Transcript

1. user (2026-07-02T06:11:32.663Z)

hello. Please use the khelsutra-guru as the project root and do a indepth analysis of the repos inside the root directory and identify any critical fixtures and tech debt worth cleaning up. Please make a targeted plan and execute it after my approval

2. assistant (2026-07-02T06:11:32.663Z)

I'll start by getting oriented: check the khelsutra-guru project memory for a session handoff, and list what's inside the root directory.

3. assistant (2026-07-02T06:11:32.663Z)

1 # Memory Index

```

2
3      ## ? Start here
4      - [Working root = khelsutra-guru (multi-repo)](working-root-khelsutra-guru.md) ? **owner
directive 2026-06-29:** OPEN `Projects\khelsutra-guru` as the UI project (5 git repos), switch
sub-repo per task. Memory store MIGRATED to the khelsutra-guru key (Option B); badminton-
highlight-indexer is no longer the startup anchor. Detail + migration-verification note
[[working-root-khelsutra-guru]].
5      - [? rally finding-B promotion (P2b) + launch signoff](next-session-rally-finding-b-
promotion.md) ? **freshest, 2026-06-29.** Fixes A/B/C MERGED (`0c9c693`); B behind
`inactivity_temporal_density` (default-OFF no-op). ? NEXT = run golden A/B at SERVED, promote-
or-reject via `promote_if_served_safe`, then full suite + GO/NO-GO launch report (recommend,
don't decide). Runbook `docs/RALLY_DETECTION_FIXES_PLAN.md` §8 Q2; detail [[next-session-rally-
finding-b-promotion]].
6      - [? multi-shuttle / prominent-court detection](next-session-multishuttle-rally.md) ?
design journey (2026-06-19/20). Multi-track + court-aware selector measured vs GOLDEN: does NOT
beat single-track baseline ? NO PR; it's a targeted lever, not an F1 win. ? NEXT = the verdict-
flipping experiment: a separable-adjacent-court golden clip (`Boxhill_Doubles`, owner GPU) w/
court-membership-only selection. Detail [[next-session-multishuttle-rally]]. *(Design/scratch.)*
7      - [? batteries-included downloadable app](next-session-packaging-app.md) ? packaging
track. ? P3+P2b+P2c DONE 2026-06-22 (engine #310/#312, khelsutra #88) ? v1 LIGHT FEATURE-
COMPLETE; only OWNER steps remain (clean-box acceptance + ffmpeg UX). North-star (native-
WASB/training/annotation) future + gated. Doc `docs/PACKAGING_PLAN.md` §7; detail [[packaging-
app-plan]].
8      - [? khelsutra UX/l10n/runnable-tool](next-session-ux-localization.md) ? refreshed
2026-06-22. Tool BUILT + localized (6 langs); ALPHA LIVE + real-use-proven at
`https://api.khelsutra.guru` (single-origin). ? NEXT = 13-issue triage backlog: async
`/api/compile` (#329, kills the 524), M7 Cloud-Run L4 GPU, NSFW litmus (#332) + UX/obs polish;
launch gate needs native-speaker review. Full ramp-up in [[current-state]] SESSION WRAP.
*(Engine/serving track = own [session-handoff](session-handoff.md)).*
9      - [? golden regression fixtures (optional)](next-session-golden-fixtures.md) ? track
COMPLETE 2026-06-22 (8 PRs); clean clone runs rally-seg regression (synthetic + 6 real fixtures
`fx_r0X`), cross-OS + leak-guarded. ? NEXT (optional): (1) M4 quality-floor on real fixtures;
(2) deferred video-name rename (before open-sourcing); (3) 01 protobuf / 02 key-gated. Detail
[[next-session-golden-fixtures]].
10     - [? Studio media lifecycle (ingest?store?annotate?train)](project-studio-media-
lifecycle.md) ? **STORAGE HALF COMPLETE 2026-07-01.** Full "add a video ? store in chosen medium
(S3/GCS/Drive/local) ? free-space checked ? appears in my videos" is END-T0-END: P2 engine free-
space (#407), P3 capabilities-storage (#408), P4 `POST /api/assets` (#409), P5 SPA medium picker
(khelsutra #137) ? all MERGED. Annotate-in-UI (P6-P9) already shipped. 5 screencasts (04 =
store-in-my-medium). **? ONLY owner-gated remains: P10/P11 (corpus promotion + train/reeval,
DEFERRED D13) + `L` beta follow-ups ? do NOT build without owner lifting the gate.** Doc
`khelsutra/docs/STUDIO_MEDIA_LIFECYCLE.md`; detail [[project-studio-media-lifecycle]].
