set aggregate into `run\_regression.py` when R2 lands.

51 - [Decision-snapshot regression](decision-snapshot-regression.md) ? **tracked project, decisions LOCKED, #383 merged (2026-06-25).** **Deterministic **quality-neutral proof** : freeze+compare DECISION output (segments+stitch plan) off a cached trajectory in CI ? lets a genuine refactor be auto-called quality-neutral (NOT a reel-MD5). ? next = \$7 P1. Doc `docs/DECISION\_SNAPSHOT\_REGRESSION.md`.

52

53 ## Packaging / distribution

54 - [? Next session: packaging app](next-session-packaging-app.md) ? **the icebreaker/handoff to resume this track** (read first; also under ? Start here).

55 - [Batteries-included app plan](packaging-app-plan.md) ? downloadable Python app (local web service for inference/training/annotation). **11 PRs merged 2026-06-21/22** ? LIGHT-tier bundle-ready (`pip install`?`indexer --app`?bundled SPA, torch-free). Doc `docs/PACKAGING\_PLAN.md` \$7. **01+02 LOCKED** (cross-platform, LIGHT-first WASB-complete north star); 03+ gated. Pairs [[ui-driven-cloud-serving-gap]]. Don't relitigate locked calls.

56

57 ## Monetization (hosted API)

58 - [Monetization plan](monetization-plan.md) ? hosted video?highlights API on a GPU VM; licensing & per-video cost are first-class; user is Bangalore-based

59 - [Monetization research status](monetization-research-status.md) ? audit done: Ultralytics AGPL swapped out (PR #8); MonoTrack/YOLO-NAS weights avoided; codec=watch; full report in docs/

60 - [Machine-pooling idea](machine-pooling-idea.md) ? owner "food for thought" (2026-06-20): pool GPU machines (queue-on-one-host vs Cloud-Run scale-to-zero) instead of spin-up/kill per task ? born from a single-GPU-slot collision between two sessions (quota=1). Infra-track design item.

61 - [UI-driven cloud-serving gap](ui-driven-cloud-serving-gap.md) ? **owner directive (2026-06-21): cloud highlight flow must be UI-driven + ALPHA-SHAREABLE, not SSH/CLI; surface compute options (local vs cloud) in UI at start.** ? The compute-picker + real Cloud Run L4 GPU

```

e2e validation LANDED 2026-06-22 ? see [[cloudrun-gpu-serving-gotchas]].
62     - [Cloud Run GPU serving gotchas](cloudrun-gpu-serving-gotchas.md) ? **reusable knobs to
run the WASB worker on Cloud Run L4 GPU** (region?Mumbai · `--no-gpu-zonal-redundancy` · GCS
volume-mount weights · PowerShell-not-Bash `/mnt` flags · `skip_ai_handoff=true` no-key ·
digest-pin?`jobs update` · `.[storage-gcs]` in image · control plane needs google-cloud-
run+ADC). Verified 2026-06-22 (`artifacts/cloudrun_e2e_validation/`).
63     - [Khelsutra site droplet parity](khelsutra-site-droplet-parity.md) ? **RETIRED
2026-06-25.** DO droplet `claude-do-rally-test` (dual-purpose site mirror + alpha engine) kept
drifting from CF ? owner retired it: data archived to GCS+local, droplet deleted ($0), monitor
removed (khelsutra #117). Follow-ups: `api.` CNAME/CF-Access cleanup. Pairs [[compute-stack-gcp-
only]] [[ui-driven-cloud-serving-gap]].
64
65     ## Forward-looking
66     - [Sibling internship repo](sibling-internship-repo.md) ? khelacharya shot-intelligence
layer builds ON TOP of our rally segmentation; kept off master at branch level (NOT a separate
GitHub repo ? corrected 2026-06-06)
67     - [Paper co-author aim](paper-coauthor-aim.md) ? **standing side-aim**: co-author a
paper on "local, cheap & efficient rally detection via multiple clever ideas". Keep
`docs/QUALITY_ITERATIONS.md` as the ablation-ready empirical backbone; honest measured results
ONLY.
68
69     ## Project: muneem-ai (SEPARATE root from khelsutra-guru)
70     - [muneem-ai workspace](muneem-ai-workspace.md) ? `C:\Users\avidu\Projects\muneem-ai` =
3 repos (**muneem** Python local-first finance bookkeeper + **node-text-detection**
Node/Tesseract OCR + **Email-Mining** prior art). Per-session focus switch (2026-07-01);
persistent root stays khelsutra-guru. muneem CI = ruff(len 100)/mypy/pytest-cov80, vendored
`ruff-bin/ruff.exe`. Detail [[muneem-ai-workspace]].
71     - [muneem grocery-replenishment SENSOR](muneem-grocery-replenishment.md) ? **GR.0?GR.5
BUILT + MERGED to main 2026-07-01 (9 PRs #100?108).** Loop = `grocery ingest`/`ingest-receipt
--store` ? `pantry due`/`pantry compare`. A depletion **sensor** (owner: "as a sensor, not a
delight"): per-item history (`purchase_items`, migration v8) ? slow-staple run-out + confidence
+ cheapest-store; 2nd source via OCR/text receipt. Built on 206 real BigBasket line-items from
**`avidullu.svp@`** Gmail. GR.5 = deterministic structural canonicalization; **the LEARNED
Tier-1 is the ONLY unbuilt piece ? parked under $8.5 (owner-gated).** Detail [[muneem-grocery-
replenishment]].
72

8     ---
9
10    # Session handoff ? badminton-highlight-indexer (rename PENDING) + siblings: sports-
data-collector, rally-annotator, sports-obsreport
11
12    **Last updated:** 2026-06-25 (**review-automation + audit-completion session** ? see ?
You are here (2026-06-25) below. Maintenance/PR-review phase, NOT serving/alpha: 0 open PRs, all
CI green, no GCP VMs, PR-review watch loop OFF. The serving/alpha track below is UNCHANGED +
owner-gated.) Prior: 2026-06-22 (**M11+M12 serving-code session** ? owner: "build 3 then 4 then
we pair on the alpha (2)". **Both Claude-doable engine items DONE + merged:** **M11** data-
flywheel skeleton [#336](https://github.com/Khelsutra/badminton-highlight-indexer/pull/336)
(`334ad0f` ? default-OFF + consent FAKED-DENY, inert; reuses workspace/eval/promotion; NO
migration) + **M12** `gdrive-api://` OAuth StorageBackend
[#338](https://github.com/Khelsutra/badminton-highlight-indexer/pull/338) (`819e395` ?
idempotent put, lazy Google imports, injected-fake tests; live per-user OAuth owner-gated). Both
adversarially reviewed, full-suite+cross-OS green, merged on green, in an isolated worktree. **?
NEXT = pair with owner on the ALPHA GO-LIVE (option 2)** ? owner brings CF dashboard + box +

```

rotated Gemini key; the counsel ToS/DPA inputs (the 7-pt checklist) gate M11 *live* + M9-consent. ? schema ladder drifted under me this session: v7=`locale`, v8=compute-picker ? the future M9-consent migration is **v9** (check `PRAGMA user\_version` before authoring). Prior same-day: **maintenance / green-PR merge-sweep session** ? owner asked to merge the green PRs + finish loose ends. 6 PRs now on master: worker dated-label fix **319**, nightly Cloud-Run scheduler **320**, DATA_IN_GCS map **316**, doc **321**, gate-A litmus re-ground **322**, golden-fixtures backlog **323**. engine `origin/master` = `9b37269`, suite **14287**, **0 open engine PRs** ; docs-archive had no terminal candidate (owner-gated). Full per-PR detail = [[current-state]] top. ? ~10 concurrent worktrees/sessions ? owner is trimming concurrency before new work. The serving/alpha plan below is UNCHANGED. Prior **2026-06-21 ALPHA-SHAREABLE session** ? Claude's half of "make it UI-driven + alpha-shareable" is **DONE**: 3 PRs merged ? engine **294** exposure-safety boot posture + khelsutra **64** SPA `VITE\_API\_BASE` + **65** deploy kit. **KEY CORRECTION**: B-P2 (SPA ingest screen) was ALREADY shipped (#56) ? alpha-shareable was a DEPLOY/AUTH task, not an SPA build. Owner chose the **SPLIT** topology (SPA on CF Pages + `api.` cloudflared tunnel + CF Access). Remaining = OWNER stand-up via `khelsutra/deploy/DEPLOY\_ALPHA.md`; then engine M11/M12. Full record [[ui-driven-cloud-serving-gap]]. Prior: HUGE serving session ? M1?M9-auth shipped (#279?#291) + real M7 L4 run. **Repo is under the `Khelsutra` GitHub org**.

13

14 > **Read order:** this file ? [[current-state]] top (dense per-checkpoint detail) ? `docs/NEXT\_STEPS.md` (the prioritized cross-track plan, refreshed 2026-06-21) ? `docs/DOC\_STATUS.md` (doc lifecycle/hygiene).

15

16 ## ? You are here (2026-06-25)

17 **Review-automation + audit-completion session.** engine `origin/master` = **0b4f492** . all CI green . **0 open PRs** . no GCP VMs . **PR-review watch loop OFF** (cancelled). NOT serving/alpha (that track is the "Earlier" block below, unchanged + owner-gated).

18 - **Repo tidy:** synced master, pruned ~92 stale local branches + 7 stale worktrees; **fixed a corrupted (UTF-16-tail) `.gitignore` ? `artifacts/` ignored + `KHELSUTRA\_PRODUCT\_OVERVIEW.md` tracked (**377**); owner un-hid the hidden `C:\Users\avidu\Projects` folder.

19 - **khelsutra site-droplet RETIRED** ([[khelsutra-site-droplet-parity]]): the dual-purpose `claude-do-rally-test`/`168.144.126.176` (marketing-site mirror + alpha engine) kept drifting from CF ? **deleted (\$0; data archived to `gs://khelsutra-rally-corpus/archive/droplet-?-20260625/` + local), parity monitor removed (khelsutra #117), Node-20 actions bumped (#118).** ? This means the prior "LIVE alpha on the droplet" in the Earlier block is **GONE** ? alpha is paused pending the Cloud-Run move; `api.khelsutra.guru` CNAME/CF-Access need cleanup.

20 - **CODE_CLEANUP_AUDIT advanced ? 3 HIGH items + infra all merged:** B2/P17 surface-Gemini-failures (**378**) . 01/P11 Gemini remote-file GC (**380**) . B1/P9 remove-fabricated-motion-data (**385**); + ruff-format split (#379), audit-doc reconcile/accuracy (#375/#376), Tier-1 nightly `nightly.yml` (#381), per-job CI timeouts (#382). **Remaining audit items: D1 (split `main.py` ~1450 lines), D13 (ByteTrack?trackers`), Phase-3 (B3/B4/B6/B7/B8/D5/D6/D8-D10/O3/O4).**

21 - **NEW tracked project: Decision-Snapshot Regression** ([[decision-snapshot-regression]] . `docs/DECISION\_SNAPSHOT\_REGRESSION.md` . **383 merged**) ? a deterministic **quality-neutral proof** (freeze+compare the DECISION output = segments + stitch plan off a cached trajectory; **NOT** a reel-MD5). **Decisions D1?D11 LOCKED** (D10 = double-run determinism guard, deterministic segmenters only; D11 = advisory?gating staging). **? NEXT = \$7 P1** (canonical snapshot schema/serializer) ? P2 (`build\_stitch\_plan()` extract) ? P3 (extend `test\_golden\_fixtures` + guard). B1/#385 makes `motion` snapshot-eligible.

22 - **Review-automation patterns established** ([[review-signoff-policy]] + [[review-trust-ci-over-rerun]]): spin off **multi-agent review Workflows** (Ultracode; agents READ-ONLY) ? adversarially verify ? post synthesized findings; **sign-off policy** = LGTM pure-refactors on green (AST-identity vs master), HOLD logic/CI-infra for owner; **written LGTM only** (gh=`avidullu` = owner's own account ? GitHub blocks self-Approve); **trust green CI + a PR `## Verification` section, don't re-run identical CI checks** ? reserve local effort for what CI can't cover (AST-identity, merge-safety, env-noise-vs-real-defect, findings-actually-fixed).

23

24 **? Likely next pick-up:** start the Decision-Snapshot project at **\$7 P1**, or continue the audit (D1 split-main.py / D13 ByteTrack). Serving/alpha remains owner-gated (now needs the Cloud-Run move since the droplet is gone).

25

26 ---

27

28 ### Earlier ? serving/alpha track (2026-06-22/23, UNCHANGED + owner-gated; note the
droplet alpha is now retired per above)

29

30 ## ? You are here (2026-06-22)

31 **(2026-06-23 #342)** engine `origin/master` = **`688d28f`** ? merged a small compute-
path fix: `GoogleCloudRunJobClient.run\_job` now guards an unset/empty `GOOGLE\_CLOUD\_PROJECT`
(was passing `Optional[str]` into `JobsClient.job\_path(project: str,?)` ? latent mypy `arg-type`
seen only with `google-cloud-run` installed + a bogus `projects/None/?` path at runtime). Guard
runs before the lazy SDK import (CI-testable, SDK-absent) and raises a clear `RuntimeError`;
+`test\_real\_client\_rejects\_missing\_project`. Full suite 1488?, cov 85.86%, all 10 CI green,
merged on green per [[working-agreement-merging]]. Follow-up doc
[#345](https://github.com/Khelsutra/badminton-highlight-indexer/pull/345) (`9329473`) added the
operator note to `deploy/cloudrun/README.md` Gotchas. (Originated as a spawned chip; the live
cloud-toggle work above is the sibling track ? see [[current-state]] top.)

32

33 **(2026-06-22 M11+M12)** engine `origin/master` = **`819e395`** (past #336 M11 + #338
M12; also sibling #333 M6?/api/process, #334 Cloud-Run env, #6d3d054 SPA compute-picker) .
khelsutra `origin/master` = `ba38f15` (past #96 Privacy Policy, #100). **The two Claude-doable
serving-code items are DONE** (M11 flywheel skeleton #336 + M12 gdrive-api #338 ? both default-
OFF/inert, adversarially reviewed, merged on green). **Claude's serving + alpha-shareable code
is now complete.** **?? THE ONLY REMAINING ALPHA STEP IS OWNER-DRIVEN: pair on the go-live**
(cloudflared tunnel + CF Pages + CF Access + Gemini-key rotation per
`khelsutra/deploy/DEPLOY\_ALPHA.md`) ? Claude guides, owner drives the CF dashboard/box. M11
going *live* + M9-consent need the counsel ToS/DPA inputs (the 7-pt checklist in [[ui-driven-
cloud-serving-gap]] / this session). Other future engine code: M7 real cloud-serving e2e (owner
GCP spend), per-video workspace P1?P6, the rally-quality track (corpus-gated).

34

35 **(2026-06-22 sweep)** engine `origin/master` = **`9b37269`** (+ today's
#316/#319/#320/#321/#322/#323) . engine **~1428** tests green (combined-master verified w/
corpus manifest) . **0 open engine PRs** . no GCP VMs. This was a cross-track maintenance sweep
(worker fix, nightly scheduler, GCS-data doc, gate-A litmus re-ground, golden-fixtures backlog)
? the serving/alpha forward-plan below is unchanged. ? a sibling's redundant gate-A branch
`fix/served-gate-a-regrounded-15clip` sits in the MAIN checkout; concurrency being trimmed.

36

37 **(2026-06-21 prior)** engine `origin/master` = `0c0e064`+ (past #292/#293/#294) .
khelsutra `origin/master` = `4627830` (past #63/#64/#65) . **no GCP VMs (audited \$0)** . engine
~1259 tests green.

38 **?? ALPHA-SHAREABLE SESSION (2026-06-21) ? 3 PRs MERGED; Claude's half of the owner's
top priority is DONE:**

39 - **KEY CORRECTION (anti-spiral [[lesson-verify-engine-surface-before-scoping]]):** the
handoff said "do the B-P2 SPA ingest screen + M7 Cloud Run *service*" ? but **B-P2 was already
shipped** (khelsutra #56, live e2e in `DRY\_RUN\_CUJ.md` §9) and recon showed alpha-shareable is a
DEPLOY/AUTH task, not an SPA build. CORS is already env-driven; the engine needed no CORS
code.

40 - **Owner decisions (this session):** (1) pursue alpha-shareable via topology **(i)
Tunnel-to-a-box** (2) sub-topology = **SPLIT** (SPA on CF **Pages** + engine on `api.\*`
cloudflared tunnel + CF Access over both ? engine `HOSTING\_PLAN.md` §2), single-origin Caddy
kept as the alternative.

41 - **engine [#294](https://github.com/Khelsutra/badminton-highlight-indexer/pull/294)
(`0c0e064`) ? exposure-safety boot posture:** `backend/config/startup.py` fails fast at boot
(server-only `include\_exposure=True`) when `security.edge\_auth\_enabled` is ON but half-
configured ? `EXPOSED\_NO\_VIDEO\_ROOT` (fatal, jail unset), `EXPOSED\_EDGE\_AUTH\_INCOMPLETE` (fatal,
CF team/AUD), `EXPOSED\_AUTH\_EXTRA\_MISSING` (warn). **Default-OFF** (edge_auth off ? no-op;
worker never opts in). Aligned `auth.resolve\_tenant` whitespace-strip. Adversarial 3-lens review
(`wf\_35b735a9`) ? no bypass. +16 tests; 1259 green cross-OS.

42 - **khelsutra [#64](https://github.com/avidullu/khelsutra/pull/64) (`8bbc557`) ? SPA
`VITE\_API\_BASE`:** `apiBase()` env-driven (default same-origin `/api`) + `vite-env.d.ts` + 3
tests; build-smoke proved the override bakes in.

43 - **khelsutra [#65](https://github.com/avidullu/khelsutra/pull/65) (`4627830`) ? alpha
deploy kit:** `deploy/DEPLOY\_ALPHA.md` (full split runbook + CORS-preflight gotcha + posture
test + deferred notes) + `deploy/cloudflared.config.example.yml` + README/tracker pointers.

44 - **Discipline:** isolated PRs off `origin/master` (khelsutra in a dedicated
worktree ? main tree had sibling A8 WIP, since merged as #63), default-OFF, adversarial
review, full CI green cross-OS, merged own green PRs, tracker+changelog in-PR. **? REMAINING for
alpha = OWNER stand-up only** (tunnel + Pages + CF Access + key rotation per

`khelsutra/deploy/DEPLOY\_ALPHA.md`). **M1?M9-auth (prior sessions) detail below.**

45 ***? HUGE SERVING SESSION (2026-06-21) ? 6 PRs MERGED + a REAL cloud-GPU run, owner BATCH-AUTHORIZED the default-OFF code path + \$100/?10k spend:** **285** (docs \$8 D16/D17 + P3 reconcile) . **286 M5** (`backend/config/startup.py` per-profile fail/warn-fast checks + the **L4 profile-parity** proof; worker stays torch-free) . **287 M6** (`backend/compute/` ComputeBackend registry ? `CloudRunCompute` dispatch a Cloud Run **Job** + bucket-poll; `deploy/cloudrun/{Dockerfile,README}`; mocked) . **288 M8** (per-job **cost ledger** + v6 migration + versioned `pricebook` \$0 + `/cost` API) . **290 M9-auth** (Cf-Access JWT verify RS256 + `owner\_id` tenant tag; security review found NO bypass; alg=none + HS256-confusion locked) . **291 ops-agent codify` + `docs/CLOUD_GPU_DRYRUN_GUIDE.md`\*\* (`deploy/gcp/create_gpu_vm.sh` always bakes the Ops Agent). All **default-OFF**, isolated, **adversarial-reviewed (a workflow per PR)**, full-suite+cross-OS CI green, tracker+changelog in-PR. **? REAL M7 L4 RUN DONE + VERIFIED:** native WASB on a real L4 ? **22 rallies** on the smoke clip ? GCS out; VM deleted (\$0, ~\$0.21). ? the no-Gemini cloud run needs **`skip\_ai\_handoff=true`** (the long-flagged "0 rallies" cold-start fix). A 2nd dry run via `create\_gpu\_vm.sh` **confirmed Ops-Agent auto-installs** + found the **watermark-font gap** (fixed in #292: `bootstrap.sh` now installs `fonts-dejavu-core`). **M1?M4 (prior session) detail below.**

46 - **M1 ([#279](https://github.com/Khelsutra/badminton-highlight-indexer/pull/279), `ce22791`):** `deployment.profile` + `compute\_target` on `AppConfig` + `backend/config/presets.py` (PROFILE_PRESETS + `suggest\_profile`) + loader preset/precedence (defaults<preset<config.json<env via `\_deep\_merge`; no-profile path = exact old shallow merge) + auto-detect-as-SUGGESTION (D15). Pure/additive, profile=' == today. 3 minor review findings folded.

47 - **M2 ([#280](https://github.com/Khelsutra/badminton-highlight-indexer/pull/280), `e111add`):** `StorageConfig.input\_backend`/`input\_root` + `backend/storage/{ref.resolve\_input\_uri, \_\_init\_\_.resolve\_input\_ref/acquire\_local\_input/input\_is\_local}` + `main.py` API/CLI wired (acquire local; keep source URI for DB/report). **local = identity passthrough (byte-for-byte unchanged)**; bucket/Drive fetched to scratch (mirrors worker `cmd\_infer`). Unknown scheme?clean 400 (was a 500 regression ? caught by review); `local://` accepted on resolved key; hosted-mode rejects non-local; OS-independent anchored-path detection (os.path.isabs differs Win+py3.13). 1 major + 6 minor review findings folded. Suite 1105 green, cov 84.84%.

48 - **M3 ([#282](https://github.com/Khelsutra/badminton-highlight-indexer/pull/282), `2afd54f`):** configurable output/scratch base ? `backend/utils/paths.output\_base(config)` (returns `output.output\_dir`, default `"output"`); routed all 6 hardcoded `os.path.join("output", ?)` scratch sites in `trajectory\_hybrid`/`yolo\_hybrid`/`gemini` through it (create+cleanup same var). **DEFAULT "output" ? byte-identical** (golden + cross-OS green); a custom `--output-dir` now actually moves scratch (latent bug fixed). Default-OFF ? no Launch Report. `tests/test\_output\_base.py` + a yolo call-site capture; clean-bill focused review (yolo-coverage minor folded). Suite 1114 green.

49 - **M4 ([#283](https://github.com/Khelsutra/badminton-highlight-indexer/pull/283), `cee4baa`):** `DeviceContext` (`backend/pipeline/detectors/device.py`) + native WASB **CPU-fallback** via a new `device="auto"` (cuda-if-available-else-cpu). **Explicit "cuda" stays STRICT** (healthcheck still hard-fails without a GPU ? no silent slow-CPU downgrade; "cuda default unchanged"). CUDA probe **cached** (healthcheck?run_predict reuse); `\_effective\_device()` resolves before argv so "auto" NEVER reaches `wasb\_infer.py`; fail-fast on a typo'd device. `wasb\_infer.py` already supports cpu ? no change there. Device-selection tested offline (mocked subprocess); **real CPU-inference run = owner/GPU-verified.** `tests/test\_device\_context.py` + native-runner additions; clean-bill focused review (2 nits folded). Suite 1126 green, cov 84.96%.

50 ***? NEXT (priority order):**

51 1. *** ALPHA-SHAREABLE ? Claude's half DONE this session (#294/#64/#65).** Engine is exposure-safe by construction; SPA targets a split origin; the deploy kit + runbook are merged. *** REMAINING = OWNER stand-up** (not Claude-doable): on the box `pip install -e .[auth]` + the safe-exposed `config.json` + `RALLY\_CORS\_ALLOW\_ORIGINS` + rotate `GEMINI\_API\_KEY` + run `backend.main --server`; CF ? cloudflared tunnel (`api.khelsutra.guru`) + CF Pages (`app.khelsutra.guru`, `VITE\_API\_BASE`) + ONE CF Access app over both + the OPTIONS-preflight bypass. **Runbook = `khelsutra/deploy/DEPLOY\_ALPHA.md`.** *(A later UI polish, not the alpha blocker: a compute PICKER in the UI, D13/D15.)* Full record: [[ui-driven-cloud-serving-gap]].

52 2. **M11** (data-flywheel plumbing) ? ? privacy-sensitive (consent/data), give it FRESH focus: `backend/flywheel.py` capture?store?shadow-eval?goldenize reusing `workspace.py::for\_video` + `backend/eval/experiment.compare` + `backend/eval/promotion.py::promote\_if\_served\_safe`, behind `flywheel.\*`=OFF + a faked `consent\_attested`. ? depends on M9's not-yet-landed **v7 consent migration** (M8 took v6) +

counsel ToS/DPA; only a default-OFF skeleton is Claude-doable.

```
53      3. **M12** (`gdrive-api` OAuth StorageBackend) ? `backend/storage/gdrive_api.py`
`GDriveApiStorage(StorageBackend)` + a `gdrive-api://` scheme (regex allows the hyphen; add to
`_KNOWN`+`_backend_class`+the StorageConfig Literal) vs an INJECTED fake Drive (mirror `gcs.py`
DI); keep mount-only `gdrive://`. ? M9-consent cols + per-video P1 = a new **v7** migration (M8
took v6).
54      **? owner-only residual:** real M5 truly-local runlog (template pre-staged) · GCP spend
for the M7 *service* deploy + a real e2e · counsel ToS/DPA (M9-consent) · real GCP prices+FX +
the M8 usage-emission follow-up · Google OAuth app (M12 real) · CF team-domain/AUD+ingress-lock
· repo rename · DO droplet/token retire.
55
56      ## ? Icebreaker for the NEXT session (copy-paste)
57      > Continue the badminton-highlight-indexer ENGINE serving + UX track. FIRST: `git pull
--ff-only`, then read memory `session-handoff.md` + `current-state.md` (top) + [[ui-driven-
cloud-serving-gap]] + [[compute-stack-gcp-only]].
58      > STATE: **The cloud alpha is LIVE + proven end-to-end** (2026-06-22 night: a real match
? **27 rallies ? reel downloaded**, on the droplet `claude-do-rally-test`/`168.144.126.176`
behind CF Access at `app.khelsutra.guru`; fixed live: `app.` DNS?the tunnel, the Gemini key,
`RALLY_ALLOWED_HOSTS`). **Engine #294 + M11 #336 + M12 #338, khelsutra #64/#65 all merged.**
59      > **?? TOP NEXT ACTION ? owner LOCKED IN the GCP L4 (2026-06-22 night): spin up the L4
for the NON-GEMINI phase** (native WASB inference + owned-model training, NO Gemini). Run
**`bash deploy/gcp/create_gpu_vm.sh`** (defaults `RALLY_GPU=l4` ? `g2-standard-4` 24GB, zone-
sweeps Mumbai?Singapore, bakes Ops-Agent) ? pull corpus from `gs://khelsutra-rally-corpus`
([[gcs-data-source-of-truth]]) ? `python -m backend.worker infer|train` with
`skip_ai_handoff=true` ? **`bash deploy/gcp/teardown.sh delete` AFTER** ([[gcp-vm-always-
delete]]), **$100/?10k cap**. On-demand ~$0.74/hr Mumbai (?$122/interactive session, fine);
`RALLY_GPU=t4` fallback if L4 stocks out; add a Spot toggle (`--provisioning-model=SPOT`,
currently STANDARD at `create_gpu_vm.sh:41`) before any LONG training run. Full config/pricing =
[[compute-stack-gcp-only]].
60      > **Also queued ? 3 alpha-hardening issues from the live run (Claude-doable, default-
safe):** khelsutra#111 (SPA survive-refresh + live progress ? the 10-min poll ceiling timed out
~secs before a long job finished), khelsutra#112 (WhatsApp share the VIDEO via Web Share API,
not just text), engine#340 (idempotent `/api/process` ? no Gemini RE-BILL on refresh/"Try
again").
61      > Discipline: ONE isolated PR per item off `origin/master`, default-OFF + golden/cross-
OS-gated, adversarial review before commit, full `run_all_tests.py`+ruff+mypy green, merge own
green PRs, tracker+changelog in-PR, checkpoint memory. ? **shared checkout** (engine AND
khelsutra ? sibling sessions commit concurrently; khelsutra needs a dedicated **worktree**:
junction `web/node_modules` then **`rmdir` the junction BEFORE `git worktree remove`**). ? **the
LIVE alpha runs on the droplet** (SSH `~/ssh/khelsutra_droplet` root) ? don't disrupt the
`khelsutra-engine`/`cloudflared` services or the marketing site.
62
63      Prior session delivered the **engine compute/serving + doc-hygiene** track (10 PRs
merged: #263?#267, #270, #272?#274, #276):
64      - **M2 FINALIZED on a real GPU** ? `worker train --trajectory-source detector` on a GCP
**L4 (Singapore; Mumbai was stocked-out)** ? Gen-0 bundle `gs://khelsutra-rally-
corpus/weights/0.1.0-l4/` (honest **n=2 plumbing** result, not a quality model). Both VMs
**deleted**.
65      - **DigitalOcean DROPPED for compute ? GCP is the sole stack** (ADR-013; DO GPU not
enabled/credit-funded, Paperspace subscription-gated). [[compute-stack-gcp-only]] · [[gcp-vm-
always-delete]] · [[gcp-ops-agent-enable]].
66      - **DECOUPLED_COMPUTE delivered + ARCHIVED** ?
`docs/archives/past_projects/DECOUPLED_COMPUTE/`.
67      - **NEW tracked subproject: `docs/COMPUTE_DECOUPLED_SERVING/` + ADR-014** ? one pure
core (DETECT?WINDOW?STITCH, never branches on profile) + `ComputeBackend`/`StorageBackend`
profiles (**truly-local**, **cloud-serving** [Cloud Run GPU runs detect AND stitch, metered],
**cpu-mock**). **? AWAITING OWNER M0 DESIGN SIGN-OFF before any code.**
68      - **Doc governance:** `docs/DOC_STATUS.md` register + **archival due-diligence**
(honestly-update?then-archive; codified in CLAUDE.md; [[doc-status-register]]); per-video docs
reconciled; **data layer** carved into `docs/data_pipeline/` (no-ML), field-
ops/PMF?`archives/field-pmf/`, Roora?`archives/roora-vendor/`.
69
70      ? **Shared checkout** ? sibling sessions commit + flip branches here mid-session (hit
twice this session). **Branch from `origin/master` explicitly, re-verify HEAD before commit,
stage explicit paths, never `git add -A`.** [[gotcha-shared-checkout-branch-collisions]]. ?
```

```

**`sed -i` over a glob churns CRLF on all matched files** ? separate real changes with `git diff
--ignore-cr-at-eol` and revert the noise.
71
72     ## ? Next steps (resume here)
73     1. **? M0?M4 SHIPPED (#279/#280/#282/#283) ? the config/input/output/device SEAM LAYER
is COMPLETE ? NOW M5+ (mostly owner-gated).** Decisions locked in README **$2 D7?D15** (D7
scale-to-zero · D8 versioned DB pricebook USD/INR · D9 Cloudflare Access · D10 data-for-reels
trade adults-only · D11 Gemini-ON-until-floor + D12/M11 flywheel · D13 user-switchable profiles
· D14 NORTHSTAR gdrive-api OAuth = M12 · D15 suggest?confirm). **Engine build sequence:** ~~M1
deployment.profile~~ ? ~~M2 input_backend~~ ? ~~M3 output-base~~ ? ~~M4 DeviceContext + CPU-
fallback~~ **ALL DONE.** **? M5** = truly-local profile e2e (preset + startup checks + first
committed runlog) ? **? owner real-GPU** (needs a GPU box / owner's WSL machine to run
detect+stitch locally, then commit the runlog). **M6/M7** Cloud Run dispatch + container image
(? owner GCP spend), **M8** cost ledger + pricebook, **M9** edge-auth (Cf-Access), **M11** data-
flywheel harness, **M12** gdrive-api OAuth. **Per-video-workspace P3 (`output/chunks_*) is now
subsumed by M3 ? reconcile/close it.** **Claude-doable WITHOUT owner gating:** the M5
preset+startup-check code (the actual run is owner's); the M8 cost-ledger DB migration +
pricebook + aggregation (pure code, owner does the real-cost calibration); the M11 harness
plumbing. M6/M7/M9/M12 need owner cloud/counsel sign-off.
74     2. **Per-video workspace P1?P6** (#264 shipped P0): P1 v6 DB migration `workspace_uri` ?
P2 worker ? P3 `output/chunks_*` de-hardcode ? ? (Claude-doable, default-OFF).
75     3. **Ops-Agent codification into `deploy/gcp`** (auto-enable observability on every VM)
? small, [[gcp-ops-agent-enable]].
76     4. **[owner]** Grow the golden corpus (highest-leverage) · set ship-gate target #172 ·
full-corpus training (n?5) for real weights.
77     5. Full prioritized P0/P1/P2 list = `docs/NEXT_STEPS.md` top.
78
79     ## ? Open decisions / owner gates
80     - **M0 design sign-off** (the blocker above) + the COMPUTE_DECOUPLED_SERVING $8
questions.
81     - Doc-hygiene leftovers (`DOC_STATUS.md` $4): confirm the 3 COMPLETED top-level pointer-
stubs; `HOSTING_PLAN`/`UI_PROPOSAL` currency.
82     - Housekeeping: retire the shared D0 droplet `claude-do-rally-test` (~$24/mo) + the D0
token; rename repo off "badminton".
83
84     ## ? Ramp-up kit
85     - **Memory:** [[current-state]] (read first) · [[compute-stack-gcp-only]] · [[gcp-vm-
always-delete]] · [[gcp-ops-agent-enable]] · [[doc-status-register]] · [[gotcha-shared-checkout-
branch-collisions]].
86     - **Docs:**
`docs/COMPUTE_DECOUPLED_SERVING/{README,TESTING_STRATEGY,architecture.svg,runlogs/}` ·
ADR-012/013/**014** in `docs/archives/decisions/DECISIONS.md` · `docs/NEXT_STEPS.md` ·
`docs/DOC_STATUS.md` · `docs/PER_VIDEO_WORKSPACE.md` · `deploy/gcp/README.md` (GPU runbook;
teardown defaults to `delete`).
87     - **Code anchors (the pure core the serving project builds on):**
`backend/pipeline/detectors/base.py` (DetectorRunner CSV contract) ·
`tracknet_runner.py::trajectory_to_action_windows` ·
`backend/pipeline/stitcher/compiler.py::compile_highlights` ·
`backend/pipeline/segmenters/trajectory_hybrid.py::_resolve_runner` (the compute seam) ·
`backend/storage/*` · `backend/worker/___main___py` · `backend/utils/workspace.py`.
88
89     ## ? Parallel track (NOT this session ? sibling sessions)
90     **KhelSutra brand-site + product UX/Hindi-Kannada localization** (repo
`Khelsutra/khelsutra` + #275 here) ? [[next-session-ux-localization]] / [[khelsutra-domain-
launch]]. The **rally-quality / owned-model** track is live too (R-series,
`RALLY_QUALITY_RESEARCH.md`; gated on corpus growth). These are background to the
compute/serving resume above.

10     # Current state ? updated continuously (see [[working-agreement-checkpoints]])
11
12     > **Scope of this file = LIVE only:** the current handoff + *today's* checkpoints + open
PRs/decisions. Keep it read-first-short (?1 page). Older checkpoints are archived in [[current-
state-archive]] ? when today's checkpoints age out (next clean-slate day), move them there,
don't let them pile up here.
13
14     ***? 2026-06-29 ? rally code-review fixes MERGED; P2b is the next pick-up. READ [[next-
session-rally-finding-b-promotion]].** A code-review of rally detection (done in a now-deleted
sibling clone) found 3 issues, all fixed + merged to `master` ***0c9c693`** (main clone was
`0b4f492` ? **pull first**): **A** `_spread` ceil-fix (unconditional), **B**
`_trim_inactive_tail` temporal-density behind **inactivity_temporal_density` (default-OFF,
zero-regression no-op)**, the `rally_seg_eval` A/B CLI (--[vs-]inactivity-temporal-density`) ?
PRs ***#394** + ***#395**; collector-C skipped-row warning **sdc#50**. ? ***#393 was CLOSED by a
branch-rename, not merged** ? #394 is the roll-forward ([[lesson-branch-rename-closes-open-
pr]]). ***? NEXT (owner-requested): P2b** ? GPU + golden labels + F:\ data are now LIVE ? run the
golden A/B at SERVED, **promote-or-reject** the flag (`promote_if_served_safe`, no
`tol_f1`/dual-set regression + a Launch Report), run the full suite incl. now-unlocked
GPU/golden paths, then a **GO/NO-GO launch-readiness report for owner signoff** (recommend,
don't decide). Runbook = `docs/RALLY_DETECTION_FIXES_PLAN.md` §8 Q2.
15
16     ***? SESSION WRAP ? 2026-06-23 (owner called a clean slate; out of budget, "human runs
the loop" until quota refresh). READ FIRST on return.**
17     - **THE WIN:** owner demoed a small clip ? highlights to a friend = ***"pure bliss."**
The whole cloud/serving/docs arc this session shipped + merged.
18     - **WHAT SHIPPED (all merged):** cloud compute-picker **validation method** (#341 ?
`result.compute.path` proves which backend ran + the GCP-verifiable Cloud Run execution;
`scripts/verify_compute_path.py`; live-proven cloud?cloud_run+22 rallies, local?in_process) .
async `/api/compile` (#339/#108) . #342 GOOGLE_CLOUD_PROJECT guard . user guide
**`docs/CREATING_REELS.md`** (#343) . operator runbook
**`docs/CONVERT_GCS_VIDEOS_TO_HIGHLIGHTS.md`** + committed `deploy/cloudrun/cloudbuild.yaml`
(#346) . **`khelsutra/deploy/GPU_VM_SERVING.md`** (#113, owner-merged) = move the live engine
off the droplet onto an L4 GPU VM + cut the token-managed tunnel over, with a **Gemini?WASB
detection switch**. Droplet full-install suite GREEN (1461 passed).
19     - ***? OPEN THREADS for return (prioritized):** (1) ***? [khelsutra
#114](https://github.com/avidullu/khelsutra/issues/114)** ? CF Access: an ALLOWLISTED guest
email still couldn't sign in (blocks sharing the alpha; likely the email isn't in the right
Access app's policy / selector-type / OTP delivery ? full triage in the issue). (2) Owner wants
a **DOC-CONSOLIDATION pass** (deferred ? budget). (3) Backlog (`docs/BACKLOG.md` ? *Batch /
declarative orchestration*): a **one-YAML `indexer --batch`** driver + a **one-shot GPU-VM
`serving-startup.sh`** (design hinge = secrets out of plaintext metadata ? Secret Manager). (4)
Make the cloud toggle live on the alpha (owner deploy ? GPU VM per #113, or the droplet stays).
20     - **STATE:** alpha LIVE on the droplet (CPU, `gemini` segmenter) at
`api.khelsutra.guru`; GPU-VM-serving is documented not deployed; 0 of my PRs open; GCP $0 (all
validation resources torn down); only sibling worktrees remain. [[cloudrun-gpu-serving-gotchas]]
[[gotcha-shared-checkout-branch-collisions]]
21
22     **Checkpoint:** 2026-06-23 (**CLOUD TOGGLE LIT + VALIDATION METHOD + LIVE E2E PROVEN +
user guide + droplet full-suite**). master `688d28f`. Owner: "light up the cloud compute toggle
with Cloud Run + a good validation method to ensure the intended path was taken" ? then "run the
test on the droplet with a full install" ? "write a doc to help users set up + create reels."
ALL DONE:
23     - ***? Validation method ? engine [341](https://github.com/Khelsutra/badminton-
highlight-indexer/pull/341) MERGED (`d92cc10`):** compute-path PROVENANCE ? the job result
carries `compute={path:"in_process"|"cloud_run"|"not_run", requested, execution, job, region,
```

outputs_uri}` (the cloud `execution` = the real Cloud Run execution name, GCP-verifiable).
`ComputeResult.execution` threaded via `run\_infer`; honest failure records (path=cloud_run only when it actually dispatched+ran, else not_run); `[COMPUTE]` audit log;
`\*\*scripts/verify\_compute\_path.py`** asserts the path + cross-checks the execution in GCP.
`\*\*Also forwards `indexing.skip_ai_handoff` to the cloud job\*\*` so the picker's cloud path yields rallies without a Gemini key. Adversarial review caught 2 honesty bugs (false "report carries it" claim; misleading log on a never-dispatched reject) ? fixed. Suite 1480?.

24 - `\*\*? LIVE E2E PROVEN (\$0 after teardown):\*\*` rebuilt the Cloud Run L4 image + Job; ran a local `\*\*cloud-serving\*\*` engine (`deployment.profile=cloud-serving` + `skip\_ai\_handoff=true` override + `CLOUD\_RUN\_JOB/REGION=asia-southeast1/PROJECT` + `storage.output\_root`) ?
`/api/capabilities` reported `\*\*cloud\_available:true\*\*` (toggle lit). `verify\_compute\_path.py`
`--compute cloud` ? `\*\*path=cloud\_run`, execution `rally-worker-qbcqb`** (GCP cross-check: succeededCount=1) ? `\*\*22 rallies\*\*` (skip_ai_handoff forward works). `--compute local` ?
`\*\*path=in\_process\*\*` ?. Both directions provably correct. Proof logs in
`artifacts/cloudrun\_lightup/`. Job+image+AR repo+prefix deleted.

25 - `\*\*? Verify-script Windows bug ? [#344](https://github.com/Khelsutra/badminton-highlight-indexer/pull/344) OPEN:\*\*` `--verify-gcp` spawned bare `gcloud` (Windows = `gcloud.cmd`, WinError 2) ? resolve via `shutil.which`. Found during the live run (path assertion passed first).

26 - `\*\*? [#342](https://github.com/Khelsutra/badminton-highlight-indexer/pull/342) MERGED` (`688d28f`) ? `GoogleCloudRunJobClient.run\_job` now guards an unset `GOOGLE\_CLOUD\_PROJECT`** (originated as a spawned background-task chip). It passed `project` (`Optional[str]`, from the `GOOGLE\_CLOUD\_PROJECT` env in `get\_compute\_backend`, can be None) straight to
`JobsClient.job\_path(project: str, ?)` ? a real latent bug: mypy `arg-type` visible ONLY with `google-cloud-run` installed (CI green because the SDK is deliberately NOT a CI/test dep), and at runtime a None/empty project builds a bogus `projects/None/locations/?` path on the real dispatch. Fix = guard BEFORE the lazy SDK import (so it's CI-testable, SDK-absent) ? raise a clear `RuntimeError` naming the env var; narrows `Optional[str]` ? `str` for `job\_path`.
+`test\_real\_client\_rejects\_missing\_project` (None + ""); compute suite 14?15, full suite
`\*\*1488?`, cov `\*\*85.86%`, all 10 CI green. Verified the error reproduced at `cloud\_run.py:74` pre-fix (the earlier broad-mypy backend- false-pass was a stale `mypy\_cache` ? caught via
`--no-incremental`). Follow-up doc [#345](https://github.com/Khelsutra/badminton-highlight-indexer/pull/345) (`9329473`) noted `GOOGLE\_CLOUD\_PROJECT` is required in
`deploy/cloudrun/README.md` Gotchas. [[working-agreement-merging]]

27 - `\*\*? Droplet FULL-install suite GREEN:\*\*` pushed master?`root@168.144.126.176:~/bhi-fulltest`, fresh venv + `pip install -e .[dev,auth,storage-gcs,storage-s3]` + torch CPU + ffmpeg/cv2 libs ? `\*\*1461 passed, 12 skipped\*\*` (the skips = the private `obsreport` git+ssh dep, not installed). Droplet restored (dir removed, 1.6G freed).

28 - `\*\*? User guide ? [#343](https://github.com/Khelsutra/badminton-highlight-indexer/pull/343) OPEN:\*\*` new `\*\*docs/CREATING\_REELS.md\*\*` (end-user: prereqs?`indexer`
`--app?`wizard?reel via web UI AND the API chain
capabilities?upload/gs://?process[202+poll]?query?compile[202+poll]?download; +cloud toggle +troubleshooting). Researched via a verify-then-write workflow (every command/endpoint/flag checked vs the shipped engine; LIGHT-tier-honest). Indexed in docs/README.md + DOC_STATUS.md §3d.

29 - `\*\*? NEXT:\*\*` merge #343+#344 on green; clean worktrees (bhi-computeval/bhi-userdoc/bhi-verifyfix). Owner follow-up to make the toggle live on the ALPHA = deploy a persistent Cloud Run Job + flip the droplet engine to cloud-serving (a deploy decision, not code). [[cloudrun-gpu-serving-gotchas]] [[gcp-vm-always-delete]] [[working-agreement-merging]]

30

31 `\*\*Checkpoint:\*\*` 2026-06-22 (`\*\*ASYN` `api/compile` [#329] ? engine [#339] + SPA [#108] BUILT; kills the Cloudflare 524 on slow reel stitches**). engine PR
[#339](https://github.com/Khelsutra/badminton-highlight-indexer/pull/339) (branch `feat/async-compile`, CI running?merge on green), khelsutra
[#108](https://github.com/avidullu/khelsutra/pull/108) `\*\*MERGED\*\*` (`ed33a51`). The owner's first real reel 524'd (origin timeout) while the reel actually built ? `api/compile` ran the ffmpeg stitch SYNC (~3min on the 2-core droplet > CF's ~100s edge). `**Fix = make it async, mirroring
`api/process`:** submit ? `\*\*202 + compile job id\*\*`; cheap checks (video/segments/floor/safe-name) fast-fail 4xx at submit; the stitch runs on the worker; the client `**polls
`api/jobs/{id}`**`. `**Engine #339:**` schema `**v9**` (`jobs.kind` 'process'|'compile' NULL?process + `jobs.params` JSON; additive/idempotent) + `create_compile_job` + `_run_claimed_job`
dispatches on `kind` (compile?`execute\_compile`, else unchanged process path; cost/flywheel process-only) + `\_resolve\_compile` shared submit/worker + a stitch error ? clean
`done`+`result.status=failed` (no crash) + the in-repo `backend/api/static/app.js` polls + `re-bundled` `backend/ui/`** from #108. Suite `\*\*1473?`, ruff+mypy clean, cov `\*\*85.60%`, adversarial

review clean (its one finding ? "clients must poll" ? fixed via app.js + the re-bundle). **SPA #108:** `compileReel` submit?`pollCompileJob`?`CompileResult`; a `done`+`failed` result throws an ApiError carrying the engine message (so classifyError surfaces it, not "engine unreachable"); `onBuild` unchanged (still `highlightUrl`, split-origin-safe); 228 web + 95 site tests green. ? **schema head is now v9 = compile job (NOT compute-picker ? that's v8); M9-consent migration ? v10** (the prior checkpoint's "M9-consent=v9" is now stale ? check `PRAGMA user\_version`). **Deploy:** #339 ships the API + the poll-aware bundle together ? deploy as ONE unit (don't deploy async engine vs an old sync bundle). [[gotcha-shared-checkout-branch-collisions]] [[working-agreement-merging]]

32

33 **Checkpoint:** 2026-06-22 (**M11 + M12 serving-code DONE ? 2 PRs merged; next = pair on the alpha go-live**). Owner: "build 3 (M11) then 4 (M12) then we pair on the alpha (2); tell me the counsel inputs and I'll have them ready." Both Claude-doable serving items merged on green (isolated worktree off origin/master): **M11** data-flywheel skeleton [336](https://github.com/Khelsutra/badminton-highlight-indexer/pull/336) (`334ad0f`) ? `backend/flywheel.py` capture/shadow_eval/propose_promotion + `FlywheelConfig` (default-OFF) + gated `\_maybe\_run\_flywheel` hook; **INERT via TWO guards** (`enabled=False` AND `consent\_attested` faked-deny ? captures nothing in prod); reuses workspace/eval/promotion/storage; **NO migration**; +14 tests incl. a guardrail-lock; adversarial review (`wf\_1ee5ffdf`) inert_guarantee=yes. **M12** `gdrive-api`:// OAuth StorageBackend [338](https://github.com/Khelsutra/badminton-highlight-indexer/pull/338) (`819e395`) ? `backend/storage/gdrive\_api.py` (path?Drive-id resolve, **idempotent** put, lazy Google imports, injected-fake hermetic tests) + scheme wiring (ref/`\_\_init\_\_`/models + hyphen?underscore settings); adversarial review (`wf\_ae8c9b0f`) no_regression=yes, folded the idempotent-put fix. Suite 1467? cross-OS, ruff+mypy clean. ? **schema ladder drifted mid-session: v7=`locale`, v8=compute-picker ? M9-consent migration is now v9** (check `PRAGMA user\_version` first). **? NEXT = OWNER-DRIVEN alpha go-live pairing** (CF tunnel+Pages+Access + Gemini-key rotation per `khelsutra/deploy/DEPLOY\_ALPHA.md`); M11-live + M9-consent need the counsel ToS/DPA 7-pt checklist ([[ui-driven-cloud-serving-gap]]). Sibling tracks advanced in parallel: M6?/api/process (#333), Cloud-Run env (#334), the SPA compute-picker + real Cloud-Run-GPU validation (below). [[lesson-verify-engine-surface-before-scoping]]

34

35 **Checkpoint:** 2026-06-22 (**LOCAL-APP ? CLOUD RUN path ? ? ALL 4 ITEMS DONE (5 PRs merged + real-GPU e2e VALIDATED + proof on the local box + \$0 teardown)**). engine master `334ad0f`+, khelsutra master `f67dfe7`. Owner: "build the cloud Run path in the order + ensure due-diligence testing; I approve the GPU VM budget until you get a clean e2e screencast on my local machine." APPROVED ORDER = (1) API?compute-seam wiring ? (2) P3a micromamba Dockerfile ? (3) SPA compute-picker (engine 3a + SPA 3b) ? (4) real Cloud Run validation + screencast. **PRs: #333 (1), #334 (2), #335 (3a), khelsutra #104 (3b), #337 (the cloud-dep fix item-4 found).**

36 - **? #104 ? compute-picker SPA half (3b)** (khelsutra master `f67dfe7`): IngestPanel probes `/api/capabilities`, shows a "On my computer"/"In the cloud" toggle ONLY when `deployment.cloud\_available`, gates CLOUD behind a required cost-ack (disabled controls + early-return), threads `compute` ? `POST /api/process`. Default-OFF (no picker / `compute` omitted when cloud unavailable). New `ingest.compute.\*` strings x6 locales + site mirror (kn/hi/es/da/id AI-drafted ? native review pending). typecheck + 226 web tests + build + coverage + 89 site tests green; adversarial review clean.

37 - **? ITEM 4 DONE ? real Cloud Run L4 GPU e2e VALIDATED, both directions, \$0 teardown.** Proof bundle on the local box = **`artifacts/cloudrun\_e2e\_validation/`** (`RUN\_TRANSCRIPT.md` + `cloudrun\_e2e\_reel.mp4` 22-rally 1080p reel + `contact\_sheet.png` + Half-A/B logs + intervals + `TEARDOWN.md`). **Half A** (direct execute) and **Half B** (the LOCAL control plane dispatching `worker infer` in cloud-serving mode ? bucket-poll ? ingest) BOTH produced **22 rallies** on `mahadevpura\_smoke\_180s.mp4` (deterministic vs the prior local-L4 run), `cuda True`, 325s detect; the local box then stitched the cloud-detected intervals into the reel (the M6 split proven). **Total spend ? \$0.60, \$0 ongoing** (Job + image + AR repo + validation prefixes all deleted; corpus untouched; worktrees removed).

38 - **? The first real L4 execution CAUGHT A BUG the mocks couldn't ? engine [337](https://github.com/Khelsutra/badminton-highlight-indexer/pull/337) MERGED** (`5fb55e9`): the Job booted + GCSFuse-mounted the bucket, then died at the first gs:// fetch ? `ModuleNotFoundError: No module named 'google.cloud'` (`backend/storage/gcs.py:24`); the Dockerfile did a bare `pip install .` but the cloud worker does its gs:// I/O through `backend.storage`. Fix = `pip install "[storage-gcs]"` + a structural guard (suite 1457?).

39 - **? REUSABLE GOTCHAS for the next cloud run:** (1) Cloud Run **L4 GPU is region-limited** to `asia-southeast1/europe-west1/europe-west4/us-central1/us-east4` (NOT Mumbai) ? use **asia-southeast1 (Singapore)** + **`--no-gpu-zonal-redundancy`** (zonal-redundant GPU is capacity-blocked). (2) Weights (WASB-C3 not baked) ? **GCS volume mount** of the corpus bucket ?

```

`/mnt/corpus`, `WASB_WEIGHTS=/mnt/corpus/models/wasb_badminton_best.pth.tar` (no image change).
(3) **Git Bash mangles `/mnt/...` flag values (MSYS path-conv) ? run gcloud GCS-mount/job
commands via the PowerShell tool** (`MSYS_NO_PATHCONV=1` breaks gcloud's launcher). (4) cloud-
serving sets `skip_ai_handoff=False` ? **must override `--set indexing.skip_ai_handoff=true`**
for a pure-engine (no-Gemini-key) run, else the hybrid segmenter `return []` (0 rallies). (5)
Cloud Run pins the image DIGEST at create ? `jobs update --image ? :latest` after a rebuild. (6)
The local control plane needs `pip install google-cloud-run` + ADC (`gcloud auth application-
default`). ***? Owner literal-screencast option:** replay `indexer --app` against a cloud-
configured engine + drive the SPA picker while recording. [[gcp-vm-always-delete]] [[compute-
stack-gcp-only]] [[ui-driven-cloud-serving-gap]]
40      - ***? #333 ? API?Cloud-Run wiring** (COMPUTE_DECOUPLED M6 ? the API path).
`/api/process` now offloads DETECT to a Cloud Run GPU Job when
`deployment.compute_target=cloud_run` + ingests its `intervals.csv` rallies back into the API DB
so query/compile are unchanged. `backend/main.py::maybe_dispatch_remote` +
`_ingest_remote_segments`; **DEFAULT-OFF** (returns None for every non-cloud target ? in-process
path byte-identical). Worker gained `_fail(rc)` failure-markers (no more 30-min hang on
validation/segmenter fail ? the major review find). Cloud path requires a `gs://`-resolvable
input (fast-fail on local) + `storage.output_root`. Destroy-after-confirm preserved (prune
partial cloud rows on any failure).
41      - ***? #334 ? P3a Dockerfile** (`deploy/cloudrun/Dockerfile`): micromamba + conda-forge
(BSD, **no Anaconda ToS**) for the py3.8 WASB env, replacing Miniconda+`conda tos accept`. Cites
ADR-005 (permissive licensing).
42      - ***? #335 ? compute-picker engine half (3a)** (master `6d3d054`):
`ProcessRequest.compute` (`"local"|"cloud"|None) per-request override +
`get_compute_backend(target_override=)` + `_cloud_available()` + `deployment.cloud_available` in
`/api/capabilities` (SPA shows the toggle only when cloud can dispatch). **Adversarial review (1
Agent) caught a BLOCKER:** `/api/process` is async (202?persist job?worker reconstructs the
request) so `compute` was dropped across the boundary ? **schema v8 `jobs.compute` column** +
`create_job`/_`_job_to_request` thread it through; boundary regression tests lock it. Suite
**1443?**, ruff+mypy clean, cov **85.39%**, all 10 CI green.
43      - ***? NEXT (the order's tail):** **3b SPA compute-picker** (cross-repo
`avidullu/khelsutra`: a "run on my machine"/"run in the cloud" toggle shown when
`deployment.cloud_available`, a cost-confirm, send `req.compute`) ? **4 REAL Cloud Run
validation** (owner approved GPU spend): `gcloud builds submit -f deploy/cloudrun/Dockerfile` ?
`gcloud run jobs create rally-worker --gpu 1 --gpu-type nvidia-l4 --cpu 4 --memory 16Gi` ?
control plane `DEPLOYMENT_PROFILE=cloud-serving` + `CLOUD_RUN_JOB/REGION/PROJECT` ? drive a real
`gs://` clip end-to-end ? **e2e proof saved to the user's local machine** (the "screencast").
GCP auth = `gcloud` as `avi.dullu@gmail.com` / project `gen-lang-client-0306026826`, corpus
bucket `gs://khelsutra-rally-corpus` (videos/labels/weights), GPU quota=1. [[compute-stack-gcp-
only]] [[gcp-vm-always-delete]] [[ui-driven-cloud-serving-gap]] [[gotcha-shared-checkout-branch-
collisions]]
44
45      **Checkpoint:** 2026-06-22 (**owner-asked green-PR MERGE SWEEP + eval re-ground +
backlog; combined master VERIFIED green; 0 open PRs**). master `9b37269`. Owner: "merge the
green PRs (coverage + green CI), finish the worker fix + gate-A re-ground, backlog the optional
golden-fixtures items, fix/archive completed docs." **Merged 3 ready-green PRs** (no file
overlap; none product/strategy/licensing): **#316** DATA_IN_GCS corpus map (docs ? merged FIRST
so #319's `7b` code-comment refs resolve), **#320** nightly Cloud-Run scheduler scripts (shell-
only), **#319** worker dated-label fix (a sibling pushed **+2 skip-branch coverage tests** onto
the branch ? merged the better version; suite 1418?1428). **#322 = gate-A litmus re-ground
(this session)** ? confirmed the local "failure" was corpus DRIFT not a regression (golden grew
**9?15**, [[golden-corpus-grew-9-to-15]]); re-measured + re-pinned proposal **1.36/0.79/+0.03**
& served **0.023/0.90** + `QUALITY_ITERATIONS.md`; **a parallel session's IDENTICAL #324 was
closed as a duplicate** (independent cross-validation, same pins). **#323 = golden-fixtures
BACKLOG (this session)** ? `BACKLOG.md` new *Golden regression fixtures* section: $9 DoD
remainder (**M4** quality-floor, **P0** name-rename) + optional **01/02**. **Docs-archive = NONE
archive-ready** (GOLDEN_REGRESSION_FIXTURES non-terminal per its own $9; only candidate = the
hardening pointer-stubs, DOC_STATUS finding #4 ? needs owner confirm). **Combined-master
VERIFIED: `run_all_tests.py` w/ corpus manifest = 1428?/2 skip (gate-A litmus runs+passes), ruff
clean.** ? ~10 concurrent worktrees/sessions ? isolated all work in throwaway worktrees off
`origin/master`, explicit-path staging, cleaned up mine; a sibling's redundant gate-A branch
`fix/served-gate-a-regrounded-15clip` is checked out in the MAIN tree (owner trimming
concurrency). [[working-agreement-merging]] [[golden-corpus-grew-9-to-15]] [[decision-rigor-

Workflow launched in background. Task ID: wwi2c0w2d

Summary: Deep audit of all repos under khelsutra-guru: critical fixes + tech debt, adversarially verified

Transcript dir: C:\Users\avidu\.claude\projects\C--Users-avidu-Projects-badminton-highlight-indexer\c1fcb4aa-537d-41fd-858e-53f93349bf5a\subagents\workflows\wf_41c8dc8a-8a4

Script file: C:\Users\avidu\.claude\projects\C--Users-avidu-Projects-khelsutra-guru-badminton-highlight-indexer\c1fcb4aa-537d-41fd-858e-53f93349bf5a\workflows\scripts\khelsutra-multi-repo-tech-debt-audit-wf_41c8dc8a-8a4.js

(Edit this file with Write/Edit and re-invoke Workflow with {scriptPath:

"C:\Users\avidu\.claude\projects\C--Users-avidu-Projects-khelsutra-guru-badminton-highlight-indexer\c1fcb4aa-537d-41fd-858e-53f93349bf5a\workflows\scripts\khelsutra-multi-repo-tech-debt-audit-wf_41c8dc8a-8a4.js"} to iterate without resending the script.)

Run ID: wf_41c8dc8a-8a4

To resume after editing the script: Workflow({scriptPath: "C:\Users\avidu\.claude\projects\C--Users-avidu-Projects-khelsutra-guru-badminton-highlight-indexer\c1fcb4aa-537d-41fd-858e-53f93349bf5a\workflows\scripts\khelsutra-multi-repo-tech-debt-audit-wf_41c8dc8a-8a4.js", resumeFromRunId: "wf_41c8dc8a-8a4"}) ? completed agents return cached results.

You will be notified when it completes. Use /workflows to watch live progress.

12. user (2026-07-02T02:47:31.403Z)

Next wakeup scheduled for 08:43:00 (in 1529s). Nothing more to do this turn ? the harness re-invokes you when the wakeup fires or a task-notification arrives.

13. user (2026-07-02T02:47:31.451Z)

please do make sure to sync all the repo to remote head

14. user (2026-07-02T02:47:52.340Z)

=== badminton-highlight-indexer [master]: in sync (behind=0 ahead=0)

HEAD: e410136 api: /api/videos surfaces fps + resolution (from the stored ffmpeg details) (#413)

=== khelsutra [master]: in sync (behind=0 ahead=0)

HEAD: f9eea14 web: resilient video-summary readers + show fps in the library (#140)

=== rally-annotator [main]: in sync (behind=0 ahead=0)

HEAD: 3d604bc docs: sync READMEs with current state (multi-agent audit fixes) (#25)

=== sports-data-collector [master]: in sync (behind=0 ahead=0)

HEAD: adcd206 fix(db): set SQLite busy_timeout so concurrent writers wait, not error (P9) (#53)

=== sports-obsreport [main]: in sync (behind=0 ahead=0)

HEAD: 1f72c1c feat: configurable highlights item_noun (v0.1.3)

15. assistant (2026-07-02T02:48:01.872Z)

All 5 repos are confirmed at remote head ? `behind=0 ahead=0` on every one:

Repo	Branch	HEAD
badminton-highlight-indexer	master	e410136` (#413)
khelsutra	master	f9eea14` (#140)
rally-annotator	main	3d604bc` (#25)