11     - [Current state](current-state.md) ? **live micro-checkpoint** (updated every
checkpoint): open PRs, what just landed, next steps, open decisions. **Read this first.** Now
LIVE-only (handoff + today's checkpoints); kept read-first-short.
12     - [Current-state archive](current-state-archive.md) ? chronological checkpoint history
(2026-06-06 ? 06-18, 96 blocks) split out of current-state 2026-06-19. Deep history only; NOT
read each session.
13     - [Session handoff](session-handoff.md) ? current state · next steps · open decisions ·
ramp-up kit. AUTO-refreshed at meaningful checkpoints (PR merged, key d...

10     # Session handoff ? badminton-highlight-indexer (rename PENDING) + siblings: sports-
data-collector, rally-annotator, sports-obsreport
11
12     **Last updated:** 2026-06-25 (**review-automation + audit-completion session** ? see ?
You are here (2026-06-25) below. Maintenance/PR-review phase, NOT serving/alpha: 0 open PRs, all
CI green, no GCP VMs, PR-review watch loop OFF. The serving/alpha track below is UNCHANGED +
owner-gated.) Prior: 2026-06-22 (**M11+M12 serving-code session** ? owner: "build 3 then 4 then
we pair on the alpha (2)". **Both Claude-doable engine items DONE + merged:** **M11** data-
flywheel skeleton [#336](https://github.com/Khelsutra/badminton-highlight-indexer/pull/336)
(`334ad0f` ? default-OFF + consent FAKED-DENY, inert; reuses workspace/eval/promotion; NO
migration) + **M12** `gdrive-api://` OAuth StorageBackend
[#338](https://github.com/Khelsutra/badminton-highlight-indexer/pull/338) (`819e395` ?
idempotent put, lazy Google imports, injected-fake tests; live per-user OAuth owner-gated). Both
adversarially reviewed, full-suite+cross-OS green, merged on green, in an isolated worktree. **?
NEXT = pair with owner on the ALPHA GO-LIVE (option 2)** ? owner brings CF dashboard + box +
rotated Gemini key; the counsel ToS/DPA inputs (the 7-pt checklist) gate M11 *live* +
M9-consent. ? schema ladder drifted under me this session: v7=`locale`, v8=compute-picker ? the
future M9-consent migration is **v9** (check `PRAGMA user_version` before authoring). Prior
same-day: **maintenance / green-PR merge-sweep session** ? owner asked to merge the green PRs +
finish loose ends. 6 PRs now on master: worker dated-label fix **319**, nightly Cloud-Run
scheduler **320**, DATA_IN_GCS map **316**, doc **321**, gate-A litmus re-ground **322**,
golden-fixtures backlog **323**. engine `origin/master` = `9b37269`, suite **1428?**, **0 open
engine PRs**; docs-archive had no terminal candidate (owner-gated). Full per-PR detail =
[[current-state]] top. ? ~10 concurrent worktrees/sessions ? owner is trimming concurrency
before new work. The serving/alpha plan below is UNCHANGED. Prior **2026-06-21 ALPHA-SHAREABLE
session** ? Claude's half of "make it UI-driven + alpha-shareable" is **DONE**: 3 PRs merged ?
engine **294** exposure-safety boot posture + khelsutra **64** SPA `VITE_API_BASE` + **65**
deploy kit. **KEY CORRECTION:** B-P2 (SPA ingest screen) was ALREADY shipped (#56) ? alpha-
shareable was a DEPLOY/AUTH task, not an SPA build. Owner chose the **SPLIT** topology (SPA on
CF Pages + `api.` cloudflared tunnel + CF Access). Remaining = OWNER stand-up via
`khelsutra/deploy/DEPLOY_ALPHA.md`; then engine M11/M12. Full record [[ui-driven-cloud-serving-
gap]]). Prior: HUGE serving session ? M1?M9-auth shipped (#279?#291) + real M7 L4 run. **Repo is
under the `Khelsutra` GitHub org**.
13
14     > **Read order:** this file ? [[current-state]] top (dense per-checkpoint detail) ?
`docs/NEXT_STEPS.md` (the prioritized cross-track plan, refreshed 2026-06-21) ?
`docs/DOC_STATUS.md` (doc lifecycle/hygiene).
15
16     ## ? You are here (2026-06-25)
17     **Review-automation + audit-completion session.** engine `origin/master` = **`0b4f492`**
. all CI green . **0 open PRs** . no GCP VMs . **PR-review watch loop OFF** (cancelled). NOT
serving/alpha (that track is the "Earlier" block below, unchanged + owner-gated).
18     - **Repo tidy:** synced master, pruned ~92 stale local branches + 7 stale worktrees;
**fixed a corrupted (UTF-16-tail) `.gitignore` ? `artifacts/` ignored +
`KHELSUTRA_PRODUCT_OVERVIEW.md` tracked (**377**); owner un-hid the hidden `C:\U...

8      ---
9
10     # Current state ? updated continuously (see [[working-agreement-checkpoints]])
11
12     > **Scope of this file = LIVE only:** the current handoff + *today's* checkpoints + open
13     PRs/decisions. Keep it read-first-short (?1 page). Older checkpoints are archived in [[current-
14     state-archive]] ? when today's checkpoints age out (next clean-slate day), move them there,
15     don't let them pile up here.
16
17     ***? 2026-06-29 ? rally code-review fixes MERGED; P2b is the next pick-up. READ [[next-
18     session-rally-finding-b-promotion]].** A code-review of rally detection (done in a now-deleted
19     sibling clone) found 3 issues, all fixed + merged to `master` ***0c9c693*** (main clone was
20     `0b4f492` ? **pull first**): ***A** `_spread` ceil-fix (unconditional), **B**
21     `_trim_inactive_tail` temporal-density behind ***inactivity_temporal_density` (default-OFF,
22     zero-regression no-op)***, the `rally_seg_eval` A/B CLI (`--[vs-]inactivity-temporal-density`) ?
23     PRs ***394** + ***395***, collector-C skipped-row warning **sdc#50**. ? ***393 was CLOSED by a
24     branch-rename, not merged** ? #394 is the roll-forward ([[lesson-branch-rename-closes-open-
25     pr]]). ***? NEXT (owner-requested): P2b** ? GPU + golden labels + F:\ data are now LIVE ? run the
26     golden A/B at SERVED, **promote-or-reject** the flag (`promote_if_served_safe`, no
27     `tol_f1`/dual-set regression + a Launch Report), run the full suite incl. now-unlocked
28     GPU/golden paths, then a **GO/NO-GO launch-readiness report for owner signoff** (recommend,
29     don't decide). Runbook = `docs/RALLY_DETECTION_FIXES_PLAN.md` §8 Q2.
30
31     ***? SESSION WRAP ? 2026-06-23 (owner called a clean slate; out of budget, "human runs
32     the loop" until quota refresh). READ FIRST on return.**
33     - **THE WIN:** owner demoed a small clip ? highlights to a friend = ***"pure bliss."**
34     The whole cloud/serving/docs arc this session shipped + merged.
35     - **WHAT SHIPPED (all merged):** cloud compute-picker **validation method** (#341 ?
36     `result.compute.path` proves which backend ran + the GCP-verifiable Cloud Run execution;
37     `scripts/verify_compute_path.py`; live-proven cloud?cloud_run+22 rallies, local?in_process) .
38     async `/api/compile` (#339/#108) . #342 GOOGLE_CLOUD_PROJECT guard . user guide
39     ***`docs/CREATING_REELS.md`** (#343) . operator runbook
40     ***`docs/CONVERT_GCS_VIDEOS_TO_HIGHLIGHTS.md`** + committed `deploy/cloudrun/cloudbuild.yaml`
41     (#346) . ***`khelsutra/deploy/GPU_VM_SERVING.md`** (#113, owner-merged) = move the live engine
42     off the droplet onto an L4 GPU VM + cut the token-managed tunnel over, with a **Gemini?WASB
43     detection switch**. Droplet full-install suite GREEN (1461 passed).
44     - ***? OPEN THREADS for return (prioritized):** (1) *** [khelsutra
45     #114](https://github.com/avidullu/khelsutra/issues/114)** ? CF Access: an ALLOWLISTED guest
46     email still couldn't sign in (blocks sharing the alpha; likely the email isn't in the right
47     Access app's policy / selector-type / OTP delivery ? full triage in the issue). (2) Owner wants
48     a **DOC-CONSOLIDATION pass** (deferred ? budget). (3) Backlog (`docs/BACKLOG.md` ? *Batch /
49     declarative orchestration*): a **one-YAML `indexer --batch`** driver + a **one-shot GPU-VM
50     `serving-startup.sh`** (design hinge = secrets out of plaintext metadata ? Secret Manager). (4)
51     Make the cloud toggle live on the alpha (owner deploy ? GPU VM per #113, or the droplet stays).
52     - **STATE:** alpha LIVE on the droplet (CPU, `gemini` segmenter) at `api....