```
| sports-data-collector | master | `adcd206` (#53) |  
| sports-obsreport | main | `1f72c1c` (v0.1.3) |
```

Two notes: sports-data-collector still has its local WIP (modified `.gitignore` + an untracked nested directory) ? that doesn't affect sync and I'm leaving it untouched pending the audit's read-only inspection. The audit agents are reading these same trees, so they're now guaranteed to be auditing remote-head state.

The audit workflow is still running ? I'll present the prioritized plan for your approval when the verification passes finish.

<status>completed</status>  
<summary>Dynamic workflow "Deep audit of all repos under khelsutra-guru: critical fixes + tech debt, adversarially verified" completed</summary>  
<result>{"summaries":[{"finder":"engine:audit-doc-reconcile","repo":"badminton-highlight-indexer","summary":"Engine repo is healthy and fast-moving: master at e410136 (2026-07-02), 22 commits merged since 06-26, ~1500 tests, coverage ~85%, CI green on master (trusted). The per-project docs' own $7 trackers are remarkably accurate ? every ? claim I spot-checked (D13/ByteTrack #386, 01 Gemini GC #380, B1 #385, B2/P17 #378, B3/B6 config fixes) is verifiably true in code. The rot is concentrated in the INDEX layer (DOC_STATUS.md, docs/README.md, BACKLOG.md, NEXT_STEPS.md header), which lags reality by ~15 shipped PRs, and in two designed-but-unstarted regression tracks (M4 quality floor, decision-snapshot). The single biggest live debt: the main.py god-module split (D1/P10) is stalled ? PR #390 sits open and CONFLICTING since 06-26 while main.py grew 52% (1448?2198 lines) from 8 new endpoint PRs landing in it."}, {"finder":"engine:correctness","repo":"badminton-highlight-indexer","summary":"The engine is a ~2200-line god-module orchestrator (backend/main.py) over a well-factored worker/storage/compute substrate; master is current (HEAD e410136) and CI is trusted green with ~1500 tests. The async job plumbing (claim_due_job CAS + single-worker executor + single-instance DB lock) and the schema ladder (v9, idempotent ALTERs, backup-before-migrate, downgrade guard) are genuinely solid ? most crash-safety patterns hold up under scrutiny. The dominant hot-path debt is lifecycle, not logic: paid-segmenter idempotency is still missing (#340 open, confirmed at HEAD), remote-input scratch copies are never reclaimed anywhere (acquire_local_input mkdtemp-per-call, worst on /api/source where every browser Range request re-downloads the full remote video), and the packaged-app path story is inconsistent (upload_dir CWD-relative vs app-home-rooted output_dir; config output.output_dir dead on the CLI path). Cloud-serving has an owner-gated GPU cost leak (poll timeout never cancels the Cloud Run execution). Findings are 2xP1, 5xP2, 2xP3; only #340 is already tracked."}, {"finder":"engine:structure","repo":"badminton-highlight-indexer","summary":"Engine repo at master e410136 (current with origin, 2026-07-02). Backend is ~28.9k lines of Python across ~29k total; merge velocity is high (9 PRs touching main.py alone since 06-26). CI is green on master per audit ground rules. The dominant structural debt is the D1 god-module problem: backend/main.py is now 2,198 lines and grew +401 lines (+22%) in the six days since split PR #390 was opened ? that PR is now CONFLICTING and rotting. The transitional module-globals shim (extracted API modules re-importing backend.main at call time) creates a 3-module import cycle and keeps the two largest modules mypy-quarantined. Secondary debt: four more >800-line modules, duplicated Stage-2 AI-handoff logic across two live segmenter families, and small hygiene items (7 tracked scratch/ scripts violating the repo's own convention, 4 stale remote branches). Notably, audit item D13 (ByteTrack -> trackers) is verified DONE ? no vendored ByteTrack directory exists and person_detector.py uses trackers.ByteTrackerTracker; only a stale docstring remains."}, {"finder":"engine:ci-tests","repo":"badminton-highlight-indexer","summary":"Engine CI is healthy: master is 15/15 green (last red master push was 2026-06-24, fixed same day), the Tier-1 nightly (nightly.yml) has run green daily since it landed 2026-06-26 with zero nightly-failure issues ever opened, and 1558 tests collect cleanly. All jobs in both workflows carry per-job timeouts, local ruff 0.15.16 passes clean, and the coverage floor (70) is enforced in both the per-PR and nightly full-suite lanes. Debt is concentrated in four places: the ci.yml/nightly.yml copy-paste duplication tracked by #384 has now actually drifted (ci.yml gained a link-check lane on 06-30 that nightly never got, plus timeout divergence); PR #390 (the D1 god-module split) has sat OPEN with a red full-suite check
```

since 06-26; roughly 27 of 1558 tests silently skip in CI (17 obsreport-gated, 2 reportlab/pypdf, 7 golden-data-gated by design, 1 platform) with no -ra visibility; and the mypy gate is environment-dependent (a misplaced type-ignore in backend/storage/gcs.py makes mypy fail on any box with google-cloud libs installed while CI stays green)."}, {"finder": "engine:security-config", "repo": "badminton-highlight-indexer", "summary": "Engine repo (Python, ~1500 tests, CI trusted green on master at e410136). Security/config posture is largely healthy: deploy/gcp/buckets.env single-source (#410) is properly wired into every deploy script, no literal secrets anywhere in the tree (grep for AIza/sk-/ghp_/private keys = zero), redaction and edge-auth (CF Access JWT, default-off) are carefully built, startup exposure checks (M9) cover jail/team+AUD/auth-extra/host-allowlist, CI has copyleft license-fail lanes and no pull_request_target/secrets usage, and .gitignore is UTF-8 with artifacts/, output/, *.db all ignored and untracked. Remaining debt clusters in four places: a wildcard CORS default that undermines the localhost-appliance DNS-rebinding guard, the still-open #327 path-jail-vs-gs:// ingest gap, supply-chain pinning (mutable git tag duplicated in 5 files, no lockfile), and small hygiene items (tracked scratch/ files, retired-D0 deploy dir still live-coupled)."}, {"finder": "khelsutra:code", "repo": "khelsutra (avidullu/khelsutra) ? SPA web/ + marketing site/", "summary": "The khelsutra repo is in good code health: the web/ SPA is strict-TS (strict + noUnusedLocals/Parameters, web/tsconfig.json:17-20), has 29 test files with a CI-enforced ratcheted coverage floor (statements 92 / branches 87 / functions 84 / lines 92, web/vite.config.ts), and components stay small (largest is App.tsx at 417 lines; the just-landed VideoLibrary.tsx is 101 lines). CI (3 jobs: site tests, web typecheck+coverage+build, real-browser layout/render/all) is green on master (run 28532935786). i18n key parity is perfect ? 473 keys in all 6 locales, 0 missing/0 extra, guarded by locales-drift + hygiene tests ? and the vendored rally-annotator core is byte-in-sync with upstream HEAD (3d604bc). API client vs engine: every endpoint the SPA calls exists on the engine with matching shapes; no contract drift found. The real debt is at the seams: the engine's vendored SPA bundle is 8 feature-PRs stale (built 2026-06-22 vs SPA source 2026-07-01), and the deploy docs (DEPLOY_ALPHA.md \\Status: LIVE\\", NEXT_STEPS.md) still present the droplet retired 2026-06-25 as live infrastructure."}, {"finder": "khelsutra:issues-triage", "repo": "khelsutra (avidullu/khelsutra)", "summary": "TS/React SPA (web/) + marketing site (site/), ~140 merged PRs, CI green on master (last 5 runs success, ~1.5 min each). All 10 open issues triaged against current code: 6 are still fully valid feature/UX work (#72 #98 #99 #102 #111 #112), 2 are partially fixed but the issue text is now stale (#101 ? async compile #329 removed the 524 at source; #103 ? name-on-reload and fps/resolution landed via #127/#140), and 2 describe infrastructure that no longer exists (#97 #114 ? the D0 droplet alpha was retired 2026-06-25, alpha is paused pending the Cloud Run move). Separately, three repo docs (NEXT_STEPS.md refreshed 2026-07-01, deploy/DEPLOY_ALPHA.md, docs/LOCAL_APPLIANCE_ARCHITECTURE.md) still claim the retired droplet deployment is LIVE ? the most actionable doc-rot found. Overall debt is low-to-moderate: the codebase is disciplined and well-commented; the debt is concentrated in the processing-UX cluster (#98/#99/#111) and stale alpha-infra threads."}, {"finder": "sdc:audit", "repo": "sports-data-collector", "summary": "Small, healthy Python repo (~5.5k LOC in src/, ~250 test functions across 24 files) at Khelsutra/sports-data-collector, master = addcd206 (PR #53, busy_timeout). CI is green (last 8 runs all success, ~20s each) but is pytest-only: no ruff/mypy/coverage gate, and default ruff currently reports 24 err ... (truncated 310440 chars, full result in C:\\Users\\avidu\\AppData\\Local\\Temp\\claude\\C--Users-avidu-Projects-badminton-highlight-indexer\\c1fcb4aa-537d-41fd-858e-53f93349bf5a\\tasks\\wwi2c0w2d.output)</result><usage><agent_count>60</agent_count><subagent_tokens>3577707</subagent_tokens><tool_uses>1042</tool_uses><duration_ms>1650167</duration_ms></usage></task-notification>

17. assistant (2026-07-02T03:14:52.521Z)

The audit workflow finished ? 60 agents, ~1,042 tool calls. The result is large, so let me extract the verified findings from the output file.

1 [0] P1 M tech-debt | badminton-highlight-indexer | PR #390 (D1/P10 main.py split) is stale and CONFLICTING while main.py grew 52% since it was cut

2 file: backend/main.py:1 tracked_in: PR #390; docs/CODE_CLEANUP_AUDIT_2026-06-24.md

3 \$6 row P10 finder: engine:audit-doc-reconcile

3 fix: Close #390 and re-cut the orchestration.py extraction fresh from origin/master (small, ~1 session), or rebase it now. Then continue the split (CLI handlers -> backend/cli/, new /api/source/api/assets/api/capabilities routes -> backend/api/) before more endpoints accrete. Update the audit doc's sta

4 verify: Minor sharpenings only: (a) git log --since=2026-06-25 -- backend/main.py actually shows 10 commits (adds #387 repo-wide ruff format ? itself a likely source of #390's conflicts ? and #380), so ">=8 P

5 [1] P1 M critical-fix | badminton-highlight-indexer | /api/process re-runs the paid Gemini segmenter for an already-processed video (re-bill on refresh/'Try again') ? still unfixed at HEAD

6 file: backend/main.py:1172 tracked_in: Khelsutra/badminton-highlight-indexer#340 (also #330) finder: engine:correctness

7 fix: In _execute_processing, when db.get_video(video_id) exists with status='processed' and existing play_segments (and the request doesn't explicitly force reprocess), return the stored segments as the job result instead of dispatching the segmenter; add a `force` flag to ProcessRequest for deliberate r

8 verify: Severity P1 is honest: concrete failure scenario is a user-reachable one-click ("Try again" after the SPA's 10-min poll ceiling, live-triggered 2026-06-22 per #340) that silently re-bills a metered Ge

9 [2] P1 M critical-fix | badminton-highlight-indexer | /api/source re-downloads the ENTIRE remote video from the bucket on every HTTP request (each browser Range request) into a fresh, never-deleted temp dir

10 file: backend/main.py:646 tracked_in: - finder: engine:correctness

11 fix: Cache the fetched local copy keyed by video_id (e.g. under <output>/proxies or a per-video workspace source/ dir) and reuse it across requests; extend proxy warming to remote sources; delete or reuse the scratch dir instead of mkdtemp-per-request.

12 verify: Path correction: the storage citation is backend/storage/__init__.py:89-90 (not storage/__init__.py). Sharper failure scenario: store a 4 GB match via POST /api/assets with an s3://gs:// medium (P4, #

13 [3] P1 M tech-debt | badminton-highlight-indexer | Import cycles: extracted API modules reach back into backend.main globals at call time; config layer imports pipeline layer

14 file: backend/api/job_worker.py:75 tracked_in: docs/CODE_CLEANUP_AUDIT_2026-06-24.md P5 note + D1/P10 follow-up (line 221) finder: engine:structure

15 fix: Kill the shim as the concrete step-2 of D1: move db_instance/global_config onto app.state (create_app already exists per P5) and pass config/db explicitly to job_worker/uploads, then lift backend.main and backend.worker.__main__ out of mypy quarantine. For the layering inversion, move the segmenter-

16 verify: Mechanism correction to the evidence: job_worker's five call-time imports do NOT read db_instance/global_config ? job_worker already takes config/db as explicit params (job_worker.py:89,205,230,247; m

17 [4] P1 M tech-debt | badminton-highlight-indexer | Path-jail rejects gs://,s3://,gdrive-api:// before scheme resolution ? bucket ingest impossible on the exposed alpha box (issue #327 still open)

18 file: backend/main.py:1376 tracked_in: https://github.com/Khelsutra/badminton-highlight-indexer/issues/327 finder: engine:security-config

19 fix: Implement #327 option (b): jail only after resolve_input_ref, applying resolve_under_root exclusively to backend=='local' refs; keep traversal/symlink/absolute rejection for local paths and add both allow (bucket URI accepted) and reject (local traversal still 400) tests, updating tests/test_api_end

20 verify: Minor corrections: (1) startup check path is backend/config/startup.py:106-119, not startup.py (lines exact). (2) The "500 MB browser uploads" figure in why_it_matters comes from issue #327's body; th

21 [5] P1 S doc-rot | khelsutra (avidullu/khelsutra) | Docs claim the retired droplet alpha is LIVE (droplet deleted 2026-06-25)

22 file: NEXT_STEPS.md:12 tracked_in: partially in issue #97 (item 2: update DEPLOY_ALPHA.md); the NEXT_STEPS.md droplet claim is untracked finder: khelsutra:issues-triage

23 fix: One doc PR: mark DEPLOY_ALPHA.md status RETIRED/PAUSED with a pointer to the Cloud Run plan, fix NEXT_STEPS.md 'Where we are' (droplet gone, site is CF-Workers-only), and correct LOCAL_APPLIANCE_ARCHITECTURE.md:176. Also note the single-origin repoint that superseded the split topology (issue #97).

24 verify: Minor anchor correction: the 'Where we are (updated 2026-07-01)' header is
NEXT_STEPS.md;5; the droplet-live claim spans lines 12-13 (the finding's line 12 anchor is
correct for the URL text). Severit

25 [6] P1 M critical-fix | khelsutra (avidullu/khelsutra) | Issue #111 still fully valid:
refresh loses the in-flight job; progress static for minutes

26 file: web/src/hooks/useIngestJob.ts:117 tracked_in: khelsutra#111 finder:
khelsutra:issues-triage

27 fix: SPA half is Claude-doable now: persist the active job_id (?job=<id> +
localStorage) and on load resume polling to the existing ?video= handoff; add elapsed-
time/heartbeat copy. Engine half (granular 'segmenting chunk 3/7' from
backend/pipeline/segmenters/gemini.py via the job-progress hook) is a sma

28 verify: Failure scenario, sharpened from issue #111's field report: an ~8-min upload
spends ~5 min in Gemini segmentation with near-static "processing" text; the tester refreshes
(natural when nothing moves),

29 [7] P1 S tech-debt | khelsutra (avidullu/khelsutra) ? SPA web/ + marketing site/ |
Engine's vendored SPA bundle is 8 feature-PRs stale ? shipped appliance UI lacks the entire
storage/annotation wave

30 file: badminton-highlight-indexer/backend/ui/ui_version.json:3 tracked_in: -
finder: khelsutra:code

31 fix: Re-run badminton-highlight-indexer/scripts/bundle_ui.sh against
khelsutra@f9eea14 and commit the refreshed backend/ui/ (the script's own convention: 'Refresh
the snapshot by re-running this on an SPA release; commit the diff'). Then add a cheap staleness
signal: a CI/doctor check comparing ui_versio

32 verify: Minor corrections only: API_VERSION is at backend/main.py:407, not 408; and
web/ actually has 10 commits since the pin (the 8 cited feature/test PRs plus docs #139/#123).
Sharper failure scenario: a u

33 [8] P1 S doc-rot | khelsutra (avidullu/khelsutra) ? SPA web/ + marketing site/ |
DEPLOY_ALPHA.md claims 'Status: LIVE' on a droplet retired 2026-06-25; GPU_VM_SERVING.md sources
its secrets from that droplet

34 file: khelsutra/deploy/DEPLOY_ALPHA.md:3 tracked_in: khelsutra #97, #114
(topology); droplet retirement itself untracked in-repo finder: khelsutra:code

35 fix: One doc PR: flip DEPLOY_ALPHA.md status to RETIRED/HISTORICAL with a pointer to
the retirement date and to issues #97/#114; rewrite GPU_VM_SERVING.md prerequisites to source
the Gemini key/AUD/tunnel token from their canonical stores (Drive / CF dashboard) instead of
the dead droplet; delete or soft

36 verify: Two refinements. (a) "all impossible now" is slightly overstated: per
5ffb750's message the droplet's data was archived to gs://khelsutra-rally-
corpus/archive/droplet-claude-do-rally-test-20260625/, s

37 [9] P1 S hygiene | sports-data-collector | Stray nested clone sports-data-
collector/sports-data-collector/ pollutes tooling; safe to delete

38 file: sports-data-collector/sports-data-collector/: tracked_in: - finder:
sdc:audit

39 fix: Delete the entire nested directory (rm -rf sports-data-collector/sports-data-
collector/). Nothing in it is unique: HEAD is an ancestor of current master, tree is clean, no
stashes/branches. Root cause is almost certainly a `git clone` run with cwd already inside the
repo (~Jun 19); worth adding `spo

40 verify: Sharper failure scenario than the finder's: beyond the +15 phantom ruff
errors, both tests/ dirs share module basenames with no __init__.py, so bare `pytest` from repo
root fails at collection with im

41 [10] P2 M ci-infra | badminton-highlight-indexer | ci.yml/nightly.yml lane drift
predicted by #384 has now materialized (link-check missing from nightly, timeout divergence,
duplicated coverage floor)

42 file: .github/workflows/nightly.yml:12 tracked_in:
<https://github.com/khelsutra/badminton-highlight-indexer/issues/384> finder: engine:ci-tests

43 fix: Do the #384 refactor now: extract the shared offline guard lanes into
.github/workflows/_offline-guards.yml exposed via workflow_call with the coverage floor as an
input, and have both ci.yml and nightly.yml call it (add link-check to the shared set or
document why it is per-PR-only); fix the stale

44 verify: Two corrections. (a) The timeout "divergence" is congenital, not
materialized drift: `git merge-base --is-ancestor` shows 3a34c42 (#382, ci.yml timeouts 15/30)
landed BEFORE the nightly was created (9

45 [11] P2 S security | badminton-highlight-indexer | Default CORS allow_origins=['*'] lets
any website script the localhost appliance (paid Gemini runs + local data read)

46 file: backend/main.py:116 tracked_in: - finder: engine:security-config

47 fix: Change the default to same-origin/loopback (e.g. `[ ]` plus skipping the

middleware, or an explicit localhost dev-origin list) and keep RALLY_CORS_ALLOW_ORIGINS as the widening knob; add a startup exposure/appliance warning when the wildcard is active. Add a regression test that an evil-origin preflight

48 verify: Downgrade P1?P2: the failure scenario is real but the finding itself honestly notes Chromium Private Network Access mitigates it in Chrome/Edge (dominant browser share); residual exposure is mainly Fi

49 [12] P2 S doc-rot | badminton-highlight-indexer | BACKLOG.md lists three shipped items as open, including a red 'blocks something' ByteTrack entry

50 file: docs/BACKLOG.md:39 tracked_in: - finder: engine:audit-doc-reconcile

51 fix: Docs-only PR: flip the three entries to done with PR links (#386, #370, #380), matching the checked-off convention already used at BACKLOG.md:24. Can ride in the same reconcile PR as the DOC_STATUS/README fixes.

52 verify: Fix scoping correction: only the line-39 ByteTrack entry can be flipped fully to done (and its '<0.30.0 cap' sentence deleted ? the cap is already lifted in requirements.txt:18). Entries at lines 22 a

53 [13] P2 S doc-rot | badminton-highlight-indexer | DOC_STATUS register + docs/README index are ~15 PRs behind the cleanup-audit and decision-snapshot trackers

54 file: docs/DOC_STATUS.md:47 tracked_in: docs/CODE_CLEANUP_AUDIT_2026-06-24.md §8 DoD (unchecked 'docs/README.md updated' item) finder: engine:audit-doc-reconcile

55 fix: One docs-only reconcile PR: refresh DOC_STATUS.md:47 row (Phase 2 nearly done, remaining = P10 + P16+), add a DECISION_SNAPSHOT_REGRESSION row, fix docs/README.md:41-42 blurbs, and rewrite the NEXT_STEPS.md:6 'Where we are' paragraph to the post-06-21 state.

56 verify: Two refinements to the fix scope: (a) when rewriting NEXT_STEPS.md:6, preserve the owner NO-60 block (lines 8) added by #404 verbatim ? it is a locked owner decision, not rot; (b) DOC_STATUS.md:33 (CO

57 [14] P2 M test-gap | badminton-highlight-indexer | M4 quality-floor gate still missing ? the one unblocked item keeping the golden-fixtures track from DONE

58 file: docs/GOLDEN_REGRESSION_FIXTURES.md:156 tracked_in: docs/GOLDEN_REGRESSION_FIXTURES.md §7 M4; docs/BACKLOG.md:60 finder: engine:audit-doc-reconcile

59 fix: Implement M4 per the doc's own recipe: seed per-slug floors from the F1 already frozen in each fx_*/expected.json score (floor = current - tolerance), record a windowing fingerprint in eval_baselines/regression_baseline.json, keep CONTROL-only, add to the golden-crossos CI matrix.

60 verify: Two sharpenings. (a) Failure scenario, concrete: after a SERVED windowing retune the owner re-freezes real fixtures via '--refresh-snapshot --reason ...'; the characterization gate parse-compares again

61 [15] P2 L tech-debt | badminton-highlight-indexer | Decision-snapshot regression track: decisions locked 06-25, zero code shipped since; tracker P0 row also stale

62 file: docs/DECISION_SNAPSHOT_REGRESSION.md:66 tracked_in: docs/DECISION_SNAPSHOT_REGRESSION.md §7 (P1-P8) finder: engine:audit-doc-reconcile

63 fix: Start §7 P1+P2 (canonical decision-snapshot schema + factor pure build_stitch_plan() out of compiler.py) as the next Claude-doable engine work; flip the P0 row to ? #383 and status to IN PROGRESS in the same PR. Ideally land P1-P4 before re-cutting the main.py split.

64 verify: One factual correction to the evidence: P8 (line 73) is ? (blocked/owner-gated), not ? ? "P1-P8 all ?" should read "P1-P7 all ?, P8 ?". Substance unaffected: zero of nine tracker rows show any progress

65 [16] P2 M tech-debt | badminton-highlight-indexer | Fetched-input scratch copies are never reclaimed anywhere (process jobs, compile jobs, /api/assets, cloud_run marker reads) ? 'OS temp reclamation' premise is false on Windows

66 file: backend/storage/__init__.py:89 tracked_in: - finder: engine:correctness

67 fix: Wrap remote-input acquisition in a per-job scope that deletes the scratch dir in a finally (worker already owns the job lifecycle), or route scratch under output_base(cfg)/tmp with an age-based sweep at startup; make cloud_run._read_json use TemporaryDirectory.

68 verify: Two sharpenings. (a) get_source (main.py:646) cannot use a simple finally-delete: the FileResponse streams from the scratch file after the handler returns, so deletion there needs the age-based-sweep

69 [17] P2 S critical-fix | badminton-highlight-indexer | GDriveApiStorage.fetch_to_local buffers the entire file in RAM (get_media().execute()); put() deletes the old object before the new upload succeeds

70 file: backend/storage/gdrive_api.py:144 tracked_in: - finder: engine:correctness

71 fix: Stream downloads with googleapiclient.http.MediaIoBaseDownload in chunks; for put(), create the new file first (or upload to a temp name) and delete the old one only after success.

72 verify: File/line accurate (line 144 is the `get_media().execute()` call). Failure scenarios: (1) `fetch_to_local` on a multi-GB source/reel buffers the full file in RAM on a memory-limited Cloud Run box ? OOM ki

73 [18] P2 S critical-fix | badminton-highlight-indexer | `config.json` `output.output_dir` is silently clobbered by the CLI `--output-dir DEFAULT` on every server/CLI start ? the typed knob is dead, and the DB path moves with it

74 file: `backend/main.py:1992` tracked_in: - finder: engine:correctness

75 fix: Change `argparse` default to None and only override when `args.output_dir` is not None (falling back to the config value through `resolve_output_dir`).

76 verify: Path correction: the documented knob is at `backend/config/models.py:274-276`, not `backend/models.py` (which does not exist). Sharper failure scenario: user sets `output.output_dir: "D:/rally-data"` in con

77 [19] P2 S critical-fix | badminton-highlight-indexer | `upload_dir` default `'output/uploads'` is CWD-relative and never app-home-resolved ? packaged `--app` writes uploads into an arbitrary CWD (or 500s on an unwritable one) while DB/reels live under `RALLY_APP_HOME`

78 file: `backend/api/uploads.py:50` tracked_in: - finder: engine:correctness

79 fix: Resolve `upload_dir` through `resolve_output_dir()/app_path()` in `_upload_cfg` (relative ? app-home-rooted; absolute passes through), mirroring `output_dir`.

80 verify: Sharper failure scenario: on macOS the `.command` runs with Terminal's `CWD=$HOME`, and any ``indexer --app`` shell launch (advertised in `install.py:243`) uses the caller's CWD ? uploads land in e.g. `~/output`

81 [20] P2 M critical-fix | badminton-highlight-indexer | Cloud Run dispatch: a bucket-poll timeout abandons a still-running GPU execution ? no cancellation, so the L4 keeps billing and its late result is never ingested

82 file: `backend/compute/cloud_run.py:173` tracked_in: - finder: engine:correctness

83 fix: On `PolicyTimeout`, best-effort cancel the execution via the Jobs API (`executions.cancel` with the stored execution name) and log the execution id in the failure message; optionally check the done-marker once more before failing.

84 verify: Correction to the failure scenario: "the L4 keeps billing" is bounded, not open-ended ? the job is created with `--max-retries 0 --task-timeout 3600` (`deploy/cloudrun/README.md:33`), so the orphaned exec

85 [21] P2 M tech-debt | badminton-highlight-indexer | Stage-2 AI-handoff orchestration duplicated between the default segmenter (`yolo_hybrid`) and the trajectory family

86 file: `backend/pipeline/segmenters/trajectory_hybrid.py:390` tracked_in: - finder: engine:structure

87 fix: Extract a shared handoff helper (e.g. `backend/pipeline/segmenters/handoff.py: pad_window + process_candidate_window` + the executor fan-out) consumed by both `HybridYoloSegmenter` and `TrajectoryHybridSegmenter`; move `_fmt_ts` to `backend/utils`. Note the trajectory subclass family itself (`fusion/tracknet/w`

88 verify: Finding is accurate as filed. Two sharpeners: (1) a third verbatim `_fmt_ts` exists at `backend/eval/harness.py:94`, strengthening the move-to-backend/utils part of the fix; (2) the copies are near- but n

89 [22] P2 L tech-debt | badminton-highlight-indexer | Four more god modules over 800 lines; `database.py` is a 50-method monolith

90 file: `backend/infrastructure/database.py:25` tracked_in: mypy.ini comments reference the typed-config migration (D3) in `docs/CODE_CLEANUP_AUDIT_2026-06-24.md` finder: engine:structure

91 fix: After D1 lands, apply the same treatment to `database.py`: split by domain into repository modules (`videos/segments/jobs/annotations`) behind the existing Database facade so call sites don't churn. Treat `golden_fixtures/wasb_infer/rally_seg_eval` as opportunistic ? split only when next touched. Finish t

92 verify: Two small corrections. (a) The domain list says "annotations" ? `database.py` has no annotation methods; the actual extra domains are events (`add_event:579`), `costs/pricebook` (`902?1049`), and user models

93 [23] P2 S hygiene | badminton-highlight-indexer | 7 stale `scratch/*.py` files tracked in git, violating the repo's own scratch convention

94 file: `scratch/test_ai_segmenter.py:1` tracked_in: - finder: engine:structure

95 fix: `git rm --cached scratch/*.py` (7 files) so the directory matches the documented convention; anything still useful gets promoted to `scripts/` per the `CODE_MAP` rule.

96 verify: Minor corrections: 55 `scratch/*.py` on disk, so 48 (not ~20) are correctly untracked; `ruff extend-exclude` is at `ruff.toml:10`; `pytest` exclusion is via `pytest.ini:5` `testpaths=tests` rather than an explici

97 [24] P2 M test-gap | badminton-highlight-indexer | 17 obsreport-gated reporting tests never run in any CI lane (count grew from the remembered 12)

98 file: `tests/test_reporting_harvest.py:11` tracked_in: - finder: engine:ci-tests

99 fix: Give one CI lane read access to the private sports-obsreport repo (deploy key or fine-grained PAT as a repo secret) and install the reporting extra in the full-suite job so the 17 tests execute; alternatively add a contract-stub test that fails loudly when the obsreport API shape changes.

100 verify: Minor correction: "skip count growing unnoticed" is overstated ?

run_all_tests.py:44-52 prints an explicit "obsreport NOT installed ? reporting tests will SKIP" banner and pytest -q still shows the ag

101 [25] P2 S ci-infra | badminton-highlight-indexer | ruff and mypy are unpinned in CI and the dev extra ? a new upstream release can redden every PR and the nightly overnight

102 file: .github/workflows/ci.yml:30 tracked_in: - finder: engine:ci-tests

103 fix: Pin the tool versions in one place (e.g. ruff==0.15.* and mypy==2.1.* in the dev extra, and have CI install via .[dev] instead of bare pip installs) and bump deliberately in dedicated PRs; folds naturally into the #384 workflow_call extraction.

104 verify: Two refinements. (a) Line nit: the dev extra spans pyproject.toml:49-56 (ruff at :53, mypy at :54), not 50-54. (b) Fix scoping: 'have CI install via .[dev]' is wrong for the lint lane ? `pip install -

105 [26] P2 S hygiene | badminton-highlight-indexer | Misplaced type-ignore in gcs.py makes the mypy gate environment-dependent: fails locally with google-cloud installed, green in CI

106 file: backend/storage/gcs.py:31 tracked_in: - finder: engine:ci-tests

107 fix: Collapse the import to one line with the ignore attached ('from google.cloud import storage # type: ignore[attr-defined]') or move the comment to the from-line; then a green run is reproducible regardless of installed optional extras.

108 verify: Two sharpenings. (1) The failure is invocation-shape-dependent: a single-file run (`mypy backend/storage/gcs.py --config-file mypy.ini`) passes; the attr-defined error only surfaces under the full `my

109 [27] P2 S security | badminton-highlight-indexer | trackers git dependency pinned to a mutable tag (not a commit SHA) and duplicated in 5 files

110 file: requirements.txt:29 tracked_in: https://github.com/Khelsutra/badminton-highlight-indexer/issues/384 (single-sourcing aspect only) finder: engine:security-config

111 fix: Pin to the full commit SHA of the 2.5.0 tag (git installs accept `@<sha>`), and single-source the ref (e.g. a constraints file or env consumed by CI, Dockerfile, and bootstrap) ? folds naturally into the #384 CI single-sourcing work. Drop the git dep entirely once roboflow/trackers#474 (broken PyPI

112 verify: Sharper failure scenario: a compromise of roboflow/trackers (or a maintainer account) force-moves the 2.5.0 tag; pip performs no hash verification on git refs, so the very next PR CI run (ci.yml:132,

113 [28] P2 M tech-debt | badminton-highlight-indexer | No lockfile: runtime closure resolved fresh from floor-only pins on every CI run and image build

114 file: pyproject.toml:27 tracked_in: - finder: engine:security-config

115 fix: Add a compiled, hash-pinned lock (uv lock or pip-compile --generate-hashes) consumed by CI and deploy/cloudrun/Dockerfile, refreshed via a scheduled bump PR; keep pyproject floors as-is for library consumers.

116 verify: Fix correction: pip-compile --generate-hashes will fail as proposed ? pip's hash-required mode rejects the VCS-sourced `trackers @ git+...@2.5.0` dep, and torch/torchvision install from an out-of-band

117 [29] P2 S hygiene | badminton-highlight-indexer | scratch/ is gitignored as 'never meant to be committed' yet 7 scripts are still tracked

118 file: .gitignore:71 tracked_in: - finder: engine:security-config

119 fix: git rm --cached the 7 scratch/*.py files (promote any keeper to tools/ first); one-line follow-up in the cleanup audit doc.

120 verify: Finding is accurate as filed. Sharper failure scenario: a developer temporarily hardcodes GEMINI_API_KEY or a personal path into tracked

scratch/gemini_video_debugger.py mid-debug, `git status` shows

121 [30] P2 S critical-fix | khelsutra (avidullu/khelsutra) | Issue #101 fixed at source but open: raw non-JSON 5xx body still rendered verbatim

122 file: web/src/lib/errors.ts:33 tracked_in: khelsutra#101 finder: khelsutra:issues-triage

123 fix: Quick win: in classifyError, when status >= 500 and the body is not JSON (or starts with '<'), return the friendly networkError/timeout code instead of code 'engine' with the raw body. Then update/close #101 noting async compile removed the 524 at source. The 'probe for the finished reel on timeout'

124 verify: One correction to the proposed fix's scope: do NOT use "5xx and body is not JSON ? networkError". pollCompileJob deliberately throws synthetic 5xx ApiErrors with PLAIN-TEXT (non-JSON) bodies ? client.

125 [31] P2 S tech-debt | khelsutra (avidullu/khelsutra) | Issue #99 still valid: uploaded

filename never shown during upload/processing

126 file: web/src/components/IngestPanel.tsx:306 tracked_in: khelsutra#99 finder: khelsutra:issues-triage

127 fix: Quick win: surface upload.phase.filename in the uploading chip, and hold the submitted file/URI name in IngestPanel state to pin it in the 'working' status card until done/error. Pure SPA change + catalog strings (6 locales) + tests.

128 verify: Sharper failure scenario: operator submits match_court3.mp4 with compute=cloud (paid GPU, IngestPanel.tsx:171-190 cost-ack flow); the moment upload completes the UI collapses to a bare "Working?" chip

129 [32] P2 M tech-debt | khelsutra (avidullu/khelsutra) | Issue #98 still valid: demo rally grid keeps showing while the user's upload processes

130 file: web/src/App.tsx:75 tracked_in: khelsutra#98 finder: khelsutra:issues-triage

131 fix: Lift the ingest busy/phase signal from IngestPanel to App (callback or lifted hook) and swap the demo grid for a per-job 'your reel is processing' state that becomes the real picker on done. Minimal version (hide demo grid + show processing banner when busy) is S; the full acceptance in the issue is

132 verify: Finding is accurate as filed, including file/lines. Sharper failure scenario: during an in-flight job the IngestPanel does show a spinner chip (IngestPanel.tsx:301-359), so the user is not fully blind

133 [33] P2 M tech-debt | khelsutra (avidullu/khelsutra) | Issue #112 still valid: Share to WhatsApp sends text only, no Web Share API attempt

134 file: web/src/components/CompileResult.tsx:79 tracked_in: khelsutra#112 finder: khelsutra:issues-triage

135 fix: Implement the issue's plan: fetch the reel blob -> new File -> navigator.canShare({files}) ? navigator.share(...) : graceful fallback (download + 'attach it in WhatsApp' hint, keep wa.me). Contained to CompileResult + catalog strings + tests; main win is mobile one-tap video share.

136 verify: Failure scenario, concrete: alpha user compiles a reel on mobile, taps "Share to WhatsApp" (CompileResult.tsx:78-86) ? WhatsApp opens with pre-filled text and no video; user perceives Share as broken

137 [34] P2 S hygiene | khelsutra (avidullu/khelsutra) | Issue #97 stale-open: describes retired infrastructure; topology decision needs re-scoping to the Cloud Run alpha

138 file: deploy/DEPLOY_ALPHA.md:29 tracked_in: khelsutra#97 finder: khelsutra:issues-triage

139 fix: Re-scope or close-and-replace #97: the durable content is the decision 'single-origin is the default for SPA+Access' ? record it in the Cloud Run serving plan and DEPLOY_ALPHA.md, then close. The DNS/Access cleanup itself is Cloudflare-dashboard work.

140 verify: One scoping correction to the proposed fix: no "Cloud Run serving plan" doc exists in khelsutra (deploy/ holds only DEPLOY_ALPHA.md, GPU_VM_SERVING.md ? itself droplet-era "droplet kept as fallback" a

141 [35] P2 S doc-rot | khelsutra (avidullu/khelsutra) ? SPA web/ + marketing site/ | NEXT_STEPS.md was refreshed 2026-07-01 but still advertises the retired droplet host as 'live + browsable'

142 file: khelsutra/NEXT_STEPS.md:12 tracked_in: - finder: khelsutra:code

143 fix: Refresh NEXT_STEPS.md 'Where we are': drop the live-droplet claim, retire the 'Droplet ? production' queue item (or re-scope it to 'any future VM' ? site/scripts/provision-vm.sh is already provider-agnostic), and keep the SSH-key revocation as an explicit still-actionable item. Mark deploy/droplet/R

144 verify: Sharper failure scenario: NEXT_STEPS.md is the repo's designated ramp-up doc ("Refresh at each checkpoint") and was refreshed 2026-07-01, so a new session trusts it as current state ? it then browses/

145 [36] P2 S doc-rot | khelsutra (avidullu/khelsutra) ? SPA web/ + marketing site/ | All 15 engine line-number contract anchors in the SPA API client are stale, and will drift further when engine PR #390 (main.py split) merges

146 file: khelsutra/web/src/api/client.ts:87 tracked_in: engine PR #390 (the split that worsens it) finder: khelsutra:code

147 fix: Replace hard line numbers with stable route anchors ? e.g. 'backend/main.py @app.post("/api/process")' / 'backend/api/uploads.py @router.post("/api/upload/init")' ? in one mechanical pass over client.ts + types.ts. Do it after (or regardless of) #390 so the anchors survive the god-module split.

148 verify: Finding is slightly UNDERSTATED: counting the three anchors packed into types.ts:3 separately, it is 17 anchors, and the finder missed that the types.ts:2 anchor 'backend/infrastructure/database.py:12

149 [37] P2 M test-gap | khelsutra (avidullu/khelsutra) ? SPA web/ + marketing site/ | SPA e2e CUJ never runs in CI and the mock engine is hand-synced ? the mock-vs-real drift bug-class

already shipped once

150 file: khelsutra/.github/workflows/test.yml:31 tracked_in: e2e/mock-engine.mjs:5 ('later drive CI CUJ replays') finder: khelsutra:code

151 fix: Add a fourth CI job (mirroring the existing layout job's Playwright setup) that builds web/ and runs the e2e CUJ specs against mock-engine.mjs; separately add a thin contract check pinning the mock's response shapes to web/src/api/types.ts (or an engine-side snapshot of _video_summary/capabilities)

152 verify: Path correction: tracked_in/evidence path is web/e2e/mock-engine.mjs:5 (no repo-root e2e/ exists); the finding's file field (.github/workflows/test.yml:31) is correct. Fix scoping addendum: the CI job

153 [38] P2 S hygiene | sports-data-collector | Uncommitted .gitignore hunk (artifacts/) stale ~3 weeks and self-contradictory vs the ADR it cites

154 file: .gitignore:59 tracked_in: - finder: sdc:audit

155 fix: Either commit the hunk as a tiny PR with a pattern that actually matches the stated intent (e.g. 'artifacts/**' + '!artifacts/', '!artifacts/**/', '!artifacts/**/manifest.json'), or discard it if model artifact bundles will only ever live in the indexer repo (per ADR-008 / indexer CODE_MAP, artifact

156 verify: Sharper failure scenario: a future session in this shared checkout commits .gitignore (or an agent stages broadly) and the hunk lands unreviewed, encoding a self-contradictory policy citing an ADR unr

157 [39] P2 M ci-infra | sports-data-collector | CI is pytest-only: no ruff/mypy/coverage gate, and default ruff already fails with 24 errors

158 file: .github/workflows/ci.yml:21 tracked_in: - finder: sdc:audit

159 fix: One small PR: (1) fix the 24 ruff findings (20 auto-fixable via --fix), (2) add [tool.ruff] to pyproject.toml, (3) add 'ruff check .' and 'pytest --cov=src --cov-fail-under=<current%>' steps to ci.yml. Optionally add a 3.9 job since requires-python >=3.9 is claimed but only 3.11 is tested.

160 verify: Minor evidence corrections: the rule breakdown is 19x F401 + 2x F841 + 2x E402 + 1x F541 (finder said "~20x F401" ? close ? but "4x F841" is wrong, it is 2; the finder's own two examples are the compl

161 [40] P2 M critical-fix | sports-data-collector | Crawler silently ingests partial matches when a per-set CSV fetch fails (no retry, no flag)

162 file: src/crawlers/badminton_crawler.py:185 tracked_in: docs/NEXT_STEPS.md A1 (retry/backoff only; silent partial-set acceptance not explicitly tracked) finder: sdc:audit

163 fix: When any per-set fetch fails, either skip the whole match (mirroring the rollback-accounting path at :229-237) or record the video with a non-curated status + a summary_log flag so it is excluded from `curate export`. Retry/backoff convergence onto download_best_video is the parked A1 item; the sile

164 verify: Severity P2 is honest: concrete scenario ? transient GitHub throttle during a crawl fails set3.csv for one match; the crawler prints one scroll-by warning, ingests sets 1-2 as the match's full rally s

165 [41] P3 S doc-rot | badminton-highlight-indexer | deploy/digitalocean/ retired (ADR-013, droplet gone 2026-06-25) but still live-coupled: carries the trackers pin and an unverified 'rotate the key shared in chat' note

166 file: deploy/digitalocean/README.md:3 tracked_in: deploy/digitalocean/README.md:8 (self-noted 'optional later cleanup') finder: engine:security-config

167 fix: Move the three provider-agnostic scripts to deploy/common/ per the README's own suggestion, delete the DO-specific remainder, and have the owner confirm (or perform) the Gemini key rotation the README demands; also clears one copy of the trackers pin.

168 verify: Two corrections. (1) The 'rotation may never have happened' hypothesis is REFUTED by the repo itself: docs/NEXT_STEPS.md:149 and docs/UI_ALPHA_EXECUTION_PLAN.md:25 record the Gemini key rotation DONE

169 [42] P3 S hygiene | khelsutra (avidullu/khelsutra) | Issue #103 partially fixed and stale as written: name-on-reload + fps/resolution landed; size/duration remain

170 file: web/src/api/types.ts:35 tracked_in: khelsutra#103 finder: khelsutra:issues-triage

171 fix: Update the issue to strike the landed parts, then scope the remainder: engine exposes duration/size (metadata already probed at validation per the issue) on GET /api/videos or the job result; SPA renders a compact info panel from upload -> result. Cross-repo M.

172 verify: Downgrade P2?P3: the defect is stale tracker text; concrete failure is a contributor re-implementing the landed name-on-reload/fps-resolution work from the issue as written, or closing #103 wholesale

173

174 === OWNER-GATED ===

175 - P2 | badminton-highlight-indexer | P0-rename remainder: person/venue-attributable

```

video names still committed in code and baselines :: Defect verified in current tree:
backend/eval/rally_seg_eval.py:52-54 commits MULTICOURT_CLIPS = frozenset({"mahadevpura_2",
"GX010128", "Badminton_BXH_2", "Boxhill_Doubles"}) (venue-attributable), an
176 - P2 | khelsutra (avidullu/khelsutra) | Issue #114 stale-open: CF Access guest-login
debugging against a deployment that no longer exists :: Debt is real but the fix is an owner
tracker call on the owner-gated alpha/serving track. Verified: (1) gh issue view 114 ? OPEN,
createdAt == updatedAt == 2026-06-23T10:25:52Z, 0 comments; body is CF
177
178 === CRITIC ADDITIONS ===
179 - P1 M critical-fix | Golden-corpus registry rot: all 6 owned 'curated' videos point at
a deleted absolute path, and the 4.9GB source videos are single-copy with no documented backup |
sports-data-collector/data/sports_metadata.db:0
180 evidence: Query of the git-tracked registry: videos rows adarsh_avi_singles,
kushagra_singles, largetest_doubles, gbaaddy, testlarge_short, mahadevpura_singles (all
is_commercial=1, status=curated) have local_path='C:\Users\avidu\Projects\Annotation Setup\Coll
181 fix: Add a `curate verify` (or extend cleanup.py) that resolves every registered
local_path and flags dangling rows; re-point the 6 golden rows to the current 'khelsutra-
guru/Annotation Setup/Golden Labelled' location; store paths relative to a configurab
182 - P2 S ci-infra | sports-obsreport has no CI at all ? combined with the engine's skipped
reporting tests, zero reporting-stack code is gated anywhere | sports-obsreport/pyproject.toml:7
183 evidence: `ls sports-obsreport/.github/workflows` -> no such directory (every other
repo in the umbrella has workflows). The repo has 10 test suites (tests/test_customer_message.py
... test_spec.py) and a dev extra with pytest+pytest-cov, but nothing runs them
184 fix: Add a minimal .github/workflows/ci.yml to sports-obsreport: checkout, pip
install -e .[dev], pytest --cov on push/PR. This closes the library half of the reporting-stack
gap independently of the engine's obsreport-lane work.
185 - P3 S hygiene | Engine .git bloated to 281MB by ~229MB of dangling raw match-video
blobs; 6.5MB yolov8n.pt is permanently in pushed history and .gitignore has no guard against re-
staging raw videos | badminton-highlight-indexer/.gitignore:49
186 evidence: `git count-objects -vH`: 4716 loose objects, 266.33 MiB loose vs only 2.61
MiB in packs; du .git = 281M. Four loose blobs are raw MP4s (ftypisom headers): 22.4MB, 31.7MB,
84.5MB, 90.2MB ? all unreachable even via `git rev-list --all --reflog` (dangli
187 fix: Run `git gc --prune=now` in the local checkout to reclaim ~260MB, and add a
broad guard (e.g. `*.mp4` with explicit `!` exceptions for any tracked fixtures, or ignore the
video scratch dirs) to .gitignore. Optionally note yolov8n.pt in docs as accept
188 - P3 S tech-debt | obsreport dependency URL still points at the pre-transfer avidullu
org ? installs survive only via GitHub's transfer redirect | badminton-highlight-
indexer/pyproject.toml:68
189 evidence: pyproject.toml:68: "obsreport @ git+ssh://git@github.com/avidullu/sports-
obsreport.git@v0.1.3" (echoed in requirements.txt:35). The repo actually lives at
Khelsutra/sports-obsreport ? `gh repo view avidullu/sports-obsreport` resolves to nameWithOwner
190 fix: Update the dependency URL in pyproject.toml (and the requirements.txt comment)
to github.com/Khelsutra/sports-obsreport.git and pin the v0.1.3 commit SHA instead of the tag,
matching whatever convention the trackers-pin fix adopts.
191 - P3 S hygiene | 1.7GB of stale yt-dlp partial-download debris in data/videos and
placeholder junk rows in the committed corpus registry | sports-data-
collector/src/crawlers/badminton_crawler.py:231
192 evidence: data/videos contains _diag.mp4.part (354MB), _t.mp4.part (516MB),
_v.mp4.part (849MB) plus Frag*.part and .ytdl markers, all dated 2026-05-26 ? 1.7G total of dead
partial downloads (du -ch *.part *.ytdl). The crawler's failure cleanup (badminton_craw
193 fix: Delete the stale *.part/*.ytdl files; extend the crawler's failure cleanup (or
cleanup.py) to glob and remove yt-dlp fragment side files for the failed target; purge or
clearly mark the two 'watch?v=example' placeholder rows out of the committed regi
194
195 === DROPPED FROM VERIFICATION (unverified) ===
196 - P2 | sports-data-collector | Stale doc pointers after archive moves (cross-repo
DECISIONS.md path + 6 in-code CODE_HEALTH_PLAN references)
197 - P2 | sports-data-collector | curate.py is a 1531-line monolith (CLI + interactive
review + import/export/proxy/licensing)
198 - P2 | sports-data-collector | Golden-label store is a binary SQLite file tracked in git
? unmergeable across the owner's concurrent sessions
199 - P1 | rally-annotator (Khelsutra/rally-annotator; local checkout
C:/Users/avidu/Projects/khelsutra-guru/rally-annotator) | Content script runs a 3 Hz full-DOM
shadow-piercing scan on every page the user visits, even with the panel hidden
200 - P1 | rally-annotator (Khelsutra/rally-annotator; local checkout

```

C:/Users/avidu/Projects/khelsutra-guru/rally-annotator) | Locked decision LD-i8 (web language persisted + seeded from browser language) is documented as shipped but not implemented ? panel always boots in English and forgets the choice on reload

201 - P2 | rally-annotator (Khelsutra/rally-annotator; local checkout
C:/Users/avidu/Projects/khelsutra-guru/rally-annotator) | Issue #26 open and unaddressed: CSV carries zero provenance ? labels are unattributable to their source video except by filename

202 - P2 | rally-annotator (Khelsutra/rally-annotator; local checkout
C:/Users/avidu/Projects/khelsutra-guru/rally-annotator) | E2E never reloads a page: the two headline persistence behaviors (resume numbering from storage, locale persistence) have no end-to-end proof, and entrypoints/ are outside unit coverage

203 - P2 | rally-annotator (Khelsutra/rally-annotator; local checkout
C:/Users/avidu/Projects/khelsutra-guru/rally-annotator) | Issue #22 still fully pending: all six translation catalogs remain machine-draft ? the declared quality gate before any public launch

204 - P2 | rally-annotator (Khelsutra/rally-annotator; local checkout
C:/Users/avidu/Projects/khelsutra-guru/rally-annotator) | 'Annotation Setup' is the un-versioned annotation-data workspace (not a code duplicate) and its Roora pilot-review artifacts appear to exist nowhere else

205 - P1 | sports-obsreport | Collector pins obsreport as plain PyPI requirement while the name is unclaimed on PyPI (dependency-confusion window; install broken today)

206 - P2 | sports-obsreport | Engine (and both repos' comments) reference obsreport via the stale pre-transfer org URL avidullu/ instead of Khelsutra/

207 - P2 | sports-obsreport | sports-obsreport has zero CI ? tags/pushes are cut with no automated test or lint gate

208 - P2 | sports-obsreport | Engine-obsreport integration is never exercised in any CI ? the ~12 reporting tests only ever run on dev machines

209 - P1 | non-git dirs: "Annotation Setup" + "khelsutra-screencast" (workspace root
C:/Users/avidu/Projects/khelsutra-guru) | Roora vendor pilot record (paid deliverables + corrected golden labels + 3 videos) is a single unversioned local copy

210 - P2 | non-git dirs: "Annotation Setup" + "khelsutra-screencast" (workspace root
C:/Users/avidu/Projects/khelsutra-guru) | khelsutra-screencast: 8 ad-hoc QA scripts and doc-cited DoD evidence are unversioned; the 5 cited checkpoint screencasts are absent from the canonical dir

211 - P2 | non-git dirs: "Annotation Setup" + "khelsutra-screencast" (workspace root
C:/Users/avidu/Projects/khelsutra-guru) | DATA_IN_GCS.md \$5 gap table contradicts its own \$7: trajectories/labels marked 'not in bucket' though migrated 2026-06-22

212 - P2 | non-git dirs: "Annotation Setup" + "khelsutra-screencast" (workspace root
C:/Users/avidu/Projects/khelsutra-guru) | Stale-open #175: OneDrive golden-data sharing plan never executed and largely superseded by the GCS bucket

213 - P1 | khelsutra-guru workspace (cross-repo): badminton-highlight-indexer, khelsutra, sports-data-collector, rally-annotator, sports-obsreport | Vendored SPA bundle in engine is 10 web/ commits stale ? engine-served UI lacks the fps display its own API just shipped

214 - P1 | khelsutra-guru workspace (cross-repo): badminton-highlight-indexer, khelsutra, sports-data-collector, rally-annotator, sports-obsreport | Engine PR #390 (D1 main.py split) is now CONFLICTING against master and going staler

215 - P1 | khelsutra-guru workspace (cross-repo): badminton-highlight-indexer, khelsutra, sports-data-collector, rally-annotator, sports-obsreport | Engine CLAUDE.md 'Current state' is ~3 weeks false ? claims platform/owned-model work 'has not started'

216 - P1 | khelsutra-guru workspace (cross-repo): badminton-highlight-indexer, khelsutra, sports-data-collector, rally-annotator, sports-obsreport | DO droplet retired 2026-06-25 but runbooks in BOTH repos still say the deploy is LIVE on it

217 - P2 | khelsutra-guru workspace (cross-repo): badminton-highlight-indexer, khelsutra, sports-data-collector, rally-annotator, sports-obsreport | sports-obsreport has zero CI ? no .github directory at all despite shipping versioned releases

218 - P2 | khelsutra-guru workspace (cross-repo): badminton-highlight-indexer, khelsutra, sports-data-collector, rally-annotator, sports-obsreport | Lint/type gates exist only in the engine ? sports-data-collector CI is pytest-only, plus GH-Actions version drift across repos

219 - P2 | khelsutra-guru workspace (cross-repo): badminton-highlight-indexer, khelsutra, sports-data-collector, rally-annotator, sports-obsreport | sports-data-collector working tree is dirty: uncommitted .gitignore WIP + a full stale nested clone of itself

220 - P0 | badminton-highlight-indexer (Khelsutra) | #340/#330: /api/process still re-bills Gemini on re-submit of an already-processed video ? no idempotency short-circuit (live P0 cost bug)

221 - P1 | badminton-highlight-indexer (Khelsutra) | PR #390 (D1 main.py split, step 1) is CONFLICTING and stale ? master diverged 9 commits on main.py since it was cut

222 - P1 | badminton-highlight-indexer (Khelsutra) | #332: NSFW pre-flight gate still absent

? non-owner alpha users can route arbitrary video to Gemini (ToS/abuse + paid-garbage risk)

223 - P2 | badminton-highlight-indexer (Khelsutra) | #327: path-jail still blocks
gs://-style ingest in hosted mode ? validate_input_path runs before scheme resolution

224 - P2 | badminton-highlight-indexer (Khelsutra) | #388 premise is half-stale: the three
job-worker functions already live in backend/api/job_worker.py (since PR #234, 06-18) ?
remaining scope is shim removal + test patch-target migration

225 - P2 | badminton-highlight-indexer (Khelsutra) | #384: coverage floor 70 and offline
guard lanes still duplicated verbatim between ci.yml and nightly.yml

226 - P2 | badminton-highlight-indexer (Khelsutra) | #301: upload retention sweep tool
exists but nothing schedules it ? unbounded upload growth on any hosted deployment

227 - P2 | badminton-highlight-indexer (Khelsutra) | #349 (+#331 overlap): WASB streaming
decode still forced single-threaded ? L4 GPU ~80% idle; #331 additionally needs a refresh
(droplet baseline retired, its lever 3 already shipped)

228 - P2 | badminton-highlight-indexer (Khelsutra) | #328: per-video runlog/trace endpoint
still missing ? obsreport exists server-side but is not user-accessible

229 - P1 | Khelsutra/badminton-highlight-indexer | No timeout on any serving-path ffmpeg
subprocess ? one hung ffmpeg permanently wedges the single-worker job queue

230 - P1 | Khelsutra/badminton-highlight-indexer | MD5 segmentation reuse still
unimplemented ? every re-submit of a byte-identical video re-bills Gemini and re-pays the full
CPU pipeline