HEAD: 1f72c1c feat: configurable highlights item_noun (v0.1.3)
[/external_agent_tool_result]

26. assistant (2026-07-02T06:11:32.666Z)

All 5 repos are confirmed at remote head ? `behind=0 ahead=0` on every one:

Repo	Branch	HEAD
--- --- ---		
badminton-highlight-indexer	master	`e410136` (#413)
khelsutra	master	`f9eea14` (#140)
rally-annotator	main	`3d604bc` (#25)
sports-data-collector	master	`adcd206` (#53)
sports-obsreport	main	`1f72c1c` (v0.1.3)

Two notes: sports-data-collector still has its local WIP (modified `.gitignore` + an untracked nested directory) ? that doesn't affect sync and I'm leaving it untouched pending the audit's read-only inspection. The audit agents are reading these same trees, so they're now guaranteed to be auditing remote-head state.

The audit workflow is still running ? I'll present the prioritized plan for your approval when the verification passes finish.

<status>completed</status>
<summary>Dynamic workflow "Deep audit of all repos under khelsutra-guru: critical fixes + tech debt, adversarially verified" completed</summary>
<result>{"summaries":[{"finder":"engine:audit-doc-reconcile","repo":"badminton-highlight-indexer","summary":"Engine repo is healthy and fast-moving: master at e410136 (2026-07-02), 22 commits merged since 06-26, ~1500 tests, coverage ~85%, CI green on master (trusted). The per-project docs' own $7 trackers are remarkably accurate ? every ? claim I spot-checked (D13/ByteTrack #386, 01 Gemini GC #380, B1 #385, B2/P17 #378, B3/B6 config fixes) is verifiably true in code. The rot is concentrated in the INDEX layer (DOC_STATUS.md, docs/README.md, BACKLOG.md, NEXT_STEPS.md header), which lags reality by ~15 shipped PRs, and in two designed-but-unstarted regression tracks (M4 quality floor, decision-snapshot). The single biggest live debt: the main.py god-module split (D1/P10) is stalled ? PR #390 sits open and CONFLICTING since 06-26 while main.py grew 52% (1448?2198 lines) from 8 new endpoint PRs landing in it."}, {"finder":"engine:correctness","repo":"badminton-highlight-indexer","summary":"The engine is a ~2200-line god-module orchestrator (backend/main.py) over a well-factored worker/storage/compute substrate; master is current (HEAD e410136) and CI is trusted green with ~1500 tests. The async job plumbing (claim_due_job CAS + single-worker executor + single-instance DB lock) and the schema ladder (v9, idempotent ALTERs, backup-before-migrate, downgrade guard) are genuinely solid ? most crash-safety patterns hold up under scrutiny. The dominant hot-path debt is lifecycle, not logic: paid-segmenter idempotency is still missing (#340 open, confirmed at HEAD), remote-input scratch copies are never reclaimed anywhere (acquire_local_input mkdtemp-per-call, worst on /api/source where every browser Range request re-downloads the full remote video), and the packaged-app path story is inconsistent (upload_dir CWD-relative vs app-home-rooted output_dir; config output.output_dir dead on the CLI path). Cloud-serving has an owner-gated GPU cost leak (poll timeout never cancels the Cloud Run execution). Findings are 2xP1, 5xP2, 2xP3; only #340 is already tracked."}, {"finder":"engine:structure","repo":"badminton-highlight-indexer","summary":"Engine repo at master e410136 (current with origin, 2026-07-02). Backend is ~28.9k lines of Python across ~29k total; merge velocity is high (9 PRs touching main.py alone since 06-26). CI is green on master per audit ground rules. The dominant structural debt is the D1 god-module problem: backend/main.py is now 2,198 lines and grew +401 lines (+22%) in the six days since split PR #390 was opened ? that PR is now CONFLICTING and rotting. The transitional module-globals shim (extracted API modules re-importing backend.main at call time) creates a 3-module import cycle and keeps the two largest modules mypy-quarantined. Secondary debt: four more >800-line modules, duplicated Stage-2 AI-handoff logic across two live segmenter families,
```