231 - P1 | Khelsutra/badminton-highlight-indexer | WASB streaming decode still single-
threaded (num_workers forced to 0), no NVDEC anywhere ? L4 GPU ~80% idle during detection

232 - P1 | Khelsutra/badminton-highlight-indexer | Upload retention sweep still manual ?
7-day privacy retention window unenforced without an operator (#301 open)

233 - P2 | Khelsutra/badminton-highlight-indexer | Remote-input scratch copies (rally-
input-*/rally-worker-*) are never reclaimed ? by-design temp leak outside all cleanup tooling

234

<summary>Dynamic workflow "Adversarially verify the unique high-severity findings dropped from round-1 verification" completed</summary>

<result>[{"claim":"Content script runs a 3 Hz full-DOM shadow-piercing scan on every page the user visits, even with the panel hidden","repo":"rally-annotator","verdict":{"verdict":"CONFIRMED","reasoning":"Every element of the claim reproduces in the current working tree (rally-annotator @ main 3d604bc, clean):\n\n(1) Runs on every page: web/entrypoints/content.ts:13 `matches: [\`<all_urls>\`]` (top frame only per line 16), and web/wxt.config.ts:13 `host\_permissions: [\`<all_urls>\`]`. content.ts:32-44 unconditionally calls `mountPanel(...)` then `panel.toggle()` ? the panel starts hidden (display:none) but stays mounted.\n\n(2) 3 Hz loop regardless of visibility: web/src/ui/panel.ts:376 `const clock = window.setInterval(render, 333);` starts at mount and is cleared only in `destroy()` (panel.ts:395), which is never called from production code ? only from web/test/panel.smoke.test.ts. `toggle()` (panel.ts:391-393) merely flips display:none; it does not pause the interval.\n\n(3) Each tick triggers a full-DOM shadow-piercing scan on video-less pages: render() calls `video.now()` (panel.ts:264) ? `active()` (web/src/video/directVideo.ts:55-58) ? `findActive()` ? `collectVideos(document, ...)` (directVideo.ts:37-39), which does `root.querySelectorAll(\`"video"\`)` plus `root.querySelectorAll(\`"*\")` with a per-element `chrome.dom.openOrClosedShadowRoot` call, recursing into every shadow root to depth 8 (directVideo.ts:25-32, 13-23). Crucially, when no video exists, `this.current` is set to null (directVideo.ts:40-43), so the cache NEVER fills and every 333 ms tick repeats the full scan. Each tick also rewrites the hidden panel's DOM (status.innerHTML, list.replaceChildren, panel.ts:265-281).\n\n(4) No fix landed: git log for content.ts/panel.ts/directVideo.ts shows only ad6ac9c (initial), 5ec1831 and 0a05ecf (i18n) ? no gating change. No visibilitychange/IntersectionObserver/MutationObserver/activeTab anywhere in web/ (grep: only hit is the setInterval itself).\n\n(5) Intent: `<all\_urls>` is deliberate (DESIGN.md LD-7: panel hidden by default, icon is the explicit `"annotate this page"` gesture) ? but LD-7 gates only the UI, not the scan loop, so the perf cost contradicts the design's own `"not intrusive"` rationale.", "corrected_severity": "P2", "corrected_effort": "S", "notes": "Sharper failure scenario: user installs the extension and opens ordinary video-less pages (Gmail/Docs/GitHub ? tens of thousands of DOM nodes, many shadow roots). In every such tab, every 333 ms, forever, the content script walks the entire DOM (`querySelectorAll(\`"*\")`) and makes one chrome.dom.openOrClosedShadowRoot call per element ? continuous per-tab CPU burn and laptop battery drain, plus jank on heavy pages, with the panel never once opened. Cost scales with number of open tabs. On pages WITH a video the cache (directVideo.ts:55-57) makes ticks cheap, so the pathological case is precisely the `"every other page"` case the finder described.\n\nSeverity P2 not P1: no correctness/data-loss/security impact, and the extension is version 0.1.0/private (not store-published), so blast radius today is dev machines; would be P1 if shipped broadly.\n\nCorrectly-scoped fix (S): (a) don't start the 333 ms clock until the panel is first shown and pause/clear it when hidden ? gate it inside `toggle()` in panel.ts; (b) make render's clock read non-scanning (e.g. a `peekNow()` on DirectVideoHandler that uses only the cached element), keeping the full scan for explicit triggers (Refresh button, panel open). Optional follow-up (M, separate decision): replace the `<all\_urls>` content script with activeTab + scripting.executeScript on icon click, which eliminates injection on every page entirely and drops the broad host permission ? aligns with LD-7's own rationale, worth raising but not required to fix the perf debt. Not OWNER_GATED ? pure code change, no spend or product pivot."}}, {"claim":"Locked decision LD-i8 (web language persisted + seeded from browser language) is documented as shipped but not implemented ? panel always boots in English and forgets the choice on reload","repo":"rally-annotator","verdict":{"verdict":"CONFIRMED","reasoning":"Doc claims shipped: rally-annotator/docs/LOCALIZATION.md:55-57 (LD-i8: `\"Web: persisted in chrome.storage.local (seeded from the browser language; default en)\")` and :99-100 mark the web i18n phases done (PR #18 `\"selector\"`, PR #19); web/README.md:22-23 says `\"persisted in-panel language selector\"`. Code says otherwise: (1) web/src/i18n/index.ts:56 boots the module-level locale to DEFAULT_LOCALE (`\"en\"`) ? a fresh content-script injection always starts English; (2) negotiateLocale (index.ts:72-80), which implements the stored?navigator.languages?en order, has ZERO runtime callers ? grep across web/ shows its only callers are unit tests (web/test/i18n.test.ts:47-52); (3) panel.ts:18 declares onLocaleChange with the comment `\"optional: persist the choice (content script wires this)`, but the actual mountPanel call in web/entrypoints/content.ts:32-42 passes only annotator/video/identity/download ? onLocaleChange is never wired, so the change handler at panel.ts:306-311 updates only the in-memory `current`; (4) no storage read/write of any language key exists anywhere: persist/store.ts handles only `\"rally:\`-prefixed rows, background.ts (all 27 lines) handles only downloads and icon clicks. Git: repo is at origin/main (3d604bc); no commit after 0a05ecf (#19) touches web locale persistence ? 3d604bc (`\"docs: sync READMEs, multi-agent audit fixes\")` actually re-affirmed the false `\"persisted\"` README claim. The E2E (web/e2e/extension.spec.ts:80-101) switches the locale within one page session and never

reloads, so it can't catch this. Failure scenario: a Hindi rater (browser hi-IN) opens a video ? panel boots in English despite the \"seeded from browser language\" claim; they select ?????; on the next page load/navigation the panel is English again and the choice must be re-made on every video.\" , \"corrected_severity\": \"P2\", \"corrected_effort\": \"S\", \"notes\": \"Claim verified exactly as stated; not OWNER_GATED (LD-i8 is already the locked decision ? this is pure implementation). Sharper framing: both halves of LD-i8-web are missing (no boot-time seeding AND no persistence), yet all plumbing already exists and is tested, which is why the fix is S: in content.ts main(), read e.g. `lang` from browser.storage.local, call setLocale(negotiateLocale(stored, navigator.languages)) before mountPanel, and pass onLocaleChange: (l) => void browser.storage.local.set({ lang: l }); add a unit test for the wiring and extend the Playwright E2E with a reload-persists-locale assertion (the current per-locale E2E never reloads, which is the coverage gap that let the docs drift). Scope note: the VLC half of LD-i8 (config-file persistence, PRs #20/#21) was not part of this claim and was not verified either way. Severity P2: no data loss/crash, but a locked decision is documented and README-advertised as shipped while absent ? it defeats the localization value prop for the target hi/kn/te raters (English boot every page load) and the doc-sync commit 3d604bc propagated the false claim.\" }}, { \"claim\": \"Collector pins obsreport as a plain PyPI requirement while the name is unclaimed on PyPI ? dependency-confusion window and install broken today\", \"repo\": \"sports-data-collector\", \"verdict\": { \"verdict\": \"CONFIRMED\", \"reasoning\": \"(1) Bare PyPI-style pin exists in current tree: C:/Users/avidu/Projects/khelsutra-guru/sports-data-collector/pyproject.toml:38-40 ? `report = [\"obsreport\";=0.1.3\"]`, with the comment at lines 32-37 itself admitting the intended form is a git+ssh direct reference. (2) Name is unclaimed on PyPI today (2026-07-02): https://pypi.org/pypi/obsreport/json returns 404, and `pip index versions obsreport` returns `ERROR: No matching distribution found for obsreport` (personally observed). (3) The private package really is named `obsreport` (sports-obsreport/pyp ... (truncated 22749 chars, full result in C:\\Users\\avidu\\AppData\\Local\\Temp\\claude\\C--Users-avidu-Projects-badminton-highlight-indexer\\c1fcb4aa-537d-41fd-858e-53f93349bf5a\\tasks\\wdd3ho54o.output)</result> <usage><agent_count>8</agent_count><subagent_tokens>512823</subagent_tokens><tool_uses>165</tool_uses><duration_ms>401681</duration_ms></usage> </task-notification>

25. user (2026-07-02T03:23:50.582Z)

=== CONFIRMED [P2/S] rally-annotator | Content script runs a 3 Hz full-DOM shadow-piercing scan on every page the user visits, even with th
 REASONING: Every element of the claim reproduces in the current working tree (rally-annotator @ main 3d604bc, clean):

(1) Runs on every page: web/entrypoints/content.ts:13 `matches: [\"<all\_urls>\"]` (top frame only per line 16), and web/wxt.config.ts:13 `host\_permissions: [\"<all\_urls>\"]`. content.ts:32-44 unconditionally calls `mountPanel(...)` then `panel.toggle()` ? the panel starts hidden (display:none) but stays mounted.

(2) 3 Hz loop regardless of visibility: web/src/ui/panel.ts:376 `const clock = window.setInterval(render, 333);` starts at mount and is cleared only in `destroy()` (panel.ts:395), w

NOTES: Sharper failure scenario: user installs the extension and opens ordinary video-less pages (Gmail/Docs/GitHub ? tens of thousands of DOM nodes, many shadow roots). In every such tab, every 333 ms, forever, the content script walks the entire DOM (`querySelectorAll(\"\*\")`) and makes one chrome.dom.openOrClosedShadowRoot call per element ? continuous per-tab CPU burn and laptop battery drain, plus jank on heavy pages, with the panel never once opened. Cost scales with number of open tabs. On pages WITH a video the cache (directVideo.ts:55-57) makes ticks cheap, so the pathological case is precise

=== CONFIRMED [P2/S] rally-annotator | Locked decision LD-i8 (web language persisted + seeded from browser language) is documented as shipp

REASONING: Doc claims shipped: rally-annotator/docs/LOCALIZATION.md:55-57 (LD-i8: \"Web: persisted in chrome.storage.local (seeded from the browser language; default en)\") and :99-100 mark the web i18n phases done (PR #18 \"selector\", PR #19); web/README.md:22-23 says \"persisted in-panel language selector\". Code says otherwise: (1) web/src/i18n/index.ts:56 boots the module-level locale to DEFAULT_LOCALE (\"en\") ? a fresh content-script injection always starts English; (2) negotiateLocale (index.ts:72-80), which implements the stored?navigator.languages?en order, has ZERO runtime callers ? grep across web/ s

NOTES: Claim verified exactly as stated; not OWNER_GATED (LD-i8 is already the locked decision

? this is pure implementation). Sharper framing: both halves of LD-i8-web are missing (no boot-time seeding AND no persistence), yet all plumbing already exists and is tested, which is why the fix is S: in content.ts main(), read e.g. `lang` from browser.storage.local, call setLocale(negotiateLocale(stored, navigator.languages)) before mountPanel, and pass onLocaleChange: (l) => void browser.storage.local.set({ lang: l }); add a unit test for the wiring and extend the Playwright E2E with a reload-persists-l

=== CONFIRMED [P2/S] sports-data-collector | Collector pins obsreport as a plain PyPI requirement while the name is unclaimed on PyPI ? dependenc

REASONING: (1) Bare PyPI-style pin exists in current tree: C:/Users/avidu/Projects/khelsutra-guru/sports-data-collector/pyproject.toml:38-40 ? `report = ["obsreport>=0.1.3"]`, with the comment at lines 32-37 itself admitting the intended form is a git+ssh direct reference. (2) Name is unclaimed on PyPI today (2026-07-02): <https://pypi.org/pypi/obsreport/json> returns 404, and `pip index versions obsreport` returns "ERROR: No matching distribution found for obsreport" (personally observed). (3) The private package really is named `obsreport` (sports-obsreport/pyproject.toml:6, version 0.1.3, tag v0.1.3 exi

NOTES: Severity calibrated down from an implied P1: the exposure is real but narrow. `report` is an optional extra; the base install is unaffected; the collector treats obsreport as a soft dependency that no-ops when absent (sports-data-collector/src/reporting/__init__.py:15-22); and CI installs only `[dev]` (.github/workflows CI line 19), so no automated pipeline ever resolves the bare name ? the confusion window only fires when a human/agent runs `pip install .[report]` in a fresh env (in the documented sibling-editable workflow, pip sees obsreport 0.1.3 already satisfied and never queries PyPI).

=== CONFIRMED [P2/S] badminton-highlight-indexer | No timeout on any serving-path ffmpeg subprocess ? one hung ffmpeg permanently wedges the single-wor

REASONING: Single-worker executor: backend/api/job_worker.py:47-49 (max_workers=1) with the in-code "O2 RISK" admission at :32-39 that one hung job blocks all subsequent jobs and "the executor itself cannot enforce timeouts on the Thread". Serving-path ffmpeg/ffprobe calls with NO timeout=: (compile job, POST /api/compile main.py:1594 -> _execute_compile -> compiler.compile_highlights at main.py:1686, no wrapper) backend/pipeline/stitcher/compiler.py:130 (ffprobe), :321 (per-clip libx264 encode), :494 (concat); (process job, _execute_processing main.py:1132) validators backend/pipeline/validators/format.

NOTES: Claim is literally true, but "permanently wedges" should be "wedges until server restart, and the restart sweep (fail_stale_jobs) then fails every queued job". Sharper failure scenario: POST /api/compile for a video whose stored local filepath sits on a network-backed mount (Google Drive streaming / SMB) ? storage.acquire_local_input is identity for local paths (main.py:1683) ? the mount stalls mid-read (or the MP4 is truncated/corrupt and ffmpeg's demuxer loops); subprocess.run at compiler.py:321 blocks forever; the compile job stays 'running'; every subsequent /api/process and /api/compile r

=== CONFIRMED [P1/S] badminton-highlight-indexer | Engine CLAUDE.md 'Current state' section is ~3 weeks false ? claims platform/owned-model work 'has n

REASONING: Personally reproduced against the working tree and git history. (1) C:\Users\avidu\Projects\khelsutra-guru\badminton-highlight-indexer\CLAUDE.md:30-31 states "***No platform/owned-model implementation has started***"; lines 34-37 say the "committed next PLATFORM slice = async job model" and the owned-model track "starts at a greenlit Phase-0 milestone... Do not start implementation without explicit owner approval"; lines 41-42 call `StorageBackend` + `ComputeBackend` registries "Future:". git blame shows lines 30-37 were last written 2026-06-10 (commit 62fb2fb) and never touched since, despit

NOTES: Sharper failure scenario: CLAUDE.md is auto-loaded project memory for every fresh agent session in this heavily agent-driven repo. A fresh session reads "No platform/owned-model implementation has started" + "Do not start implementation without explicit owner approval" and will (a) tell the owner the async job model is an un-started, gated future slice and propose designing/implementing what already exists (backend/api/job_worker.py), (b) treat StorageBackend/ComputeBackend as "Future" and re-design duplicates of backend/storage/ and backend/compute/, (c) misreport project status upward (e.g.,

=== CONFIRMED [P1/M] sports-data-collector | Golden-corpus registry rot: all 6 owned 'curated' videos point at a deleted absolute local_path and

REASONING: Registry rot half CONFIRMED by direct observation. sports-data-collector/data/sports_metadata.db (git-tracked; rows landed in commit 9e6f204 "#19 ingest the n=6 owned golden corpus", DB last touched 9f1e792 with no path fix since): videos table has 8 status='curated' rows; the 6 owned ones (adarsh_avi_singles, kushagra_singles,

targetest_doubles, gbaaddy, testlarge_short, mahadevpura_singles; license_type=Proprietary, is_commercial=1) all carry local_path under 'C:\Users\avidu\Projects\Annotation Setup\Collect\Golden Labelled*.MP4' ? that directory does not exist. The folder moved to 'C:\User

NOTES: Corrections to the round-1 claim: (1) Size is ~37.9 GB, not 4.9 GB ? per-clip sizes annotated in scratch/copy_videos_to_gcs.ps1:31-36 (10.9+7.7+11+6.7+1.4+0.19 GB); the ~4.9-5.2 GB figure matches the three unrelated Roora pilot videos under 'Annotation Setup/Archive/.../Annotation Videos/'. (2) "No documented backup" is false ? badminton-highlight-indexer/docs/DATA_IN_GCS.md §5/§6/§8 explicitly documents the F: archive location and a Phase-2 migration plan (tracker at doc line 246: 14/15 videos still unmigrated); but "single-copy" stands: exactly one copy of the six source videos exists, on an

=== CONFIRMED [P2/S] non-git | Roora vendor pilot record (paid deliverables + corrected golden labels + 3 videos) is a single unver

REASONING: CONFIRMED for the paid deliverables + corrected golden labels; the "3 videos" component of the claim is REFUTED (Drive copies exist). Evidence: (1) Single-copy artifacts verified on disk: raw paid CVAT deliverables at 'C:/Users/avidu/Projects/khelsutra-guru/Annotation Setup/Archive/Roora Pilot Review - 6 June 2026/' ? badminton/{badminton, badminton (1), badminton (2)}/Annotations/*.xml (~2.3 MB per-frame boxes), pickleball/*.zip (3 zips, 260 KB), tabletennis/*.zip (3 zips, 213 KB) ? plus the human-corrected golden labels 'Annotation Setup/golden_labels_badminton.csv' (2.5 KB, mtime 2026-06-06

NOTES: Correction to the finding: the at-risk payload is NOT the 4.9 GB folder ? the videos are safe on the owner's Google Drive. What is genuinely one C:-disk failure (or one folder-cleanup) from loss is ~3 MB of paid, partly irreplaceable work product: the raw vendor CVAT exports for all 3 sports (box geometry the tracked canonical CSVs discard), the human frame-by-frame correction record (golden_labels_badminton.csv + rally_review.csv ? hours of review labor and the calibration evidence behind the vendor feedback), the pickleball/tabletennis golden CSVs backing the recorded TT-0.909/PB-0.308 multi

=== CONFIRMED [P1/S] badminton-highlight-indexer | Upload retention sweep tool exists but nothing schedules it ? unbounded upload growth + unenforced 7

REASONING: Tool exists: badminton-highlight-indexer/tools/cleanup_caches.py (T11 retention sweep, --uploads-retention-days default 7.0 at ~line 407; classify() purges uploaded videos + .partial-* in the uploads zone; landed cb7394b/#299). Nothing schedules it: workspace-wide grep for cleanup_caches hits only the tool/tests/docs and an error string (backend/pipeline/detectors/base.py:162); zero references in .github/workflows/nightly.yml, deploy/cloudrun/, deploy/digitalocean/, scripts/, and zero cron/timer/sweep references in khelsutra/deploy/droplet/ (khelsutra-engine.service has no companion timer). Ba

NOTES: Sharper failure scenario: the alpha droplet is live and accepting uploads behind Cloudflare Access; without any scheduled `python -m tools.cleanup\_caches --apply`, a tester's footage uploaded day 0 is still on disk day 30+ (unenforced 7-day privacy retention, an explicit owner policy per the tool docstring, 2026-06-21), and output/uploads grows unboundedly until require_free_bytes (backend/api/uploads.py:93) starts rejecting new uploads (service degradation on the small CPU droplet). Mitigations that keep this P1 not P0: runbook notes testers had not yet exercised the upload CUJ (OTP login + G Shell cwd was reset to C:\Users\avidu\Projects\badminton-highlight-indexer

gitignored), with the Gen-2 split pre-committed to a NEW repo (sports-temporal-models) ? never
sports-data-collector, whose ADR-008 role is the data feed (curate export ? data/eval_export*/,
already ignored). PR #54 therefore adds NO ignore pattern: it appends a 14-line comment block to
.gitignore (matching the file's existing commented-section style) recording the decision, why
the stale hunk's blanket 'artifacts/' was wrong (it would hide the manifest.json its own comment
declared reviewable; it cited an ADR unresolvable in-repo), and the correct un-ignore recipe
(artifacts/** + !artifacts/**/ + !artifacts/**/manifest.json) if bundles ever land here.
Authored fresh from origin/master in an isolated worktree; commit ab6f68b is the only commit on
origin/master..HEAD.", "author_notes":"1) The main checkout (C:/Users/avidu/Projects/khelsutra-
guru/sports-data-collector) STILL carries the stale WIP .gitignore hunk (' M .gitignore' on
master) ? deliberately left untouched per the brief; the orchestrator should discard it (git
checkout -- .gitignore) after merging PR #54, as noted in the PR body. 2) sports-data-collector
has no CLAUDE.md (checked; only README + docs/), so no repo-local conventions beyond commit-
history style (conventional commits, which I matched with docs(gitignore): ...). 3) A sibling
worktree wt-curate-verify (branch fix/curate-verify-registry-rot) exists on the same scratchpad
from another task ? untouched by me. 4) Related latent issue NOT in my scope: the indexer repo
has the same contradiction (its .gitignore:53 ignores artifacts/ wholesale while
docs/CODE_MAP.md:35 says 'manifest committed'; git ls-files artifacts/ is empty) ? the verifier
notes flag it; a separate fix there would make ADR-008's provenance surface real. 5) Worktree
preserved as instructed; PR not
merged.", "review_verdict":"clean", "review_findings":[], "folded":null}, {"item":"sdc-curate-
verify","pr":55,"branch":"fix/curate-verify-registry-
rot","worktree":"C:/Users/avidu/AppData/Local/Temp/claude/C--Users-avidu-Projects-badminton-
highlight-indexer/c1fcb4aa-537d-41fd-858e-53f93349bf5a/scratchpad/wt-curate-
verify","summary":"Fixes R2-6 + critic #1 in Khelsutra/sports-data-collector (PR #55). (1) New
`curate verify` subcommand (src/cli/curate.py): resolves every registered videos.local_path,
reports dangling rows in a tabulated report, --strict exits 1, --sport/--status filters;
structured VerifyReport core for library/test use; README §7 documents it. (2) Re-pointed 2 of
the 6 owned golden rows to disk-verified locations: adarsh_avi_singles -&gt; 'G:\\My
Drive\\Sharing\\Badminton\\Boxhill\\June 1 2026\\Adarsh and Avi.MP4' (ffprobe 1080p@59.94,
duration 1409.4s vs last label 1405.8s) and mahadevpura_singles -&gt; 'G:\\My
Drive\\Sharing\\Golden Annotations\\MahadevpuraSingles.MP4' (1080p@29.97, 447.7s vs last label
399.4s; size matches documented 187MB). The other 4 (kushagra_singles, largetest_doubles,
gbaaddy, testlarge_short) exist ONLY on the unmounted F: archive ? left dangling deliberately
and flagged in the PR body. (3) Committed the rewritten binary sqlite data/sports_metadata.db:
purged the staging_match_non_comm demo placeholder row (recreatable from committed sample CSV),
cleared shuttlestet_12's fake 'watch?v=example' URL to NULL (kept its 79 real rallies), VACUUMed;
31 -&gt; 30 rows. 9 new tests in tests/test_verify.py.", "author_notes":"Deviations/judgment
calls: (a) Brief said check C: then F:; F: is NOT mounted (Get-PSDrive: only C:, G:, Temp), and
'khelsutra-guru/Annotation Setup/Golden Labelled' holds only the .rallies.csv labels ? but a
recursive filename search found verified copies of 2 of the 6 on G: (Google Drive File Stream),
which I ffprobe-matched against DB fps/resolution and golden-label durations before re-pointing.
No persisted MD5s of the originals exist anywhere, so identity rests on
filename+fps+resolution+label-span consistency (all exact); noted in the PR body. These are
Drive-stream paths ? content downloads on demand; export md5 of the 10.7GiB file will be slow.
(b) 4 rows remain dangling (F:-only per DATA_IN_GCS.md §5/§6) ? flagged in PR body; when F: is
mounted: verify, hash, re-point (and consider the §6 Phase-2 GCS migration). (c) shuttlestet_12
was 'marked' (fake URL -&gt; NULL) not purged ? it carries 79 real ShuttleSet annotations;
staging_match_non_comm was purged (pure demo fixture). (d) Pre-existing my_custom_local_match
row is also dangling (README demo row) ? left as-is, out of scope. (e) The untracked
data/eval_export/manifest.json in the MAIN checkout still holds dead paths ? re-run `curate
export` after merge. (f) Main checkout's dirty .gitignore (sibling WIP) untouched; all work done
in the isolated worktree; branch cut from origin/master; origin/master..HEAD contains only my

commit. Worktree left in place as
instructed.", "review_verdict": "n/a", "review_findings": [], "folded": null}, {"item": "sdc-roora-
archive", "pr": 56, "branch": "chore/roora-golden-
labels", "worktree": "C:/Users/avidu/AppData/Local/Temp/claude/C--Users-avidu-Projects-badminton-
highlight-indexer/c1fcb4aa-537d-41fd-858e-53f93349bf5a/scratchpad/wt-roora-
goldens", "summary": "R2-7 fixed in two halves. (A) GCS archive: uploaded the Roora pilot record
to gs://khelsutra-rally-corpus/archive/roora-pilot-review-20260606/ ? 739 objects, 5,731,641
bytes, verified byte-for-byte (remote ls -r listing diffed identical to local staging; du -s
matches exactly). Contents mirror the 'Annotation Setup/' relative layout: Archive/'Roora Pilot
Review - 6 June 2026' / minus Annotation Videos/ (5,626,913 B: 711 badminton CVAT frame XMLs +
instances_Test.json + annotations.xml, 3 pickleball zips, 3 tabletennis zips, review MD/PDFs,
annotation brief + illustrated guide, Feedback/), Trajectories/roora/ (100,843 B incl. pb/tt
goldens + parse reports), golden_labels_badminton.csv (2,508 B), rally_review.csv (1,377 B,
found at 'Annotation Setup/rally_review.csv'). No videos uploaded (Drive copies exist per
audit). gcloud account verified = avi.dullu@gmail.com. (B) PR #56 on Khelsutra/sports-data-
collector: new data/golden_labels/ with verbatim copies of golden_labels_badminton.csv +
pickleball_rallies.csv + tabletennis_rallies.csv (the TT-0.909/PB-0.308 backing goldens), a
provenance README pointing at the GCS archive URI, and tests/test_golden_labels_data.py pinning
that pb/tt load via load_canonical_csv with zero skipped rows and the badminton human
corrections (rally 2 start 29.000, rally 7 end 98.000, missed rallies 7.5/16.5) stay intact.
Repo convention honored: no CLAUDE.md/CODE_MAP exists in sdc; .gitignore documents that small
source annotation CSVs are version-controlled under data/ (precedent:
data/roora_badminton_canonical.csv, data/validation/).", "author_notes": "Deviations/for the
merger: (1) Total upload is ~5.7 MB, not the brief's ~3 MB estimate ? still entirely
label/annotation/review artifacts; the delta is the 711 per-frame CVAT XMLs + review PDFs. Zero
videos uploaded (the 3 pilot videos have byte-identical Drive copies per the audit verifier).
(2) Upload incident worth knowing: the first recursive gcloud cp silently dropped 4 files (both
root PDFs, the P&T review MD, the P&T feedback PDF) because their staged paths in the
deep scratchpad exceeded Windows MAX_PATH=260 ? gcloud reported nothing in the tail output.
Detected via local-vs-remote list diff, fixed

41. assistant (2026-07-02T04:59:05.773Z)

You've hit your session limit · resets 1:10pm (Asia/Calcutta)

42. user (2026-07-02T15:45:09.345Z)

can you run a thorough analysis on whether the audit_report of khelsutra-guru of 0702 is completely done? Ground your findings in the code and ensure the fixes are legitimate.

43. assistant (2026-07-02T15:45:51.315Z)

The build workflow hit the session limit partway through ? only the 3 sports-data-collector PRs got authored, and two of those (#55, #56) never got their adversarial review. So the answer to "is it completely done" is clearly ****no****, but you deserve a precise, code-grounded accounting of exactly what landed, what didn't, and whether the fixes that ***did*** land are legitimate. Let me gather the real state.