and small hygiene items (7 tracked scratch/ scripts violating the repo's own convention, 4 stale remote branches). Notably, audit item D13 (ByteTrack -> trackers) is verified DONE ? no vendored ByteTrack directory exists and person_detector.py uses trackers.ByteTrackTracker; only a stale docstring remains."}, {"finder": "engine:ci-tests", "repo": "badminton-highlight-indexer", "summary": "Engine CI is healthy: master is 15/15 green (last red master push was 2026-06-24, fixed same day), the Tier-1 nightly (nightly.yml) has run green daily since it landed 2026-06-26 with zero nightly-failure issues ever opened, and 1558 tests collect cleanly. All jobs in both workflows carry per-job timeouts, local ruff 0.15.16 passes clean, and the coverage floor (70) is enforced in both the per-PR and nightly full-suite lanes. Debt is concentrated in four places: the ci.yml/nightly.yml copy-paste duplication tracked by #384 has now actually drifted (ci.yml gained a link-check lane on 06-30 that nightly never got, plus timeout divergence); PR #390 (the D1 god-module split) has sat OPEN with a red full-suite check since 06-26; roughly 27 of 1558 tests silently skip in CI (17 obsreport-gated, 2 reportlab/pypdf, 7 golden-data-gated by design, 1 platform) with no -ra visibility; and the mypy gate is environment-dependent (a misplaced type-ignore in backend/storage/gcs.py makes mypy fail on any box with google-cloud libs installed while CI stays green)."}, {"finder": "engine:security-config", "repo": "badminton-highlight-indexer", "summary": "Engine repo (Python, ~1500 tests, CI trusted green on master at e410136). Security/config posture is largely healthy: deploy/gcp/buckets.env single-source (#410) is properly wired into every deploy script, no literal secrets anywhere in the tree (grep for AIZA/sk-/ghp_/private keys = zero), redaction and edge-auth (CF Access JWT, default-off) are carefully built, startup exposure checks (M9) cover jail/team+AUD/auth-extra/host-allowlist, CI has copyleft license-fail lanes and no pull_request_target/secrets usage, and .gitignore is UTF-8 with artifacts/, output/, *.db all ignored and untracked. Remaining debt clusters in four places: a wildcard CORS default that undermines the localhost-appliance DNS-rebinding guard, the still-open #327 path-jail-vs-gs:// ingest gap, supply-chain pinning (mutable git tag duplicated in 5 files, no lockfile), and small hygiene items (tracked scratch/ files, retired-D0 deploy dir still live-coupled)."}, {"finder": "khelsutra:code", "repo": "khelsutra (avidullu/khelsutra) ? SPA web/ + marketing site/", "summary": "The khelsutra repo is in good code health: the web/ SPA is strict-TS (strict + noUnusedLocals/Parameters, web/tsconfig.json:17-20), has 29 test files with a CI-enforced ratcheted coverage floor (statements 92 / branches 87 / functions 84 / lines 92, web/vite.config.ts), and components stay small (largest is App.tsx at 417 lines; the just-landed VideoLibrary.tsx is 101 lines). CI (3 jobs: site tests, web typecheck+coverage+build, real-browser layout/render/all) is green on master (run 28532935786). i18n key parity is perfect ? 473 keys in all 6 locales, 0 missing/0 extra, guarded by locales-drift + hygiene tests ? and the vendored rally-annotator core is byte-in-sync with upstream HEAD (3d604bc). API client vs engine: every endpoint the SPA calls exists on the engine with matching shapes; no contract drift found. The real debt is at the seams: the engine's vendored SPA bundle is 8 feature-PRs stale (built 2026-06-22 vs SPA source 2026-07-01), and the deploy docs (DEPLOY_ALPHA.md \Status: LIVE\, NEXT_STEPS.md) still present the droplet retired 2026-06-25 as live infrastructure."}, {"finder": "khelsutra:issues-triage", "repo": "khelsutra (avidullu/khelsutra)", "summary": "TS/React SPA (web/) + marketing site (site/), ~140 merged PRs, CI green on master (last 5 runs success, ~1.5 min each). All 10 open issues triaged against current code: 6 are still fully valid feature/UX work (#72 #98 #99 #102 #111 #112), 2 are partially fixed but the issue text is now stale (#101 ? async compile #329 removed the 524 at source; #103 ? name-on-reload and fps/resolution landed via #127/#140), and 2 describe infrastructure that no longer exists (#97 #114 ? the D0 droplet alpha was retired 2026-06-25, alpha is paused pending the Cloud Run move). Separately, three repo docs (NEXT_STEPS.md refreshed 2026-07-01, deploy/DEPLOY_ALPHA.md, docs/LOCAL_APPLIANCE_ARCHITECTURE.md) still claim the retired droplet deployment is LIVE ? the most actionable doc-rot found. Overall debt is low-to-moderate: the codebase is disciplined and well-commented; the debt is concentrated in the processing-UX cluster (#98/#99/#111) and stale alpha-infra threads."}, {"finder": "sdc:audit", "repo": "sports-data-collector", "summary": "Small, healthy Python repo (~5.5k LOC in src/, ~250 test functions across 24 files) at Khelsutra/sports-data-collector, master = addcd206 (PR #53, busy_timeout). CI is green (last 8 runs all success, ~20s each) but is pytest-only: no ruff/mypy/coverage gate, and default ruff currently reports 24 err ... (truncated 310440 chars, full result in C:\Users\avidu\AppData\Local\Temp\claude\C--Users-avidu-Projects-badminton-highlight-indexer\c1fcb4aa-537d-41fd-858e-53f93349bf5a\tasks\wwi2c0w2d.output)</result><usage><agent_count>60</agent_count><subagent_tokens>3577707</subagent_tokens><tool_uses>1042</tool_uses><duration_ms>1650167</duration_ms></usage></task-notification>