44. user (2026-07-02T15:46:01.089Z)

=== sdc-gitignore | PR #54 | branch docs/gitignore-artifact-bundles-decision
  review_verdict: clean  findings: 0
  tests_run/notes tail: 1) The main checkout (C:/Users/avidu/Projects/khelsutra-guru/sports-
data-collector) STILL carries the stale WIP .gitignore hunk (' M .gitignore' on master) ?
deliberately left untouched per the brief; the orchestrator should discard it (git checkout --
.gitignore) after merging PR #54, as noted in t

=== sdc-curate-verify | PR #55 | branch fix/curate-verify-registry-rot
  review_verdict: n/a  findings: 0
  tests_run/notes tail: Deviations/judgment calls: (a) Brief said check C: then F;; F: is NOT
mounted (Get-PSDrive: only C:, G:, Temp), and 'khelsutra-guru/Annotation Setup/Golden Labelled'
holds only the .rallies.csv labels ? but a recursive filename search found verified copies of 2
of the 6 on G: (Google Drive File Stre

=== sdc-roora-archive | PR #56 | branch chore/roora-golden-labels
  review_verdict: n/a  findings: 0
  tests_run/notes tail: Deviations/for the merger: (1) Total upload is ~5.7 MB, not the brief's
~3 MB estimate ? still entirely label/annotation/review artifacts; the delta is the 711 per-
frame CVAT XMLs + review PDFs. Zero videos uploaded (the 3 pilot videos have byte-identical
Drive copies per the audit verifier). (2) Up

=== eng-source-cache | PR #418 | branch fix/api-source-remote-cache
  review_verdict: n/a  findings: 0
  tests_run/notes tail: Brief premise held (verified against origin/master e410136). Two
deliberate additions beyond the minimal brief, both from the audit's proposed fix + verifier
notes: (1) proxy warming extended to remote sources (one line ? the cached copy is a plain local
file; best-effort background thread, same cod

=== eng-outputdir-clobber | PR #419 | branch fix/output-dir-config-clobber
  review_verdict: n/a  findings: 0
  tests_run/notes tail: 1) Finding-ID discrepancy: the brief cites R1-18, but in
AUDIT_REPORT_khelsutra-guru_2026-07-02.md R1-18 is the GDriveApiStorage streaming/put finding;
the --output-dir clobber is R1-19 (backend/main.py:1992). The brief's task description matches
R1-19 exactly, so I fixed R1-19 and did NOT touch gdr

=== eng-uploaddir | PR #415 | branch fix/upload-dir-app-home
  review_verdict: n/a  findings: 0
  tests_run/notes tail: (1) Finding-ID mismatch in the brief: the audit report's R1-19 is the
--output-dir CLI-default clobber (backend/main.py:1992); the upload_dir CWD-relative finding the
brief describes is R1-20 (backend/api/uploads.py:50). I implemented the brief's described task
(upload_dir = R1-20) and did NOT touch

=== eng-gdrive-stream | PR #416 | branch fix/gdrive-api-chunked-download-safe-put
  review_verdict: n/a  findings: 0
  tests_run/notes tail: ID discrepancy: the brief cites R1-16, but in AUDIT_REPORT_khelsutra-
guru_2026-07-02.md the gdrive_api RAM-buffering/unsafe-put finding is R1-18 (R1-16 is the
decision-snapshot regression track). The task description unambiguously matches R1-18, so I
fixed that; commit/PR reference R1-18. Two delibe

=== eng-cloudrun-cancel | PR #417 | branch fix/cloud-run-poll-timeout-cancel
  review_verdict: n/a  findings: 0
  tests_run/notes tail: Finding-ID correction: the brief labels this R1-20, but in
AUDIT_REPORT_khelsutra-guru_2026-07-02.md the poll-timeout/GPU-abandonment finding is R1-21
(R1-20 is the unrelated upload_dir CWD bug). The substantive task described in the brief

```
=== eng-docs-reconcile | PR #420 | branch docs/reconcile-trackers-2026-07-02
  review_verdict: n/a findings: 0
  tests_run/notes tail: Three honest brief-premise corrections (all explained in the PR body):
(a) 'mark D13 ? (#386)' in CODE_CLEANUP_AUDIT was already done - the $6 tracker P12 row was
already ? #386, so no change was forced there; the actual remaining R1-01 doc work (P10 row +
the four stale ~1450-line sizings) was done
Shell cwd was reset to C:\Users\avidu\Projects\badminton-highlight-indexer
```

46. assistant (2026-07-02T15:46:26.995Z)

`gh pr list` shows ****zero open PRs**** in every repo ? yet the workflow reported opening PRs #54, #55, #56 and #414?#420. That contradiction is exactly what needs grounding. And the engine main checkout is sitting on an unexpected branch `docs/audit-late-cleanups`, while sdc and khelsutra master HEADs have moved too. Let me verify what's actually real on the remotes vs. only local.

47. user (2026-07-02T15:46:58.940Z)

```

48. assistant (2026-07-02T15:47:31.518Z)

This is a significant finding: the PRs are **CLOSED** or **MERGED**, not open ? 3 merged (sdc #56, engine #416, #417), 7 closed (#54, #55, #414, #415, #418, #419, #420). I never merged anything, and the workflow was told not to. Something/someone processed these concurrently, and the engine main checkout is now sitting on an unfamiliar branch `docs/audit-late-cleanups`. I need to establish ground truth before drawing any conclusion.

50. assistant (2026-07-02T15:48:28.095Z)

A concurrent sibling session (or the owner) has driven the audit **far** past my 3 PRs ? engine master now has #429?#438 plus tracker commits, including the main.py split (#431/#432), DB domain split (#437), supply-chain pins (#434/#435), SPA bundle refresh (#436), and retention scheduler (#433). My PRs were superseded (closed) or merged (#416/#417). So "is it done?" must be answered against this advanced master ? and per your instruction, I'll verify **in code**, trusting neither the sibling's tracker nor the PR titles. Let me read their disposition record and get the real per-repo state.

a7ae666 Hide demo rallies during active ingest (#146)
07b935d Show active ingest source name (#145)
b5c7861 fix ingest job refresh resume (#144)
7b6544f add web Playwright CUJ CI gate (#143)
41c9627 docs: mark retired droplet alpha across NEXT_STEPS, DEPLOY_ALPHA, GPU_VM_SERVING, LOCAL_APPLIANCE (#142)
f9eea14 web: resilient video-summary readers + show fps in the library (#140)

===== obsreport / rally-annotator master =====

a0c7252 add CI coverage gate and fix match plural (#1)
1f72c1c feat: configurable highlights item_noun (v0.1.3)
2f5a214 feat: spec-level customer_verdict override (v0.1.2)
cba67f2 feat: customer_message ? curated customer-facing flag text (v0.1.1)
--
ef9e088 fix canonical repo URL and reload persistence e2e (#28)
ef97739 fix: gate DOM scan on panel visibility + implement locale persistence (R2-1, R2-2) (#27)
3d604bc docs: sync READMEs with current state (multi-agent audit fixes) (#25)
f5ceefc docs(readme): tick live-test ? v1.7.1 verified in real VLC (incl. Indic rendering) (#24)

===== engine disposition doc (PR #429 body) =====

docs: reconcile audit docs to shipped state + record PR dispositions (#429)
Carries the genuinely-unapplied residuals from #420 (the rest of #420 was superseded by #421/#423) and reconciles the audit tracking docs after taking over #416/#417 and closing the superseded early-batch PRs (#414/#415/#418/#419).

- yolo_hybrid.py: fix stale ByteTrack-licensing docstring ? tracking is the standalone Apache-2.0 `trackers` package (D13/P12, #386), not "supervision's MIT ByteTrack" (matches person_detector.make_tracker; R1-14).
- DATA_IN_GCS.md: reconcile the §5 gap table ? Phase-1 metadata is in-bucket per §7 decisions #2/#3; it had shown the pre-Phase-1 gaps and contradicted §6/§7/§7b.
- CODE_CLEANUP_AUDIT: fix the tracker anchor (§7 -> §6), refresh main.py size (1448 -> 2360) in D1/P10/§8.1, and note #390 (step-1 split) is stale -> re-cut from origin/master.
- README.md: CODE_CLEANUP bullet -> 35 findings + §6 anchor.
- KHELSUTRA_GURU_HEALTH_REMEDIATION_PLAN: mark P6 (#416) / P7 (#417) Done, refresh the R1-01 line count, add the audit-batch PR-dispositions table.

Docs-only except one behaviour-neutral docstring. Local verification: ruff clean,
`python -m tools.check\_md\_links` clean, `git diff --check` clean.

52. assistant (2026-07-02T15:49:17.133Z)

The sibling session has addressed ****nearly the entire audit**** across all 5 repos ? including everything my workflow never reached (annotator 3 Hz scan + locale #27/#28, obsreport CI #1, khelsutra UX #144?#149, supply-chain pins, main.py split #431/#432, DB split #437). Per your instruction, I won't trust their tracker ? I'll verify in code. Let me read their master remediation tracker, then independently confirm the highest-risk fixes actually exist and are correct on `origin/master`.

khelsutra-guru multi-repo code audit ? umbrella (2026-07-02)

```
> **Status:** ? **DONE / RESIDUALS TRACKED** ? the single **umbrella code-audit doc** for the
`khelsutra-guru` workspace . **Owner:** Avi . **Created:** `2026-07-02` . **Last updated:**
`2026-07-02`
> **Lifecycle:** `DRAFT ? IN PROGRESS ? DONE ? archived`. **Tracking anchor:** the
**[Remediation tracker (live)](#remediation-tracker-live)** section below is the source of truth
for completed/open items; indexed in `docs/README.md`; lifecycle row in `docs/DOC_STATUS.md`;
live checkpoint in memory `current-state`.
> **What this is:** the 2026-07-02 multi-repo findings (below) **plus** the folded-in live
remediation tracker (formerly `KHELSUTRA_GURU_HEALTH_REMEDIATION_PLAN.md`, now archived). It
also **absorbs the prior engine audits** ? `CODE_CLEANUP_AUDIT_2026-06-24` and the June-2026
test-hardening sweep (both archived) ? summarized under **Prior audits (absorbed)**. Only this
umbrella remains live in `docs/`.
> **Findings below are a point-in-time snapshot** (verified against the SHAs listed below);
several were fixed after the snapshot ? see the live tracker for current status.
```

Two-round multi-agent audit: 14 read-only finders -> 115 raw findings -> dedup 110 -> 45
adversarially verified (round 1) + 8 more (round 2). Every finding below was CONFIRMED by an
independent adversarial verifier against origin-head working trees (engine e410136, khelsutra
f9eea14, rally-annotator 3d604bc, sdc adcd206, obsreport 1f72c1c).

**[Remediation tracker (live)](#remediation-tracker-live)** section below is the source of truth
for completed/open items; indexed in `docs/README.md`; lifecycle row in `docs/DOC_STATUS.md`;
live checkpoint in memory `current-state`.
615:## Remediation tracker (live)
733:### Deliverables & progress tracker ? **source of truth**
```

59. user (2026-07-02T15:49:59.935Z)

Remediation tracker (live)

> Folded in from the former standalone `KHELSUTRA\_GURU\_HEALTH\_REMEDIATION\_PLAN.md` (archived 2026-07-02 ? `docs/archives/past\_projects/KHELSUTRA\_GURU\_HEALTH\_REMEDIATION\_PLAN-FOLDED-2026-07-02.md`). This is the ****source of truth for completed/open items****; the findings above are the point-in-time snapshot. One small PR per tracker row, no stacking.

Decisions locked

#	Decision	Source / date	Implication
D1	Work from `C:\Users\avidu\Projects\khelsutra-guru` as the multi-repo root. Owner directive in synced memory, 2026-06-29. Touch each sub-repo separately; pull/fetch before reading or branching.		
D2	One small PR per coherent work item; no PR stacking. `CLAUDE.md` + synced memory working agreements. Waves below are sequencing groups, not giant branches.		
D3	Branch from the remote default branch explicitly. Global git safety rule. Use `git fetch origin` then `git checkout -b <branch> origin/<base>` for every repo.		
D4	Stage explicit paths only. Shared-checkout incident record. Never use `git add -A`, `.`, or `-u` in this workspace.		
D5	Coverage and CI gates must not regress. Owner pre-LGTM rule + repo CI contracts. Every code PR records which full/CI-equivalent checks ran, current floor, and any unavoidable skip.		
D6	SPA/UI changes require visual proof. Owner request, 2026-07-02. Any `khelsutra/web`, `site`, or extension UI PR must include validated Playwright screenshots/screencast evidence, stored under the existing workspace `khelsutra-screencast/` convention when applicable.		
D7	Owner-gated work is tracked, not executed. Repo guardrails. Cloudflare dashboard cleanup, launch signoff, legal/licensing, corpus promotion, and large media upload decisions remain explicit owner gates.		
D8	First remediation PR was docs-only. Owner request, 2026-07-02. The plan bootstrap (#423), index/register updates, and audit-status notes landed before code waves.		

Status ledger (post-sync)

All five git repos were fast-forwarded to origin head on 2026-07-02 and reconciled again after the remediation sweep:

Repo	Remediation head	Working tree	Notes
`badminton-highlight-indexer`	`0f32d39`	clean before final tracker branch	P0-P10, P15, P23-P25, P27 landed; final tracker reconciliation follows.
`khelsutra`	`61e5ccb`	clean apart from ignored build/coverage artifacts	P14 and P16-P21 landed with screencast/Playwright evidence where UI-visible.
`rally-annotator`	`ef9e088`	clean	P22 landed: canonical remote URL + reload/persistence E2E.
`sports-data-collector`	`8303fd6`	clean	P12/P13/P28 landed; `.gitignore` manifest policy is committed and golden source MD5s are durable.
`sports-obsreport`	`a0c7252` / tag `v0.1.3`	clean	P11 landed: CI coverage gate + `_plural("match", 3)` fix.

Already completed after the audit snapshot:

Audit item	Status	Evidence
`R2-5` engine `CLAUDE.md` stale state	Done	Engine PR `#421`, `d80aa02`.
`R1-13` engine `BACKLOG.md` shipped items stale	Done	Engine PR `#421`, `d80aa02`.
`R1-14` engine `DOC_STATUS` / docs index stale	Done	Engine PR `#421` + `#429`; docstring/anchor residuals cleared.
`R1-19` `output.output_dir` clobbered	Done	Engine PR `#422`, `4f148d1`.
`R1-20` `upload_dir` CWD-relative	Done	Engine PR `#422`, `4f148d1`.
`R1-06`, `R1-09`, `R1-36` retired-droplet docs	Done	Khelsutra PR `#142`, `41c9627`.
`R2-1` rally-annotator hidden panel scans DOM	Done	Rally-annotator PR `#27`, `ef97739`.
`R2-2` rally-annotator locale persistence	Done	Rally-annotator PR `#27`, `ef97739`.
`R2-3` collector `obsreport`>=0.1.3` dependency confusion	Done	Sports-data-collector PR `#57`, `9ce5a20`.
`R1-10` stale nested collector clone	Locally resolved	Directory absent after sync/cleanup; not a durable repo change.

| Critic addition: engine `.git` loose video blobs | Locally resolved | `git count-objects -vH` shows packed repo ~11 MiB, no garbage. |
| Critic addition: stale yt-dlp partial debris | Locally resolved | `data/videos` has no `\*.part`/`.ytdl` debris in this checkout. |

Pushback / reclassification:

Audit item	Revised status	Reason
--- --- ---		
`R1-27` misplaced type-ignore in `gcs.py`	**Done**	Fixed in `#428` (`d00b4db`); `mypy` backend training` clean with `google-cloud-storage` installed.
`R2-8` upload retention scheduling	**Done**	P8 shipped in `#433`: dry-run-by-default `tools.upload_retention` wrapper, tests, and deploy docs. Live scheduling remains a deployment/owner enablement step, not an active code gap.
`R1-01` main.py line count	**Closed by owner directive after P23 steps 1?2**	`backend/main.py` reduced **2360 ? 1623 lines** via `#431` and `#432`, with the anti-bloat ratchet in `tests/test_main_module_budget.py`. Owner later directed that the remaining `main.py` refactor be treated as complete and not pursued further in this audit; P24 is therefore scope-retired, not technically extracted.
Audit itself Snapshot Verified against pre-sync SHAs; this tracker is the live status.		

Resolved while reconciling:

- Engine `trackers` and `obsreport` dependency pins were mutable/duplicated at audit time; tracker P9/P10 resolved them with immutable commit refs (`#434`, `#435`).
- `rally-annotator` local remote pointed at `avidullu/rally-annotator.git`; P22 fixed the canonical URL and reload/persistence E2E (`Khelsutra/rally-annotator#28`).

Audit-batch PR dispositions (2026-07-02)

The audit surfaced an early batch of one-per-finding PRs (**#414?#420**, opened ~04:5x) that a later session then re-implemented **fresh** as the Wave-1/2 PRs. After a per-PR review (independent analysis + adversarial verification against `master`, both high-confidence), their fate was decided:

PR	Finding	Fate	Reason
---- ----- ----- -----			
#416	R1-18 GDrive stream / safe-put	**Merged** (P6)	Not superseded ? `gdrive_api.py` still whole-file-buffered + deleted-before-create on master; refreshed onto master, CI green, taken over.
#417	R1-21 Cloud Run poll-timeout salvage	**Merged** (P7)	Not superseded ? `cloud_run.py` still let `PolicyTimeout` propagate with no cancel; refreshed onto master, CI green, taken over.
#414	R2-5 `CLAUDE.md` truth-sync	Closed ? superseded by #421	master already truth-synced.
#415	R1-20 `upload_dir` app-home	Closed ? superseded by #422	master already routes `upload_dir` through `resolve_output_dir`.
#418	R1-03 `/api/source` cache	Closed ? superseded by #425 (P3)	master already fetch-once + `source_cache`.
#419	R1-19 `--output-dir` clobber	Closed ? superseded by #422	master already defaults `--output-dir` None + honors config.
#420	R1-13/14 docs reconcile	Closed ? 4/7 files superseded by #421/#423; 3 residuals carried into #429	yolo_hybrid docstring + DATA_IN_GCS §5 + CODE_CLEANUP §6/P10.

#390 was closed with disposition and re-cut fresh as P23 (`#431`, then `#432`). The owner later directed the remaining `main.py` refactor to be treated as complete for this audit.

Execution design ? wave model

Each wave is a theme for scheduling; each tracker row is an independent PR. A later wave can begin only when it does not conflict with active uncommitted work in the same repo.

- **Wave 0 ? tracking and truth sync:** the docs-only bootstrap PR (#423) + this consolidation.
- **Wave 1 ? engine cost/correctness:** paid re-bill, remote-source egress, ffmpeg timeouts, failed mypy fix. ? complete (P1?P4).

- ****Wave 2 ? engine resource durability:**** temp scratch lifecycle, GDrive API streaming/safe put, Cloud Run timeout handling, upload retention scheduling. ? complete (P5-P8).
- ****Wave 3 ? supply-chain and CI gates:**** SHA pins, obsreport CI, sports-data-collector ruff/coverage, khelsutra E2E CUJ, collector artifact policy. ? complete (P9-P14).
- ****Wave 4 ? UX/UI resilience:**** vendored SPA bundle, job resume/progress, upload filename, demo-grid hiding, HTML 5xx handling, WhatsApp file share. ? complete (P15-P22).
- ****Wave 5 ? structural debt:**** re-cut `#390`, apply owner-approved `main.py` split steps, scope-retire remaining `main.py` extraction, then split database facade. ? complete (P23-P25).
- ****Wave 6 ? issue hygiene and archival:**** issue hygiene, Roora non-video archive, owned-source MD5 metadata. ? complete (P26-P28).

Verification policy

For every code PR:

- Run the repo's normal CI-equivalent checks locally when feasible, or cite the green CI rollup and run only local checks that CI cannot cover, matching the repo's review policy.
- Preserve or raise coverage floors. Never lower a coverage floor without owner approval.
- Install missing test dependencies if the suite otherwise fails to collect; record unavoidable private/GPU/real-video skips.
- For engine PRs, default target is `python run\_all\_tests.py --cov=backend --cov=training --cov-report=term --cov-fail-under=70`, `ruff check .`, and `mypy backend training`, adjusted only for documented CI-policy exceptions.
- For `khelsutra/web` PRs, run typecheck, coverage, build, and any relevant Playwright CUJ; create/validate screencast evidence for UI behavior.
- For visual/UI PRs, attach the screencast or screenshots in the PR body and store durable artifacts under the existing `khelsutra-screencast/` workflow when the repo's harness supports it.

Risk table

Risk	Where it bites	Mitigation
Shared checkout absorbs sibling changes	All repos	Fetch/branch from `origin/<base>`, re-verify branch + HEAD before staging, stage explicit paths.
Docs-only PR accidentally includes local WIP	Especially collector	`.gitignore` Docs PRs touch docs only; the collector PR stages explicit paths and handles `.gitignore` deliberately.
Engine behavior fixes conflict with stale `#390`	`backend/main.py`	Land correctness/resource fixes first, then close/re-cut the split from fresh `origin/master`.
UI fixes regress layout or localized text	`khelsutra/web`, `site`, extension UI	Unit/e2e coverage plus Playwright screenshots/screencast validation.
Local cleanup looks durable but is machine-only	untracked debris / `.git` gc	Record local-only as local-only; add durable ignore/cleanup tests only when needed.
Owner-gated work gets blended into engineering PRs	Cloudflare, corpus, legal, launch	Keep gate rows marked `Gated? Owner`; PRs may document but not perform.

Honest limits

A green docs-only PR proves only that the project is tracked and links are valid. It does not fix runtime debt.

A green unit suite does not prove GPU, WSL, real-video, Cloudflare, Google Drive desktop, or GCS bucket behavior unless the PR explicitly runs those paths or records owner verification.

Screencasts prove rendered behavior for the captured viewport and flow; they do not replace automated tests. Any UI PR that fixes a bug must still add or update deterministic tests where feasible.

Deliverables & progress tracker ? ****source of truth****

Legend: Todo = not started; In progress = active branch/PR; Done = merged or locally completed as labeled; Blocked = owner/external. One small PR per row, no stacking.

ID	Wave	Deliverable	Repo	Depends on	Gated?	Status	PR
----	------	-------------	------	------------	--------	--------	----

```

|----|-----|-----|-----|-----|-----|-----|
| P0 | 0 | Create the tracked project doc; index it in `docs/README.md`; add `DOC_STATUS.md`
row; add live `NEXT_STEPS.md` pointer; add audit snapshot note. | engine | ? | No | Done | #423
|
| P1 | 1 | Fix failed `R1-27` mypy issue in `backend/storage/gcs.py`; prove with full mypy gate
where optional GCS dep is installed. | engine | P0 | No | Done | #428 |
| P2 | 1 | Fix `/api/process` idempotency for already-processed videos; add explicit
force/reprocess path; close `#340` and likely `#330`. | engine | P0 | No | Done | #424 |
| P3 | 1 | Cache/reuse remote source material for `/api/source` and annotation proxy; stop per-
Range full-object fetches. | engine | P0 | No | Done | #425 |
| P4 | 1 | Add timeouts to serving-path ffmpeg/ffprobe subprocesses and map timeout failures
cleanly. | engine | P0 | No | Done | #426 |
| P5 | 2 | Delete scoped remote-input scratch dirs or move them under a swept app-home temp
root; cover process/compile/assets/CLI/cloud marker reads. | engine | P3 | No | Done | #427 |
| P6 | 2 | Stream `GDriveApiStorage.fetch_to_local` and make overwrite safe via update/temp-
create semantics. | engine | P0 | No | Done | #416 |
| P7 | 2 | Add best-effort Cloud Run execution cancellation or late-marker salvage on poll
timeout. | engine | P0 | Real Cloud verification owner; fake-client PR not gated | Done | #417 |
| P8 | 2 | Package upload-retention scheduling docs/unit/timer wrapper for future hosted
deployments. | engine and/or khelsutra deploy docs | P0 | Enabling on live infra owner-gated |
Done | #433 |
| P9 | 3 | Pin `trackers` to immutable commit SHA and single-source/refactor duplicated install
literals. | engine | P0 | No | Done | #434 |
| P10 | 3 | Update engine `obsreport` dependency URL to `Khelsutra/` and immutable tag/commit
convention. | engine | P0 | No | Done | #435 |
| P11 | 3 | Add minimal CI to `sports-obsreport` and fix `_plural("match", 3)` customer text. |
sports-obsreport | P0 | No | Done | sports-obsreport #1 |
| P12 | 3 | Add `ruff` and coverage gate to `sports-data-collector`, fixing current ruff
findings first. | sports-data-collector | P0 | No | Done | sports-data-collector #58 |
| P13 | 3 | Resolve collector stale `.gitignore` artifact hunk deliberately: commit correct
manifest-preserving pattern or discard after owner direction. | sports-data-collector | P0 |
Minor owner direction | Done | sports-data-collector #59 |
| P14 | 3 | Add `khelsutra/web` Playwright CUJ CI profile and mock/contract drift guard. |
khelsutra | P0 | No | Done | khelsutra #143 |
| P15 | 4 | Refresh engine `backend/ui/` bundle from current `khelsutra/web`; add staleness
check or doctor warning. | engine + khelsutra source | P14 preferred | No | Done | #436 |
| P16 | 4 | Make SPA ingest jobs refresh-resumable via `?job=` / localStorage and
heartbeat/elapsed progress. Include screencast validation. | khelsutra | P14 preferred | No |
Done | khelsutra #144 |
| P17 | 4 | Keep uploaded filename visible during upload and processing. Include localized tests
and screencast if visible. | khelsutra | P14 preferred | No | Done | khelsutra #145 |
| P18 | 4 | Hide/replace demo rally grid while a real upload/process job is running. Include
screencast validation. | khelsutra | P16 or shared busy signal | No | Done | khelsutra #146 |
| P19 | 4 | Handle HTML/proxy 5xx bodies without rendering raw markup; keep plain-text engine
502 details. | khelsutra | P0 | No | Done | khelsutra #147 |
| P20 | 4 | Implement Web Share API file-share attempt for compiled reels with graceful WhatsApp
fallback. Include mobile-capable validation notes. | khelsutra | P0 | No | Done | khelsutra #148
|
| P21 | 4 | Fix stale SPA API comment anchors to route/function anchors instead of line numbers.
| khelsutra | P0 | No | Done | khelsutra #149 |
| P22 | 4 | Update rally-annotator remote URL to canonical org; add remaining reload/persistence
E2E if not covered by `#27`. | rally-annotator | P0 | No | Done | rally-annotator #28 |
| P23 | 5 | Close stale/conflicting `#390`; re-cut first `main.py` orchestration split from
fresh `origin/master`; add anti-bloat ratchet. | engine | P1-P8 settle | No | Done | #431, #432
|
| P24 | 5 | Remove remaining `backend.main` shim cycles and lift mypy quarantine where type-
clean. | engine | P23 | No | Done (scope-retired by owner directive; no further `main.py`
refactor in this audit) | ? |
| P25 | 5 | Split `Database` behind facade by domain only when the migration/correctness wave is
stable. | engine | P23 | No | Done | #437 |
| P26 | 6 | Update or close stale GitHub issues: `#97`, `#101`, `#103`, `#388`, `#175`, `#301`,
related duplicates. | mixed | Relevant PRs merged | Owner issue disposition where needed | Done
| issue comments/closures |
| P27 | 6 | Back up Roora pilot non-video artifacts to the corpus archive and update
`DATA_IN_GCS.md`. | engine/non-git | P0 | Videos upload owner-gated; metadata archive not gated

```

| Done | #438 |
| P28 | 6 | Verify/hash six owned golden source videos from `F:` and record durable MD5/path metadata; do not upload 38 GB without owner approval. | sports-data-collector/non-git | Owner mounts F: | Upload scope owner-gated | Done | sports-data-collector #60 |

Residual owner-gated / future backlog

Area	Remaining item	Owner/external gate
Corpus videos	Decide and execute Phase 2 upload scope for the large source videos: full 4K originals vs generated proxies, plus whether to include the wider archive beyond the 15-clip golden set.	Owner storage/cost/provenance decision; P28 records MD5s only.
GCS eval plumbing	Make eval/litmus consumers fetch `gs://` labels/trajectories/videos by storage URI instead of local `open()` paths, then run a launch-report-style GCS litmus.	Future engineering project; may need authenticated GCS CI or owner cloud box.
Hosted deployment	Enable the upload-retention wrapper in any live hosted deployment and finish Cloudflare/alpha operator cleanup.	Owner infra access / deployment timing.
Product backlog	Non-audit feature issues remain open (for example live sharing/access, richer video-info panel, quality/perf/backlog tickets).	Normal product prioritization, not part of this audit remediation board.

Definition of done

- [x] All non-owner-gated P0/P1/P2/P3 audit findings either resolved, explicitly reclassified, or moved into a narrower tracked project.
- [x] Every code repo has a credible local/CI quality gate for its size: tests, lint, type checking where appropriate, and coverage floor where feasible.
- [x] Engine cost leaks and scratch leaks are fixed or guarded (P2?P7).
- [x] Engine vendored SPA bundle is current or has a durable staleness signal.
- [x] SPA processing UX survives refresh and gives testers visible job/file state.
- [x] UI-visible PRs include validated visual artifacts and deterministic tests where feasible.
- [x] Stale deployment docs/issues no longer direct future sessions at retired infrastructure.
- [x] Owner-gated items remain clearly labeled and have no accidental code/data mutation.
- [x] This tracker's rows are kept current with merged PR numbers.
- [x] When the waves complete, flip this umbrella `Status ? DONE`; archival is deferred while residual owner-gated choices stay linked here.

Prior audits (absorbed)

Earlier engine audits were folded into this umbrella and archived (full detail retained for lineage):

CODE_CLEANUP_AUDIT ? 2026-06-24 deep audit (archived)

The 2026-06-24 whole-repo engine audit surfaced ****35 items**** (33 fresh + 2 absorbed from `BACKLOG.md`). ****Phase 1 COMPLETE**** ? 14 structural refactorings (typed-config migration, `create\_app()` app-factory, no-op segmenter-validator fix, deep config merge, quick wins) shipped in `#352`?`#371`. ****Phase 2 largely shipped**** ? Gemini provider error contract (`#373`/`#378`), fabricated-data removal from the motion segmenter (`#385`), Gemini remote-file GC (`#380`), `sv.ByteTrack` ? standalone `trackers` package (`#386`), config/type fixes. The `main.py` god-module split was re-cut under this umbrella as P23 (`#431`, `#432`) and then scope-closed by owner directive; the remaining Phase-3 pool (B4/B7/B8/D5/D6/D8-D10/D14/O3/O4) stays future backlog, not part of this remediation board. Full register + its \$6 tracker: `docs/archives/past-projects/CODE\_CLEANUP\_AUDIT\_2026-06-24-SUPERSEDED-2026-07-02.md`.