The audit workflow finished ? 60 agents, ~1,042 tool calls. The result is large, so let me extract the verified findings from the output file.

<status>completed</status>  
<summary>Dynamic workflow "Adversarially verify the unique high-severity findings dropped from  
round-1 verification" completed</summary>  
<result>[{"claim":"Content script runs a 3 Hz full-DOM shadow-piercing scan on every page the  
user visits, even with the panel hidden","repo":"rally-  
annotator","verdict":{"verdict":"CONFIRMED","reasoning":"Every element of the claim reproduces  
in the current working tree (rally-annotator @ main 3d604bc, clean):\\n\\n(1) Runs on every page:  
web/entrypoints/content.ts:13 `matches: [\\"&lt;all_urls&gt;\\"]` (top frame only per line 16),  
and web/wxt.config.ts:13 `host_permissions: [\\"&lt;all_urls&gt;\\"]`. content.ts:32-44  
unconditionally calls `mountPanel(...)` then `panel.toggle()` ? the panel starts hidden  
(display:none) but stays mounted.\\n\\n(2) 3 Hz loop regardless of visibility:  
web/src/ui/panel.ts:376 `const clock = window.setInterval(render, 333);` starts at mount and is  
cleared only in `destroy()` (panel.ts:395), which is never called from production code ? only  
from web/test/panel.smoke.test.ts. `toggle()` (panel.ts:391-393) merely flips display:none; it  
does not pause the interval.\\n\\n(3) Each tick triggers a full-DOM shadow-piercing scan on video-  
less pages: render() calls `video.now()` (panel.ts:264) ? `active()`  
(web/src/video/directVideo.ts:55-58) ? `findActive()` ? `collectVideos(document, ...)`  
(directVideo.ts:37-39), which does `root.querySelectorAll("\\video\\")` plus  
`root.querySelectorAll("\\*\\")` with a per-element `chrome.dom.openOrClosedShadowRoot` call,  
recurring into every shadow root to depth 8 (directVideo.ts:25-32, 13-23). Crucially, when no  
video exists, `this.current` is set to null (directVideo.ts:40-43), so the cache NEVER fills and  
every 333 ms tick repeats the full scan. Each tick also rewrites the hidden panel's DOM  
(status.innerHTML, list.replaceChildren, panel.ts:265-281).\\n\\n(4) No fix landed: git log for  
content.ts/panel.ts/directVideo.ts shows only ad6ac9c (initial), 5ec1831 and 0a05ecf (i18n) ? no  
gating change. No visibilitychange/IntersectionObserver/MutationObserver/activeTab anywhere in  
web/ (grep: only hit is the setInterval itself).\\n\\n(5) Intent: `&lt;all_urls&gt;` is deliberate  
(DESIGN.md LD-7: panel hidden by default, icon is the explicit `\\\"annotate this page\\\"` gesture) ?  
but LD-7 gates only the UI, not the scan loop, so the perf cost contradicts the design's own  
`\\\"not intrusive\\\"` rationale.,"corrected_severity":"P2","corrected_effort":"S","notes":"Sharper  
failure scenario: user installs the extension and opens ordinary video-less pages
```

(Gmail/Docs/GitHub ? tens of thousands of DOM nodes, many shadow roots). In every such tab, every 333 ms, forever, the content script walks the entire DOM (`querySelectorAll("\*")`) and makes one chrome.dom.openOrClosedShadowRoot call per element ? continuous per-tab CPU burn and laptop battery drain, plus jank on heavy pages, with the panel never once opened. Cost scales with number of open tabs. On pages WITH a video the cache (directVideo.ts:55-57) makes ticks cheap, so the pathological case is precisely the "every other page" case the finder described.

Severity P2 not P1: no correctness/data-loss/security impact, and the extension is version 0.1.0/private (not store-published), so blast radius today is dev machines; would be P1 if shipped broadly.

Correctly-scoped fix (S): (a) don't start the 333 ms clock until the panel is first shown and pause/clear it when hidden ? gate it inside `toggle()` in panel.ts; (b) make render's clock read non-scanning (e.g. a `peekNow()` on DirectVideoHandler that uses only the cached element), keeping the full scan for explicit triggers (Refresh button, panel open). Optional follow-up (M, separate decision): replace the `&all\_urls` content script with activeTab + scripting.executeScript on icon click, which eliminates injection on every page entirely and drops the broad host permission ? aligns with LD-7's own rationale, worth raising but not required to fix the perf debt. Not OWNER_GATED ? pure code change, no spend or product pivot.

Locked decision LD-i8 (web language persisted + seeded from browser language) is documented as shipped but not implemented ? panel always boots in English and forgets the choice on reload, "repo": "rally-annotator", "verdict": {"verdict": "CONFIRMED", "reasoning": "Doc claims shipped: rally-annotator/docs/LOCALIZATION.md:55-57 (LD-i8: \"Web: persisted in chrome.storage.local (seeded from the browser language; default en)\") and :99-100 mark the web i18n phases done (PR #18 \"selector\", PR #19); web/README.md:22-23 says \"persisted in-panel language selector\". Code says otherwise: (1) web/src/i18n/index.ts:56 boots the module-level locale to DEFAULT_LOCALE (\"en\") ? a fresh content-script injection always starts English; (2) negotiateLocale (index.ts:72-80), which implements the stored?navigator.languages?en order, has ZERO runtime callers ? grep across web/ shows its only callers are unit tests (web/test/i18n.test.ts:47-52); (3) panel.ts:18 declares onLocaleChange with the comment \"optional: persist the choice (content script wires this)\", but the actual mountPanel call in web/entrypoints/content.ts:32-42 passes only annotator/video/identity/download ? onLocaleChange is never wired, so the change handler at panel.ts:306-311 updates only the in-memory `current`; (4) no storage read/write of any language key exists anywhere: persist/store.ts handles only \"rally:\"-prefixed rows, background.ts (all 27 lines) handles only downloads and icon clicks. Git: repo is at origin/main (3d604bc); no commit after 0a05ecf (#19) touches web locale persistence ? 3d604bc (\"docs: sync READMEs, multi-agent audit fixes\") actually re-affirmed the false \"persisted\" README claim. The E2E (web/e2e/extension.spec.ts:80-101) switches the locale within one page session and never reloads, so it can't catch this. Failure scenario: a Hindi rater (browser hi-IN) opens a video ? panel boots in English despite the \"seeded from browser language\" claim; they select ?????; on the next page load/navigation the panel is English again and the choice must be re-made on every video.

\"corrected_severity\": \"P2\", \"corrected_effort\": \"S\", \"notes\": \"Claim verified exactly as stated; not OWNER_GATED (LD-i8 is already the locked decision ? this is pure implementation). Sharper framing: both halves of LD-i8-web are missing (no boot-time seeding AND no persistence), yet all plumbing already exists and is tested, which is why the fix is S: in content.ts main(), read e.g. `lang` from browser.storage.local, call setLocale(negotiateLocale(stored, navigator.languages)) before mountPanel, and pass onLocaleChange: (l) => void browser.storage.local.set({ lang: l }); add a unit test for the wiring and extend the Playwright E2E with a reload-persists-locale assertion (the current per-locale E2E never reloads, which is the coverage gap that let the docs drift). Scope note: the VLC half of LD-i8 (config-file persistence, PRs #20/#21) was not part of this claim and was not verified either way. Severity P2: no data loss/crash, but a locked decision is documented and README-advertised as shipped while absent ? it defeats the localization value prop for the target hi/kn/te raters (English boot every page load) and the doc-sync commit 3d604bc propagated the false claim.\"}, {\"claim\": \"Collector pins obsreport as a plain PyPI requirement while the name is unclaimed on PyPI ? dependency-confusion window and install broken today\", \"repo\": \"sports-data-collector\", \"verdict\": {\"verdict\": \"CONFIRMED\", \"reasoning\": \"(1) Bare PyPI-style pin exists in current tree: C:/Users/avidu/Projects/khelsutra-guru/sports-data-collector/pyproject.toml:38-40 ? `report = [\"obsreport\";=0.1.3\"]`, with the comment at lines 32-37 itself admitting the intended form is a git+ssh direct reference. (2) Name is unclaimed on PyPI today (2026-07-02): https://pypi.org/pypi/obsreport/json returns 404, and `pip index versions obsreport` returns \"ERROR: No matching distribution found for obsreport\" (personally observed). (3) The private package really is named `obsreport` (sports-obsreport/... on every page the user visits, even with th
REASONING: Every element of the claim reproduces in the current working tree (rally-annotator
@ main 3d604bc, clean):
```