June-2026 test-hardening sweep (archived)

The 2026-06-14 `CODE\_AUDIT\_AND\_TEST\_HARDENING` sweep (T1?T5 + the full hardening loop + verification per `#162`) and its `DEFERRED\_HARDENING\_PLAN` / `HARDENING\_LOOP\_HANDOFF` companions are ****COMPLETE****. Their former top-level pointer-stubs were removed on 2026-07-02 (resolving `DOC\_STATUS.md` \$4 finding #4); full records live in `docs/archives/`:

[`CODE\_AUDIT\_AND\_TEST\_HARDENING-COMPLETED-2026-06-14.md`](archives/CODE_AUDIT_AND_TEST_HARDENING-COMPLETED-2026-06-14.md),
[`DEFERRED\_HARDENING\_PLAN-COMPLETED-2026-06-14.md`](archives/DEFERRED_HARDENING_PLAN-

COMPLETED-2026-06-14.md), [HARDENING_LOOP_HANDOFF-COMPLETED-2026-06-14.md](archives/HARDENING_LOOP_HANDOFF-COMPLETED-2026-06-14.md). The async-job-model design item (DEFERRED_HARDENING_PLAN #16) shipped as EXECUTION_POLICY.md P1.

Changelog

- 2026-07-02 ? **P23 step 2: server_runtime extraction (#432).** Moved the 7 pure server/network bootstrap helpers (CORS/host-allowlist config + the `indexer --app` launcher) ? `backend/server\_runtime.py` (AST-identical move; re-imported above `app = FastAPI(...)` since middleware calls two of them at import time; re-exported for the 24 `m.<name>` test call sites). `main.py` **1703 ? 1623** ; ratchet tightened 1750 ? 1650. Full suite 1579?/cov 85.16%, mypy clean; the suite caught 3 launcher tests patching the moved `webbrowser` attr on `backend.main` ? repointed to `backend.server\_runtime`.
- 2026-07-02 ? **Final tracker reconciliation (#439).** Replaced all `this PR`/Todo/Blocked placeholders with actual merged PRs, marked P24 scope-retired per owner instruction, and moved unresolved work into the residual owner-gated/future-backlog table.
- 2026-07-02 ? **P28 golden source video hashes (sports-data-collector#60).** Mounted `F:`, MD5-hashed the six owned source MP4s (~39 GB), updated the collector DB paths, and committed `data/golden\_source\_videos.json` with a regression test; upload remains owner-gated.
- 2026-07-02 ? **P27 Roora pilot non-video archive (#438).** Reconciled the local non-video Roora pilot record into `gs://khelsutra-rally-corpus/archive/roora-pilot-2026-06/`: 717 small annotation objects were already present, then 22 missing sidecars/CSV/trajectory files plus `manifest.json` were uploaded. Verification: 740 objects under the prefix, manifest schema `khelsutra.roora\_pilot\_archive.v1`, 739 manifest entries / 5,731,641 bytes, and **0 video objects** ; raw videos remain owner-gated.
- 2026-07-02 ? **P8 upload-retention wrapper (#433).** Added `tools.upload\_retention`, a dry-run-by-default scheduled wrapper over the already-tested `tools.cleanup\_caches` upload-retention planner. It supports one-shot cron/systemd/Task Scheduler use and a long-running `--interval-minutes` loop for hosted wrappers; docs now place it in the alpha go-live checklist. Focused tests cover stale-source planning, dry-run safety, apply/delete behavior, delete failures, and the timer seam.
- 2026-07-02 ? **P9 trackers SHA pin (#434).** Resolved roboflow/trackers tag `2.5.0` to immutable commit `1bf611d95262450c04fcf093334dd4c7116a2df7`, moved the git requirement into `requirements-trackers.txt`, and made requirements, CI, nightly, Cloud Run, and DigitalOcean bootstrap consume that single source instead of hard-coded mutable tag literals.
- 2026-07-02 ? **P10 obsreport pin (#435).** Updated the engine `reporting` extra from the stale `avidullu/sports-obsreport` SSH redirect and mutable `v0.1.3` tag to the canonical HTTPS `Khelsutra/sports-obsreport` repo pinned at commit `a0c7252c6e4159f8702360bea1cb46e5148b5c9f` (sports-obsreport #1: CI coverage gate + `match` plural fix).
- 2026-07-02 ? **P15 vendored SPA refresh (#436).** Rebuilt committed `backend/ui/` from KhelSutra web commit `61e5ccb649955e2177d24818428e7b4795c46724` (after P16-P21 landed) and added a doctor-time bundled-UI freshness warning against a sibling `khelsutra` checkout.
- 2026-07-02 ? **P25 database facade split (#437).** Kept `backend.infrastructure.database.Database` as the only public facade while moving media/segment CRUD, async jobs/cost/policy, and user-model store methods into domain mixins (`database\_media.py`, `database\_jobs.py`, `database\_user\_models.py`). Schema migration and connection logic remain centralized in `database.py`.
- 2026-07-02 ? **P23 step 1: god-module split started (#431).** Closed stale #390 (its extracted copies predated the #417/#424?#427 rewrites) and re-cut fresh: `backend/orchestration.py` (10 processing/compile orchestration members, machine-verified AST-identical modulo 7 enumerated call-time-seam deltas; `backend.main` re-exports keep every monkeypatch/worker seam working). `main.py` **2360 ? 1703 lines** . Added the **anti-bloat ratchet** `tests/test\_main\_module\_budget.py` (line budget 1750, tightened by later splits · route ceiling 18, new endpoints ? `backend/api/` · re-export identity contract). `backend.orchestration` is NOT mypy-quarantined (~657 lines newly type-checked; P24 down-payment). Full suite 1579?/cov 85.16%, mypy clean, adversarial 3-lens review pre-commit (it caught the initial missing seam routing for `VideoCompiler`/`emit\_indexer\_report`/`compute\_video\_id` ? fixed + re-verified).

60. assistant (2026-07-02T15:50:41.618Z)

This is an unusually complete remediation ? the sibling ran a full 28-item plan (P0?P28) mapping essentially every audit finding to a merged PR, with an honest residuals table. But your instruction is explicit: **ground it in code, verify the fixes are legitimate.** My pre-LGTM

gate says reproduce, never trust the tracker. So I'll now independently verify the highest-risk claims in actual master code, starting with CI health and the headline cost bug (#340/#424) that my own workflow failed to author.

61. user (2026-07-02T15:50:53.183Z)

```

64. assistant (2026-07-02T15:51:24.093Z)

Master just advanced to `204dd00` (#440) ? the sibling is actively pushing, and memory now declares the remediation complete. The idempotency fix is confirmed *present*:
`backend/orchestration.py:432` carries the `force=true to reprocess` path (the split moved processing out of main.py). Now I need to confirm these fixes are *legitimate* ? that the logic actually short-circuits before the paid Gemini call, not just that keywords exist. Let me read the actual fix bodies.

65. user (2026-07-02T15:51:28.800Z)

===== master tip now =====

204dd00 record final audit cleanup state

```

##### IDEMPOTENCY short-circuit body (orchestration.py ~400-445) #####

# "in_process" once the local segmenter is reached, set on the response as "cloud_run" by
# _maybe_dispatch_remote when it dispatches. None ? nothing ran (validation/config fail).
compute_actual: Optional[str] = None
response: Optional[Dict[str, Any]] = None
try:
    if (
        existing_video
        and existing_video.get("status") == "processed"
        and not req.force
    ):
        cached_segments = db.query_play_segments(video_id, {})

```

```

        if cached_segments:
            logger.info(
                "[API] Reusing cached segmentation for video_id=%s; force=true bypasses
cache.",
                video_id,
            )
            response = {
                "video_id": video_id,
                "status": "success",
                "message": (
                    f"Reused {len(cached_segments)} cached play segments. "
                    "Pass force=true to reprocess this video."
                ),
                "results": existing_video.get("validation_results", []),
                "play_segments": cached_segments,
                "cached": True,
                "compute": {
                    "path": "cached",
                    "requested": getattr(req, "compute", None),
                },
            }
            return response

    # 1. Run pluggable validators (with-context variant surfaces ffmpeg_probe_meta for the
report)
    notify("validating")

```

66. assistant (2026-07-02T15:51:40.286Z)

Idempotency fix is **legitimate** ? it returns cached segments with `cached: True` **before** validators and the segmenter dispatch, with a `req.force` bypass. That genuinely prevents the Gemini re-bill. Let me batch-verify the remaining engine fixes in code.

67. user (2026-07-02T15:51:52.147Z)

##### obsreport #1 CI + _plural fix #####
.github/workflows/ci.yml
origin/main:src/obsreport/render/markdown.py:105:def _plural(noun: str, n: int) -> str:
```

70. assistant (2026-07-02T15:52:58.721Z)

All verified legitimate: gdrive uses chunked `MediaIoBaseDownload` + in-place `update()`;
cloud_run has `cancel\_execution` wired into the `PolicyTimeout` handler; sdc has real MD5s +
ruff/coverage gate; annotator persists locale via `browser.storage.local`; obsreport now has CI.
The remediation is genuinely real, not paper. Final step ? a grounded **gap analysis**: which
audit findings are ***not*** actually resolved, independent of what the tracker claims.

71. user (2026-07-02T15:53:10.575Z)

R1-24/30: are scratch/*.py still tracked in engine?

```

72. assistant (2026-07-02T15:54:32.523Z)

I have enough to answer with confidence, grounded in code. Here's the thorough analysis.

Is the 07?02 audit "completely done"? Short answer: ****substantially yes, but not 100% ? and not by this sess**

While my build workflow was running it ****hit the session limit**** (resets ~1:10pm) after opening only the 3 sports?data?collector PRs. In parallel, a ****concurrent sibling session** (Claude Opus 4.8 + a `[codex]` agent) drove the remediation to near?completion? ? a full 28?item plan (P0?P28) across all 5 repos, folded into the engine's `docs/AUDIT_REPORT_khelsutra-guru_2026-07-02.md` (now the umbrella tracker, status `*DONE / residuals tracked*`). My PRs were superseded (closed) or inherited (#416/#417 merged).

Per your instruction, I did ****not**** trust that tracker ? I verified the headline fixes in `origin/master`` code.

? Verified legitimate in code (not just claimed)

```
| Audit finding | Fix | Grounded evidence |
|---|---|---|
| **#340 Gemini re?bill** (the P0 cost bug my workflow *failed* to author) | #424 |
`backend/orchestration.py:415?438` returns cached segments with `cached:True` **before**
validators + segmenter dispatch; `req.force` bypass. Real short?circuit. |
| ffmpeg wedges 1?worker queue | #426 | `stitcher/compiler.py:148,334,516` ? `timeout=` on all 3
serving?path `subprocess.run` calls |
| `/api/source` full re?download per Range | #425 | `main.py:524?555` per?video?locked
`source_cache` (fetch?once, atomic) |
| scratch never reclaimed | #427 | `storage/__init__.py:98` `cleanup_acquired_local_input`,
called in the job finally |
| gdrive RAM buffering + unsafe put | #416 | `gdrive_api.py:174` chunked `MediaIoBaseDownload`;
`:200` in?place `update()` |
| Cloud Run abandons billing GPU | #417 | `cloud_run.py:73/146/269` `cancel_execution` wired
into the `PolicyTimeout` handler |
| trackers mutable tag x5 | #434 | `requirements-trackers.txt` immutable SHA `1bf611d?`,
single?sourced |
| main.py god?module | #431/#432 | main.py **2198?1621 lines**;
`tests/test_main_module_budget.py` ratchet (budget 1650 + route ceiling) |
| DB monolith | #437 | facade + domain mixins (`database_media/jobs/user_models.py`) |
| obsreport dep?confusion + zero CI | sdc #57 / obsreport #1 | git+ssh pin; obsreport now has
`.github/workflows/ci.yml` |
| annotator 3 Hz scan + LD?i8 | annotator #27 | `content.ts:24?25,48` boot?seed + persist locale
via `browser.storage.local` |
| sdc no lint/cov gate | sdc #58 | `ci.yml:21,23` `ruff check .` + `--cov-fail-under=80` |
| Roora paid artifacts single?copy | #438 / sdc #56 | GCS archive (740 objs, 0 videos) +
git?versioned golden CSVs |
| golden corpus registry rot | sdc #60 | `data/golden_source_videos.json` real MD5s; uploads
owner?gated as you approved |
```

****CI is green on all five masters**** (engine `204dd00`, khelsutra `1639804`, sdc `1423e84`,
annotator `ef9e088`, obsreport `a0c7252`). Gate #1 passes.

?? Genuinely NOT done ? grounded residuals

The tracker's DoD says "all non?owner?gated P0?P3 resolved." Code says that's slightly optimistic. ****Known/acknowledged deferrals**** (also flagged out?of?scope in my plan): CORS wildcard default (`main.py:123`), path?jail vs `gs://` ingest (#327), NSFW preflight (#332), perf/NVDEC (#349/#331), M4 quality?floor, decision?snapshot, no lockfile.

****Fell through the cracks ? neither session addressed these, and they're *not* clearly tracked:****

- ****sdc crawler silent partial?set ingest (R1?41, P2 correctness)**** ? grep of `badminton\_crawler.py` shows ****no**** partial/non?curated handling was added. Untouched.
- ****7 `scratch/\*.py` still tracked in engine (R1?24/30)**** ? `git ls-files scratch/\*.py` still returns all 7, incl. `gemini\_video\_debugger.py` (the secret?leak?risk one). No `git rm --cached` landed.
- ****CI ruff/mypy still unpinned + duplicated across ci.yml/nightly.yml (R1?11/26)**** ? bare `pip install ruff`/`mypy` in both; ****#384 still open****.
- ****khelsutra #103**** (size/duration stats) and ****#102**** (debug panel) remain genuinely open/partial.

? Housekeeping this session left behind

The killed workflow orphaned ****15 worktrees + pushed branches**** (11 engine, 3 sdc, 1 khelsutra) under the scratchpad ? all now stale (PRs closed/superseded). The sdc main checkout may still carry the dead `.gitignore` WIP hunk (sibling fixed it via #59). All safe to remove.

I held off editing the shared `current-state` memory ? the sibling is actively rewriting it, and I don't want a collision.

****Want me to:**** (1) clean up my 15 orphaned worktrees/branches, and (2) knock out the 4 "fell?through?the?cracks" residuals as small isolated PRs (sdc crawler guard, `git rm --cached`

the scratch files, pin ruff/mypy)? I'd coordinate around the active sibling session to avoid stepping on it.

73. user (2026-07-02T15:54:36.685Z)

the siblins session is now complete and you are the only one operatin on the repo now.

please do archive the audit doc if its truly complete and if 1-2 items are left they can be filed as github issues and marked the work as done.

74. user (2026-07-02T15:54:52.298Z)

[Request interrupted by user]

75. user (2026-07-02T15:55:30.276Z)

please clean up the workflows and knock off any remaining ones right away with merged PRs. No sibling session is active now so you can operate at full throttle

76. assistant (2026-07-02T15:55:50.625Z)

Understood ? full throttle, I'm the sole operator. Let me re-establish ground truth, clean up the orphaned worktrees/branches, then land the residuals as merged PRs and archive the doc.

77. user (2026-07-02T15:56:07.434Z)

===== engine: is cce3fa1 / docs/audit-late-cleanups safe to leave (ancestor of master)? =====
cce3fa1 NOT ancestor ? has unique commits, inspect before moving
```

78. assistant (2026-07-02T15:56:24.855Z)

All main checkouts are already back on their default branch at origin head, clean. The `origin/` errors are just an unset `origin/HEAD` symref ? harmless. Only `docs/audit-late-cleanups` (cce3fa1) is a dangling non-ancestor branch ? let me confirm it has nothing unique before I

delete it, then remove all orphaned worktrees/branches.

79. user (2026-07-02T15:56:28.196Z)

## Changelog

-- `2026-07-02` ? **Late cleanup reconciliation (`#440`).** Recorded final repo heads after
`sports-data-collector#56` and `khelsutra#150`; noted superseded stale PR closures (`sports-
data-collector#54/#55`, `khelsutra#141`) so the audit ends with no open remediation PRs.
+- `2026-07-02` ? **Late cleanup reconciliation (this PR).** Recorded final repo heads after
`sports-data-collector#56` and `khelsutra#150`; noted superseded stale PR closures (`sports-
data-collector#54/#55`, `khelsutra#141`) so the audit ends with no open remediation PRs.
- `2026-07-02` ? **P23 step 2: server_runtime extraction (`#432`).** Moved the 7 pure
server/network bootstrap helpers (CORS/host-allowlist config + the `indexer --app` launcher) ?
`backend/server_runtime.py` (AST-identical move; re-imported above `app = FastAPI(...)` since
middleware calls two of them at import time; re-exported for the 24 `m.<name>` test call sites).
`main.py` **1703 ? 1623** ; ratchet tightened 1750 ? 1650. Full suite 1579?/cov 85.16%, mypy
clean; the suite caught 3 launcher tests patching the moved `webbrowser` attr on `backend.main`
? repointed to `backend.server_runtime`.
- `2026-07-02` ? **Roora pilot golden-label fixtures (`sports-data-collector#56`).** Git-
versioned the small human-corrected badminton, pickleball, and table-tennis Roora goldens with
tests; the full non-video archive remains in GCS under `archive/roora-pilot-2026-06/`, and
videos remain owner-gated.
- `2026-07-02` ? **Retired-droplet docs final sweep (`khelsutra#150`).** Re-cut the
stale/conflicting `khelsutra#141` from current master, removed remaining live-droplet
instructions, recorded the single-origin default, and kept Cloudflare/SSH-key cleanup as owner
tasks. Local verification: site tests, web typecheck, web coverage gate, and web Playwright
CUJs; CI green.
```

81. assistant (2026-07-02T15:56:48.866Z)

Confirmed ? master's `#440` version is the *final* one; cce3fa1 only has a `(this PR)` placeholder, strictly inferior. Everything is superseded. Now the full cleanup: remove all orphaned worktrees and delete the dead branches (local + the closed-PR remote branches).

82. user (2026-07-02T15:57:03.531Z)

```

```

83. assistant (2026-07-02T15:57:15.034Z)

The registrations pruned cleanly (only main checkouts remain), but the ``.git/worktrees`` metadata hit Windows permission locks. Let me verify the physical dirs are gone, force-clean any leftovers, and delete the dead branches.

84. user (2026-07-02T15:57:21.398Z)

```
===== leftover wt-* dirs in scratchpad =====
0
===== force-remove any leftover physical worktree dirs =====
===== prune admin entries again =====
remaining wt dirs: 0
```

85. assistant (2026-07-02T15:57:29.613Z)

Physical dirs all gone. Now delete the dead branches ? local orphans plus the closed-PR remote branches.

86. user (2026-07-02T15:57:32.232Z)

The `del-FAIL (MERGED)` cases are just stale local tracking refs ? those branches were auto-deleted on merge, so a `fetch --prune` clears them. The `DEL (CLOSED)` deletions succeeded. Let me prune stale refs, then re-list what genuinely remains on the remotes.

94. user (2026-07-02T16:01:10.060Z)

        # Roll back download accounting for the now-discarded file.
        videos_downloaded -= 1

```

104. assistant (2026-07-02T16:03:54.921Z)

The R1-41 bug is clear: the per-set `except` just prints a warning and continues, so a match with a failed set gets ingested with **partial rally data** as if complete. Let me read the surrounding context to scope a clean fix that mirrors the existing skip-with-rollback pattern.

105. user (2026-07-02T16:03:58.638Z)

```

print(" Downloading best-resolution video...")
video_filename = f"{video_id}.mp4"
dest_path = os.path.join(self.local_dir, video_filename)

result = download_best_video(
    youtube_url, dest_path,
    max_height=self.max_height,
    max_size_mb=self.max_download_size_mb,
)
if result.success:
    local_path = result.path
    download_size_mb = result.size_mb
    probed_resolution = result.resolution_label
    probed_fps = result.fps
    videos_downloaded += 1
    total_size_downloaded_mb += download_size_mb
    print(f" Successfully downloaded video "
          f"({download_size_mb:.2f} MB, {probed_resolution or 'unknown res'})"
          f"{'', {probed_fps:g}fps' if probed_fps else ''}")
else:
    print(f" Failed to download video: {result.error}")

```

106. assistant (2026-07-02T16:04:38.068Z)

The crawler fix is clean ? mirror the existing skip?with?rollback pattern when any set fails. Before I execute, let me confirm the scratch files aren't referenced anywhere (else I'd promote, not untrack) and pin the CI tools to their current versions to guarantee zero lint churn.

107. user (2026-07-02T16:04:45.442Z)

```

##### Are the 7 tracked scratch files referenced anywhere in the repo? #####
scratch/analyze_motion.py : 1 non-scratch references
scratch/clean_state.py : 1 non-scratch references
scratch/diagnose_rally.py : 1 non-scratch references
scratch/gemini_video_debugger.py : 1 non-scratch references
scratch/list_models.py : 1 non-scratch references
scratch/test_ai_segmenter.py : 1 non-scratch references
scratch/test_thresholds.py : 1 non-scratch references

##### current ruff/mypy versions available (to pin at current-latest = zero churn) #####
ruff 0.15.16
mypy 2.1.0 (compiled: yes)

##### exact CI lint/type lines (ci.yml + nightly.yml) #####

```

108. assistant (2026-07-02T16:04:51.442Z)

Each scratch file has exactly one non?scratch reference ? let me see what it is before untracking (a doc pointing users to them would need updating too).

109. user (2026-07-02T16:04:53.502Z)

```

origin/master:docs/AUDIT_REPORT_khelsutra-guru_2026-07-02.md:321:- evidence: .gitignore:69-71
'Throwaway repro scripts + PR-body / handoff scratch notes ... never meant to be committed' +
`scratch/`; but `git ls-files scratch` returns 7 files (scratch/analyze_motion.py,
clean_state.py, diagnose_rally.py, gemini_video_debugger.py, list_models.py,

```

test_ai_segmenter.py, test_thresholds.py), tracked since ~2026-05-18 (commit 72f972e). Checked: none contain literal keys. artifacts/ by contrast is clean (ignored AND untracked), so #377's fix is otherwise holding.

origin/master:docs/AUDIT_REPORT_khelsutra-guru_2026-07-02.md:324:- verifier notes: Finding is accurate as filed. Sharper failure scenario: a developer temporarily hardcodes GEMINI_API_KEY or a personal path into tracked scratch/gemini_video_debugger.py mid-debug, `git status` shows it (contrary to the dir's 'kept out of git status' contract) and `git commit -a` carries it into history ? the exact leak class #314 scrubbed. Fix note: `git rm --cached scratch/\*.py` keeps the files on disk and they become ignored immediately since the scratch/ rule already matches untracked paths; no .gitignore edit needed. Promoting any keeper to tools/ first is optional judgment, not required for the untrack step.

origin/master:docs/AUDIT_REPORT_khelsutra-guru_2026-07-02.md:325:- verifier reasoning: .gitignore:69-71 at HEAD e410136 contains the exact 'never meant to be committed' comment and the `scratch/` rule at line 71 (verified via sed and `git check-ignore -v scratch/definitely\_new\_file.py` ? .gitignore:71). `git ls-files scratch` returns exactly the 7 claimed files (scratch/analyze_motion.py, clean_state.py, diagnose_rally.py, gemini_video_debugger.py, list_models.py, test_ai_segmenter.py, test_thresholds.py). History confirms tracking since 72f972e (2026-05-18) plus 6b7d5dd; last scratch/ commit (8615534) and recent .gitignore commits (aa915a7, 959c630, 71a8241/#377) did not untrack them ? not fixed. Grep of tracked scratch files shows only env-var key reads (e.g. scratch/gemini_video_debugger.py:32 `os.environ.get("GEMINI\_API\_KEY")`), no literal secrets, matching the finder. The trap is real: ignore rules don't apply to tracked files, so edits to these 7 appear in git status and can ride into commits despite the dir's contract; repo has proven leak-sensitivity (#314 scrub, .leakscan_private at .gitignore:76).

110. assistant (2026-07-02T16:05:36.428Z)

Confirmed: the only reference is the audit doc itself, so untracking is safe, and I'll verify ruff/mypy green locally at the pinned versions to eliminate churn risk. Executing the three PRs now. Starting with the sdc crawler fix ? creating the branch and reading exact text to edit.

111. user (2026-07-02T16:05:40.599Z)

Switched to a new branch 'fix/crawler-partial-set-guard'
fix/crawler-partial-set-guard

112. user (2026-07-02T16:05:40.627Z)

```

116. user (2026-07-02T16:06:30.085Z)

The file C:\Users\avidu\Projects\khelsutra-guru\sports-data-collector\src\crawlers\badminton_crawler.py has been updated successfully. (file state is current in your context ? no need to Read it back)

117. assistant (2026-07-02T16:06:32.403Z)

Now let me look at the existing crawler test to mirror its mocking style for a regression test.

118. user (2026-07-02T16:06:32.848Z)

```

1         """B6: the crawler's per-set and merged CSV temp files must be cleaned up even when
2         a download or parse fails mid-loop, so data/temp doesn't accumulate orphaned files.
3
4         The cleanup logic lives inline in ShuttleSetCrawler.fetch_and_curate (a large method
5         that does live network I/O), so we test the CONTRACT directly: monkeypatch
6         urllib.request.urlretrieve to (a) write a real set CSV then (b) raise on the second
7         set, and assert no per-set temp file is left behind. The merged-CSV cleanup is
8         covered by the parse-failure path.
9         """

```

```

10 from unittest import mock

116

```

119. assistant (2026-07-02T16:07:02.987Z)

The existing B6 test already exercises a set?2 failure (still passes ? my skip path also cleans temps). Let me verify the crawler's actual DB?insert calls so my new regression test asserts the right thing.

120. user (2026-07-02T16:07:05.689Z)

```

=== db insertion + catalog/set_count parsing in crawler ===
98:         set_count = int(float(str(match.get("set", "2")).strip() or "2"))
100:         set_count = 2
102:         video_id = f"shuttleaset_{match_id}"
111:         local_path = None
130:             local_path = result.path
141:             local_path = None
160:         for s in range(1, set_count + 1):
271:             existing = self.db.get_video(video_id)
277:             self.db.insert_video(video_meta)
278:             count = self.db.insert_badminton_rallies(rallies)

```

121. assistant (2026-07-02T16:07:14.106Z)

Confirmed ? `local\_path = None` is set before the download block (my skip is safe), and inserts happen at lines 277?278, after my skip check. Adding the regression test.

122. user (2026-07-02T16:07:24.071Z)

The file C:\Users\avidu\Projects\khelsutra-guru\sports-data-collector\tests\test_crawler_tempfile.py has been updated successfully. (file state is current in your context ? no need to Read it back)

123. user (2026-07-02T16:07:30.499Z)

```
=== run the crawler tests (old + new) ===
...
3 passed in 0.50s
=== ruff on changed files ===
All checks passed! [100%]
```

124. assistant (2026-07-02T16:07:34.933Z)

Both old tests still pass, new regression test passes, ruff clean. Let me run the full sdc suite with coverage (matching CI's `--cov-fail-under=80`) before committing.

branch 'fix/crawler-partial-set-guard' set up to track 'origin/fix/crawler-partial-set-guard'.
To <https://github.com/Khelsutra/sports-data-collector.git>
* [new branch] fix/crawler-partial-set-guard -> fix/crawler-partial-set-guard
<https://github.com/Khelsutra/sports-data-collector/pull/61>

129. assistant (2026-07-02T16:08:23.445Z)

sdC PR **#61** is up and CI is running. Now the two engine PRs. First, untracking the 7 scratch files (R1?24/30).

130. user (2026-07-02T16:08:30.409Z)

```
=== staged removals (index) ===
D      scratch/analyze_motion.py
D      scratch/clean_state.py
D      scratch/diagnose_rally.py
D      scratch/gemini_video_debugger.py
D      scratch/list_models.py
D      scratch/test_ai_segmenter.py
D      scratch/test_thresholds.py
=== confirm files still on disk (untracked, gitignored) ===
55
scratch/gemini_video_debugger.py
=== confirm no tracked scratch py remain ===
0
```

131. assistant (2026-07-02T16:08:39.674Z)

Untracking is clean ? 7 files removed from the index, still on disk and now git?ignored, zero tracked scratch scripts remain. Committing and opening the PR.

132. user (2026-07-02T16:08:56.315Z)

```
To https://github.com/Khelsutra/badminton-highlight-indexer.git
* [new branch]      chore/untrack-scratch-scripts -> chore/untrack-scratch-scripts
https://github.com/Khelsutra/badminton-highlight-indexer/pull/441
```

133. assistant (2026-07-02T16:09:17.230Z)

Engine PR #441 is up. Now the CI tool pins (R1?11/26) ? pinning ruff/mypy to the exact installed versions, verified green locally so there's zero CI churn.

134. user (2026-07-02T16:09:22.234Z)

```
=== verify ruff+mypy GREEN on master at the versions I'll pin (0.15.16 / 2.1.0) ===
All checks passed!

Success: no issues found in 146 source files
```

135. assistant (2026-07-02T16:09:46.346Z)

ruff 0.15.16 and mypy 2.1.0 both pass clean on master (146 files) ? pinning to these is guaranteed zero?churn, and merge?on?green self?protects if CI's reduced?dep env disagrees. Let me read the exact CI lines and pin them.

136. user (2026-07-02T16:09:49.367Z)

149. assistant (2026-07-02T16:11:50.531Z)

sdcc #61 merge issued (gh is quiet on success); engine #441 is `UNSTABLE` only because the full suite is still running (all else green). While the engine suites run, let me confirm #61 merged and file the one genuinely-untracked security residual (CORS default, R1-12) as an issue.

150. user (2026-07-02T16:12:07.756Z)

```
=== confirm sdc #61 merged + master advanced ===
MERGED @ 2026-07-02T16:11:22Z
bfc014f fix(crawler): skip whole match when any per-set CSV fails (R1-41) (#61)
1423e84 git-version Roorra pilot golden labels
```

```
=== check no existing CORS issue, then file one ===
https://github.com/Khelsutra/badminton-highlight-indexer/issues/443
```

151. assistant (2026-07-02T16:12:18.551Z)

#61 merged (master `bfc014f`), CORS residual filed as ****#443****. Now waiting for the two engine full suites to finish so I can merge on green ? polling until both conclude.

152. user (2026-07-02T16:12:24.941Z)

```
[1] #441=OK #442=OK
BOTH CONCLUDED
```

153. assistant (2026-07-02T16:12:29.071Z)

Both engine PRs concluded green. Verifying no check slipped to failure, then merging both.

154. user (2026-07-02T16:12:48.206Z)

```
=== #441 check summary ===
[{"SUCCESS":11}]
  failures: none
=== #442 check summary ===
[{"":1}, {"SUCCESS":10}]
  failures: none

=== merge #441 then #442 (squash, delete branch) ===
  #441 merged
  #442 merged
```

155. assistant (2026-07-02T16:12:59.689Z)

Both merged cleanly (no failures). Let me confirm master advanced and both PRs show MERGED, then sync local.

156. user (2026-07-02T16:13:20.926Z)

```
#441: MERGED @ 437c8c7
#442: MERGED @ da2d4bf
=== engine master now ===

  khelsutra: local=0 remote-extra=0
  rally-annotator: local=0 remote-extra=0
  sports-obsreport: local=0 remote-extra=0
```

157. assistant (2026-07-02T16:14:06.644Z)

Both engine PRs merged ? master at `da2d4bf`, scratch fully untracked, ruff/mypy pinned. Cleaning the leftover merged local branches and checking which owner-gated residuals already have issues (so archiving the doc won't orphan them).

158. user (2026-07-02T16:14:11.930Z)

```
=== delete merged local branches ===
  Deleted branch chore/untrack-scratch-scripts (was be90b63).
  Deleted branch ci/pin-ruff-mypy (was 3359774).
  error: cannot delete branch 'fix/crawler-partial-set-guard' used by worktree at
'C:/Users/avidu/Projects/khelsutra-guru/sports-data-collector'

=== existing engine issues that may already track the owner-gated residuals ===
  #332 [safety] Content-safety pre-flight litmus: flag non-sports / NSFW video BEFORE sending it
to Gemini
  #328 Surface the per-video runlog / execution trace to the user (endpoint + UI), not just
server logs
  #327 Allow gs:// / s3:// / gdrive-api:// ingest on an exposed (jailed) box ? scheme-exempt
recognized storage backends from the path-jail
  #301 T11 follow-up: run the upload retention sweep as an automated scheduled job (hosted
alpha)
```

159. assistant (2026-07-02T16:14:22.697Z)

#301 already tracks hosted retention and #327 tracks gs:// ingest. The two owner-gated future items lacking issues are the corpus Phase2 upload decision and GCS eval plumbing ? filing those so archival doesn't orphan them. Also fixing the sdc branch (checkout still on it).

160. user (2026-07-02T16:14:39.029Z)

Deleted branch fix/crawler-partial-set-guard (was 2d08286).
=== file the 2 owner-gated future residuals as tracking issues ===
<https://github.com/Khelsutra/badminton-highlight-indexer/issues/444>
<https://github.com/Khelsutra/badminton-highlight-indexer/issues/445>

161. assistant (2026-07-02T16:14:59.492Z)

All residuals are now either done or issue-tracked (#443 CORS, #444 corpus, #445 GCS eval; #301/#327/#332/#384/etc. already open). The audit is genuinely complete ? so I'll archive the doc. First, finding every inbound reference so the move doesn't break the link-check CI.

162. user (2026-07-02T16:15:01.902Z)

=== inbound references to the umbrella doc filename (live docs + code) ===
origin/master:docs/DOC_STATUS.md:47:| `AUDIT\_REPORT\_khelsutra-guru\_2026-07-02.md` ***(umbrella)***
| **?? DONE / RESIDUALS TRACKED??** ? the single umbrella code-audit doc: 2026-07-02 multi-repo findings + the folded-in ***Remediation tracker*** (P0?P28 all closed, with owner-gated residuals listed) + absorbed prior audits (`CODE\_CLEANUP\_AUDIT\_2026-06-24`, June-2026 hardening ? both archived). | Later | Keep as the terminal audit report while residual owner-gated data/infra choices remain linked; archive per \$2 only after owner confirms it should leave live docs |
origin/master:docs/NEXT_STEPS.md:19:3b. ****[Claude] Five-repo audit health remediation**** ? tracked in the umbrella `docs/AUDIT\_REPORT\_khelsutra-guru\_2026-07-02.md` (the standalone plan was folded in + archived 2026-07-02); its ***Remediation tracker (live)*** section is the source of truth. Wave 1 (engine cost/correctness/resource) is complete and Wave 2 P5?P7 merged; later waves cover CI/supply-chain, SPA UX with screencast proof, and structural cleanup.
origin/master:docs/README.md:14:- AUDIT_REPORT_khelsutra-guru_2026-07-02.md ? **?? Umbrella code-audit doc (? DONE / RESIDUALS TRACKED):??** the single code-audit doc for the five-repo `khelsutra-guru` workspace ? the 2026-07-02 multi-repo findings ****plus**** the folded-in ****Remediation tracker**** (P0?P28 all closed; formerly `KHELSUTRA\_GURU\_HEALTH\_REMEDIATION\_PLAN.md`) and the ****absorbed prior audits**** (`CODE\_CLEANUP\_AUDIT\_2026-06-24` + the June-2026 hardening sweep, both archived). Its residual table lists the remaining owner-gated data/infra choices.
origin/master:tests/test_main_module_budget.py:18:``docs/AUDIT\_REPORT\_khelsutra-guru\_2026-07-02.md`` (Remediation tracker P23/P24).
origin/master:tests/test_main_module_budget.py:55: f"module instead (P23/P24 in docs/AUDIT_REPORT_khelsutra-guru_2026-07-02.md). "

163. assistant (2026-07-02T16:15:44.495Z)

All residuals are done or issue-tracked, and DOC_STATUS.md:47 says to archive once the owner confirms ? which you just did. Only `docs/README.md:14` is a real markdown link (the others are code-spans/comments), so the link-check CI only needs that repointed. Building the archival PR ? creating the branch and reading exact anchor text.

164. user (2026-07-02T16:15:48.447Z)

=== umbrella doc: Status header (1-6) ===

khelsutra-guru multi-repo code audit ? umbrella (2026-07-02)

> ****Status:**** ? ****DONE / RESIDUALS TRACKED**** ? the single ****umbrella code-audit doc**** for the `khelsutra-guru` workspace . ****Owner:**** Avi . ****Created:**** `2026-07-02` . ****Last updated:**** `2026-07-02`
> ****Lifecycle:**** `DRAFT ? IN PROGRESS ? DONE ? archived`. ****Tracking anchor:**** the ****[Remediation tracker (live)](#remediation-tracker-live)**** section below is the source of truth for completed/open items; indexed in `docs/README.md`; lifecycle row in `docs/DOC\_STATUS.md`;

```

live checkpoint in memory `current-state`.
> What this is: the 2026-07-02 multi-repo findings (below) plus the folded-in live
remediation tracker (formerly `KHELSUTRA_GURU_HEALTH_REMEDIATION_PLAN.md`, now archived). It
also absorbs the prior engine audits ? `CODE_CLEANUP_AUDIT_2026-06-24` and the June-2026
test-hardening sweep (both archived) ? summarized under Prior audits (absorbed). Only this
umbrella remains live in `docs/`.
> Findings below are a point-in-time snapshot (verified against the SHAs listed below);
several were fixed after the snapshot ? see the live tracker for current status.
=== Changelog anchor (last ~4 lines) ===
- `2026-07-02` ? Roora pilot golden-label fixtures (`sports-data-collector#56`). Git-
versioned the small human-corrected badminton, pickleball, and table-tennis Roora goldens with
tests; the full non-video archive remains in GCS under `archive/roora-pilot-2026-06/`, and
videos remain owner-gated.
- `2026-07-02` ? Retired-droplet docs final sweep (`khelsutra#150`). Re-cut the
stale/conflicting `khelsutra#141` from current master, removed remaining live-droplet
instructions, recorded the single-origin default, and kept Cloudflare/SSH-key cleanup as owner
tasks. Local verification: site tests, web typecheck, web coverage gate, and web Playwright
CUJs; CI green.
- `2026-07-02` ? Final tracker reconciliation (`#439`). Replaced all `this PR`/`Todo/Blocked`
placeholders with actual merged PRs, marked P24 scope-retired per owner instruction, and moved
unresolved work into the residual owner-gated/future-backlog table.
- `2026-07-02` ? P28 golden source video hashes (`sports-data-collector#60`). Mounted `F:`,
MD5-hashed the six owned source MP4s (~39 GB), updated the collector DB paths, and committed
`data/golden_source_videos.json` with a regression test; upload remains owner-gated.
- `2026-07-02` ? P27 Roora pilot non-video archive (`#438`). Reconciled the local non-video
Roora pilot record into `gs://khelsutra-rally-corpus/archive/roora-pilot-2026-06/`: 717 small
annotation objects were already present, then 22 missing sidecars/CSV/trajectory files plus
`manifest.json` were uploaded. Verification: 740 objects under the prefix, manifest schema
`khelsutra.roora_pilot_archive.v1`, 739 manifest entries / 5,731,641 bytes, and 0 video
objects; raw videos remain owner-gated.
- `2026-07-02` ? P8 upload-retention wrapper (`#433`). Added `tools.upload_retention`, a
dry-run-by-default scheduled wrapper over the already-tested `tools.cleanup_caches` upload-
retention planner. It supports one-shot cron/systemd/Task Scheduler use and a long-running
`--interval-minutes` loop for hosted wrappers; docs now place it in the alpha go-live checklist.
Focused tests cover stale-source planning, dry-run safety, apply/delete behavior, delete
failures, and the timer seam.
- `2026-07-02` ? P9 trackers SHA pin (`#434`). Resolved roboflow/trackers tag `2.5.0` to
immutable commit `1bf611d95262450c04fcf093334dd4c7116a2df7`, moved the git requirement into
`requirements-trackers.txt`, and made requirements, CI, nightly, Cloud Run, and DigitalOcean
bootstrap consume that single source instead of hard-coded mutable tag literals.
- `2026-07-02` ? P10 obsreport pin (`#435`). Updated the engine `reporting` extra from the
stale `avidull/sports-obsreport` SSH redirect and mutable `v0.1.3` tag to the canonical HTTPS
`Khelsutra/sports-obsreport` repo pinned at commit `a0c7252c6e4159f8702360bea1cb46e5148b5c9f`
(sports-obsreport `#1`: CI coverage gate + `match` plural fix).
- `2026-07-02` ? P15 vendored SPA refresh (`#436`). Rebuilt committed `backend/ui/` from
KhelSutra web commit `61e5ccb649955e2177d24818428e7b4795c46724` (after P16-P21 landed) and added
a doctor-time bundled-UI freshness warning against a sibling `khelsutra` checkout.
- `2026-07-02` ? P25 database facade split (`#437`). Kept
`backend.infrastructure.database.Database` as the only public facade while moving media/segment
CRUD, async jobs/cost/policy, and user-model store methods into domain mixins
(`database_media.py`, `database_jobs.py`, `database_user_models.py`). Schema migration and
connection logic remain centralized in `database.py`.
- `2026-07-02` ? P23 step 1: god-module split started (`#431`). Closed stale `#390` (its
extracted copies predated the `#417/#424?#427` rewrites) and re-cut fresh:
`backend/orchestration.py` (10 processing/compile orchestration members, machine-verified AST-
identical modulo 7 enumerated call-time-seam deltas; `backend.main` re-exports keep every
monkeypatch/worker seam working). `main.py` 2360 ? 1703 lines. Added the anti-bloat
ratchet `tests/test_main_module_budget.py` (line budget 1750, tightened by later splits .
route ceiling 18, new endpoints ? `backend/api/` . re-export identity contract).
`backend.orchestration` is NOT mypy-quarantined (~657 lines newly type-checked; P24 down-
payment). Full suite 1579?/cov 85.16%, mypy clean, adversarial 3-lens review pre-commit (it
caught the initial missing seam routing for
`VideoCompiler`/`emit_indexer_report`/`compute_video_id` ? fixed + re-verified).
=== 'Already completed' table header line ===
644:Already completed after the audit snapshot:

```

165. assistant (2026-07-02T16:16:29.326Z)

Good ? I have the anchors. Let me locate the Changelog header and the Definition of done final box, then make the archival edits.

166. user (2026-07-02T16:16:33.241Z)

```
804:## Changelog
--- DoD final box + archival-deferred line ---
790:- [x] When the waves complete, flip this umbrella `Status ? DONE`; archival is deferred
while residual owner-gated choices stay linked here.

167. assistant (2026-07-02T16:16:35.373Z)

Now making the archival edits. First the doc's Status header and DoD/changelog:

168. user (2026-07-02T16:16:40.895Z)

<tool_use_error>File has not been read yet. Read it first before writing to it.</tool_use_error>

169. user (2026-07-02T16:16:44.367Z)

```
3      > **Status:** ? **DONE / RESIDUALS TRACKED** ? the single **umbrella code-audit doc**
for the `khelsutra-guru` workspace . **Owner:** Avi . **Created:** `2026-07-02` . **Last
updated:** `2026-07-02`
```

170. user (2026-07-02T16:16:52.128Z)

The file C:\Users\avidu\Projects\khelsutra-guru\badminton-highlight-indexer\docs\AUDIT_REPORT_khelsutra-guru_2026-07-02.md has been updated successfully. (file state is current in your context ? no need to Read it back)

171. user (2026-07-02T16:16:54.949Z)

```
790      - [x] When the waves complete, flip this umbrella `Status ? DONE`; archival is deferred
while residual owner-gated choices stay linked here.
```

172. user (2026-07-02T16:17:00.319Z)

The file C:\Users\avidu\Projects\khelsutra-guru\badminton-highlight-indexer\docs\AUDIT_REPORT_khelsutra-guru_2026-07-02.md has been updated successfully. (file state is current in your context ? no need to Read it back)

173. assistant (2026-07-02T16:17:03.575Z)

Now the changelog entry (at the top of the Changelog section), then the git mv and reference updates:

174. user (2026-07-02T16:17:04.534Z)

```
804      ## Changelog
```

805

806 - `2026-07-02` ? ****Late cleanup reconciliation (`#440`)**** Recorded final repo heads after `sports-data-collector#56` and `khehsutra#150`; noted superseded stale PR closures (`sports-data-collector#54/#55`, `khehsutra#141`) so the audit ends with no open remediation PRs.

175. user (2026-07-02T16:17:16.629Z)

The file C:\Users\avidu\Projects\khehsutra-guru\badminton-highlight-indexer\docs\AUDIT_REPORT_khehsutra-guru_2026-07-02.md has been updated successfully. (file state is current in your context ? no need to Read it back)

176. assistant (2026-07-02T16:17:19.474Z)

Now the git mv and the inbound reference updates (README, DOC_STATUS, NEXT_STEPS, test comments):

177. user (2026-07-02T16:17:22.455Z)

```
moved -> docs/archives/past_projects/AUDIT_REPORT_khehsutra-

The file C:\Users\avidu\Projects\khelsutra-guru\badminton-highlight-indexer\docs\NEXT_STEPS.md has been updated successfully. (file state is current in your context ? no need to Read it back)

185. assistant (2026-07-02T16:17:56.102Z)

Now the two test?comment references to the moved doc path:

186. user (2026-07-02T16:17:56.877Z)

```
14         ``monkeypatch.setattr(backend.main, ...)`` are load-bearing seams ? see
15         ``backend/api/job_worker.py``'s module docstring).
16
17     If this test fails your PR: extract, don't inline. Umbrella tracker:
18     ``docs/AUDIT_REPORT_khelsutra-guru_2026-07-02.md`` (Remediation tracker P23/P24).
19     """"
20
21     import ast
```

187. user (2026-07-02T16:18:01.539Z)

The file C:\Users\avidu\Projects\khelsutra-guru\badminton-highlight-indexer\tests\test_main_module_budget.py has been updated successfully. (file state is current in your context ? no need to Read it back)

188. user (2026-07-02T16:18:04.829Z)

```
54         f"backend/main.py is {n} lines (budget {MAIN_LINE_BUDGET}). Don't grow the "
55         f"god-module back ? extract to backend/orchestration.py / backend/api/ / a new "
56         f"module instead (P23/P24 in docs/AUDIT_REPORT_khelsutra-guru_2026-07-02.md). "
57         f"If a later split shrank main.py, TIGHTEN this budget in the same PR."
```

189. user (2026-07-02T16:18:09.819Z)

The file C:\Users\avidu\Projects\khelsutra-guru\badminton-highlight-indexer\tests\test_main_module_budget.py has been updated successfully. (file state is current in your context ? no need to Read it back)

190. assistant (2026-07-02T16:18:15.346Z)

All references updated. Now verifying: no stale live references remain, the markdown link?check passes (critical for CI), and the budget test still passes.

191. user (2026-07-02T16:18:24.191Z)

=== any remaining OLD-path refs in LIVE files? (want 0) ===
(^ empty = clean)

=== markdown link check (the CI gate that a bad move would break) ===
[check-md-links] clean ? no broken internal links in live docs.

=== budget test (comment-only change) + ruff ===

```
...
3 passed in 3.23s
All checks passed!
```

[100%]

192. assistant (2026-07-02T16:18:37.896Z)

Everything green ? link?check clean (the gate a bad move would break), budget test passes, no

stale refs. Committing the archival and opening the PR.

193. user (2026-07-02T16:18:46.724Z)

```
fatal: pathspec 'docs/AUDIT_REPORT_khelsutra-guru_2026-07-02.md' did not match any files

```

200. assistant (2026-07-02T16:19:50.099Z)

CI's link?check **failed** even though my local run passed ? a real discrepancy I need to diagnose before merging. Let me pull the actual failure from the CI log.

201. user (2026-07-02T16:19:53.067Z)

(Bash completed with no output)

202. user (2026-07-02T16:19:58.378Z)

run 28605075121 is still in progress; logs will be available when it is complete

203. assistant (2026-07-02T16:20:16.258Z)

Let me reproduce locally and inspect the checker's exclusion logic ? my local "clean" contradicts CI.

204. user (2026-07-02T16:20:19.194Z)

```
=== re-run link check on committed branch state, full output ===
[check-md-links] clean ? no broken internal links in live docs.
exit=0
```

```
=== how does the tool decide what to scan / exclude? ===
3:Scans tracked ``*.md`` files (via ``git ls-files``) and, for each ``[text](dest)`` /
``![alt](dest)``
10:fenced code blocks, and any file under ``docs/archives/`` ? archived docs are frozen
snapshots whose
11:relative links are historical-by-design (see ``docs/DOC_STATUS.md`` §2). Mirrors
``tools/leak_scan.py``:
24:#: Source docs under these prefixes are NOT scanned ? archived = frozen snapshots whose
relative
25:#: links are historical-by-design (DOC_STATUS.md §2 step 5).
26:EXCLUDE_PREFIXES: Tuple[str, ...] = ("docs/archives/",)
98:         if anchor and target.suffix.lower() == ".md" and target.is_file():

tracked in the umbrella `docs/AUDIT_REPORT_khelsutra-guru_2026-07-02.md` (the standalone plan
was folded in + archived 2026-07-02); its *Remediation tracker (live)* section is the source of
truth. Wave 1 (engine cost/correctness/resource) is complete and Wave 2 P5?P7 merged; later
waves cover CI/supply-chain, SPA UX with screencast proof, and structural cleanup.
origin/master:docs/README.md:14:- [AUDIT_REPORT_khelsutra-
guru_2026-07-02.md](AUDIT_REPORT_khelsutra-guru_2026-07-02.md) ? **? Umbrella code-audit doc (?
DONE / RESIDUALS TRACKED):** the single code-audit doc for the five-repo `khelsutra-guru`
workspace ? the 2026-07-02 multi-repo findings **plus** the folded-in **Remediation tracker**
(P0?P28 all closed; formerly `KHELSUTRA_GURU_HEALTH_REMEDIATION_PLAN.md`) and the **absorbed
prior audits** (`CODE_CLEANUP_AUDIT_2026-06-24` + the June-2026 hardening sweep, both archived).
Its residual table lists the remaining owner-gated data/infra choices.
origin/master:tests/test_main_module_budget.py:18:`docs/AUDIT_REPORT_khelsutra-
guru_2026-07-02.md` (Remediation tracker P23/P24).
origin/master:tests/test_main_module_budget.py:55:         f"module instead (P23/P24 in
docs/AUDIT_REPORT_khelsutra-guru_2026-07-02.md). "

```

207. assistant (2026-07-02T16:21:38.636Z)

The checker resolves links relative to each doc and validates `target.exists()`. My local passes on the same commit, so the failure is likely in the PR *merge* commit. Let me fetch the exact broken link from the failed job's log via the API.

208. user (2026-07-02T16:21:42.674Z)

=== direct job log via REST API ===

```

2026-07-02T16:19:16.7409678Z Included Software: https://github.com/actions/runner-
images/blob/ubuntu24/20260628.225/images/ubuntu/Ubuntu2404-Readme.md
2026-07-02T16:19:20.3578610Z [check-md-links] 1 broken internal link(s):

```

209. assistant (2026-07-02T16:22:22.211Z)

Found it ? and it's a real defect in my commit. The earlier `git add` **aborted** on the non-existent old path (`fatal: pathspec ... did not match`), so only the `git mv` rename got committed ? my content edits to README/DOC_STATUS/NEXT_STEPS/test were left **uncommitted**. Local passed (worktree has them); CI failed (commit lacks them, so README still points at the deleted path). Let me verify and complete the commit.

210. user (2026-07-02T16:22:26.163Z)

```

10     # Current state - khelsutra-guru
11
12     **Updated:** 2026-07-02
13
14     ## Live Checkpoint
15
16     The 2026-07-02 health audit remediation is complete. Engine `#440` merged as `204dd00`
and the umbrella tracker now says **DONE / RESIDUALS TRACKED** with late stale-PR cleanup
recorded. All audit rows `P0` through `P28` are closed; `P24` remaining `main.py` refactor work
is scope-retired by owner directive. There are no open remediation PRs across the five git
repos.
17
18     Live tracker:
19
20     `C:\Users\avidu\Projects\khelsutra-guru\badminton-highlight-
indexer\docs\AUDIT_REPORT_khelsutra-guru_2026-07-02.md`
21
22     Final repo heads:
23
24     | Repo | Head |
25     |---|---|
26     | `badminton-highlight-indexer` | `204dd00` |
27     | `khelsutra` | `1639804` |
28     | `rally-annotator` | `ef9e088` |
29     | `sports-data-collector` | `1423e84` |
30     | `sports-obsreport` | `a0c7252` |
31
32     ## Latest Completed Items
33
34     - `#438`: Roora pilot non-video GCS archive complete; raw videos remain excluded.
35     - `sports-data-collector#56`: Roora pilot golden-label fixtures committed with tests.
```

```

36      - `sports-data-collector#60`: six owned golden source MP4 MD5/path manifest committed;
uploads remain owner-gated.
37      - `khealsutra#150`: retired-droplet docs refreshed from current master; stale `#141`
closed superseded.
38      - `#439` and `#440`: tracker/docs final reconciliation complete and merged.
39      - Closed superseded stale PRs: `sports-data-collector#54`, `sports-data-collector#55`,
`khealsutra#141`.
40      - Root non-git audit snapshot replaced with a pointer to the live engine tracker.
41
42      ## Verification
43
44      - Engine `#439` and `#440` CI green, including full offline suite with coverage floor,
ruff, mypy, wheel smoke, markdown links, leak/license checks, and cross-OS golden fixtures.
45      - Engine docs local checks: `python -m tools.check_md_links`; `git diff --check`.
46      - Sports-data-collector `#56`: merge-result local full suite `293 passed, 2 skipped`;
coverage `82.02%` against floor `80`; CI green.
47      - Sports-data-collector `#60`: local full suite `290 passed, 2 skipped`; coverage
`82.02%` against floor `80`; CI green.
48      - Khealsutra `#150`: local `site` tests `95 passed`; web typecheck; web coverage gate;
web e2e/contract smoke `5 passed`; CI green.
49      - Prior UI rows include screencast/Playwright evidence under
`C:\Users\avidu\Projects\khealsutra-guru\khealsutra-screencast\_raw`.
50
51      ## Leftovers
52
53      | Area | Leftover | Status |
54      |---|---|---|
55      | Corpus videos | Decide/upload large source videos: full 4K originals vs proxies, and
wider archive scope. | Owner-gated future work. |
56      | GCS eval/litmus | Make eval/litmus consume `gs://` data directly. | Future engineering
project. |
57      | Hosted deployment | Enable upload retention in live infra and clean up
Cloudflare/alpha. | Owner infra/timing. |
58      | Product backlog | Non-audit feature/quality issues. | Normal backlog. |
59
60      ## Resume Rule

```

229. user (2026-07-02T16:35:49.774Z)

The file c:\Users\avidu\claude\projects\c--Users-avidu-Projects-khealsutra-guru\memory\current-state.md has been updated successfully. (file state is current in your context ? no need to Read it back)

230. user (2026-07-02T16:35:58.294Z)

The file c:\Users\avidu\claude\projects\c--Users-avidu-Projects-khealsutra-guru\memory\current-state.md has been updated successfully. (file state is current in your context ? no need to Read it back)

231. assistant (2026-07-02T16:36:01.042Z)

Now the final confirmation ? the engine master CI on the archival tip:

232. user (2026-07-02T16:37:49.760Z)

```

[1] master CI: ac6184b in_progress
[2] master CI: ac6184b in_progress
[3] master CI: ac6184b in_progress
[4] master CI: ac6184b in_progress
[5] master CI: ac6184b completed success

```

233. assistant (2026-07-02T16:38:08.216Z)

Engine master CI on the archival commit (`ac6184b`) is **completed success**. Everything is done

and verified. Here's the wrap-up.

? Complete ? workspace cleaned, residuals landed, audit doc archived

```
**Cleanup (workflows/worktrees/branches)**
- Removed all **15 orphaned worktrees** from the session-limited workflow.
- Deleted every merged/closed remediation branch across the 5 repos. Final state: **0 non-
default branches, 0 worktrees, 0 dirty files** in every repo, each on its default branch at
origin head.

**Residuals knocked off ? 4 PRs, all merged on green**
| PR | Finding | What |
|---|---|---|
| [sdc #61](https://github.com/Khelsutra/sports-data-collector/pull/61) | R1?41 | Crawler now
**skips the whole match when any per?set CSV fails** (was silently ingesting partial rally data)
+ regression test. Suite 294?, cov 81.33%. |
| [engine #441](https://github.com/Khelsutra/badminton-highlight-indexer/pull/441) | R1?24/30 |
`git rm --cached` the 7 tracked `scratch/*.py` (defied the ignore?contract; secret?leak vector).
Kept on disk, now ignored. |
| [engine #442](https://github.com/Khelsutra/badminton-highlight-indexer/pull/442) | R1?11/26 |
Pin `ruff==0.15.16` / `mypy==2.1.0` in ci + nightly ? verified green at those versions (zero
churn). |
| [engine #446](https://github.com/Khelsutra/badminton-highlight-indexer/pull/446) | ? |
**Archived the umbrella audit doc** ? `docs/archives/past_projects/?-COMPLETED-2026-07-02.md`,
repointed all inbound refs. |

**Remaining owner?gated / future items filed as issues** (so archival doesn't orphan them):
[#443](https://github.com/Khelsutra/badminton-highlight-indexer/issues/443) CORS default,
[#444](https://github.com/Khelsutra/badminton-highlight-indexer/issues/444) corpus Phase?2
upload, [#445](https://github.com/Khelsutra/badminton-highlight-indexer/issues/445) GCS eval
plumbing ? plus already?open #301/#327/#332/#384.

**One honest note:** my first archival commit was incomplete ? `git add` aborted on the
already?moved old path, so only the `git mv` landed and README still pointed at the deleted
file. **CI's link?check caught it** (my local passed because the worktree had the edits); a
second commit landed the content and it went green. Good reminder that the link?check gate earns
its keep.

**Final state:** engine `master` = `ac6184b`, CI **completed success**; all 5 repos green and
clean. The audit is genuinely done ? every non?owner?gated finding is fixed in code
(independently re?verified at file:line) and every remaining item is a tracked GitHub issue.
Memory checkpoint updated.
```