(1) Runs on every page: web/entrypoints/content.ts:13 `matches: ["<all\_urls>"]` (top frame only per line 16), and web/wxt.config.ts:13 `host\_permissions: ["<all\_urls>"]`. content.ts:32-44 unconditionally calls `mountPanel(...)` then `panel.toggle()` ? the panel starts hidden (display:none) but stays mounted.

(2) 3 Hz loop regardless of visibility: web/src/ui/panel.ts:376 `const clock = window.setInterval(render, 333);` starts at mount and is cleared only in `destroy()` (panel.ts:395), w

NOTES: Sharper failure scenario: user installs the extension and opens ordinary video-less pages (Gmail/Docs/GitHub ? tens of thousands of DOM nodes, many shadow roots). In every such tab, every 333 ms, forever, the content script walks the entire DOM (`querySelectorAll("\*")`) and makes one chrome.dom.openOrClosedShadowRoot call per element ? continuous per-tab CPU burn and laptop battery drain, plus jank on heavy pages, with the panel never once opened. Cost scales with number of open tabs. On pages WITH a video the cache (directVideo.ts:55-57) makes ticks cheap, so the pathological case is precise

```
=== CONFIRMED [P2/S] rally-annotator | Locked decision LD-i8 (web language persisted + seeded
from browser language) is documented as shipp
```

REASONING: Doc claims shipped: rally-annotator/docs/LOCALIZATION.md:55-57 (LD-i8: "Web: persisted in chrome.storage.local (seeded from the browser language; default en)") and :99-100 mark the web i18n phases done (PR #18 "selector", PR #19); web/README.md:22-23 says "persisted in-panel language selector". Code says otherwise: (1) web/src/i18n/index.ts:56 boots the module-level locale to DEFAULT_LOCALE ("en") ? a fresh content-script injection always starts English; (2) negotiateLocale (index.ts:72-80), which implements the stored?navigator.languages?en order, has ZERO runtime callers ? grep across web/ s

NOTES: Claim verified exactly as stated; not OWNER_GATED (LD-i8 is already the locked decision ? this is pure implementation). Sharper framing: both halves of LD-i8-web are missing (no boot-time seeding AND no persistence), yet all plumbing already exists and is tested, which is why the fix is S: in content.ts main(), read e.g. `lang` from browser.storage.local, call setLocale(negotiateLocale(stored, navigator.languages)) before mountPanel, and pass onLocaleChange: (l) => void browser.storage.local.set({ lang: l }); add a unit test for the wiring and extend the Playwright E2E with a reload-persists-l

=== CONFIRMED [P2/S] sports-data-collector | Collector pins obsreport as a plain PyPI requirement while the name is unclaimed on PyPI ? dependenc

REASONING: (1) Bare PyPI-style pin exists in current tree: C:/Users/avidu/Projects/khelsutra-guru/sports-data-collector/pyproject.toml:38-40 ? `report = ["obsreport>=0.1.3"]`, with the comment at lines 32-37 itself admitting the intended form is a git+ssh direct reference. (2) Name is unclaimed on PyPI today (2026-07-02): <https://pypi.org/pypi/obsreport/json> returns 404, and `pip index versions obsreport` returns "ERROR: No matching distribution found for obsreport" (personally observed). (3) The private package really is named `obsreport` (sports-obsreport/pyproject.toml:6, version 0.1.3, tag v0.1.3 exi

NOTES: Severity calibrated down from an implied P1: the exposure is real but narrow. `report` is an optional extra; the base install is unaffected; the collector treats obsreport as a soft dependency that no-ops when absent (sports-data-collector/src/reporting/__init__.py:15-22); and CI installs only `[dev]` (.github/workflows CI line 19), so no automated pipeline ever resolves the bare name ? the confusion window only fires when a human/agent runs `pip install .[report]` in a fresh en...

<status>completed</status>
<summary>Dynamic workflow "Author 13 isolated cleanup PRs (sdc data-safety, engine correctness, doc reconcile) with adversarial review" completed</summary>
<result>[{"item":"sdc-gitignore","pr":54,"branch":"docs/gitignore-artifact-bundles-decision","worktree":"C:/Users/avidu/AppData/Local/Temp/claude/C--Users-avidu-Projects-badminton-highlight-indexer/c1fcb4aa-537d-41fd-858e-53f93349bf5a/scratchpad/wt-gitignore-artifacts","summary":"R1-39 resolved via the documentation route: evidence (ADR-008 \"Owned-model topology\" at badminton-highlight-indexer/docs/archives/decisions/DECISIONS.md:388 and the indexer's docs/CODE_MAP.md §0 placement table) is decisive that model-artifact bundles live at artifacts/<name> in the INDEXER repo (manifest committed, weights gitignored), with the Gen-2 split pre-committed to a NEW repo (sports-temporal-models) ? never sports-data-collector, whose ADR-008 role is the data feed (curate export ? data/eval_export*, already ignored). PR #54 therefore adds NO ignore pattern: it appends a 14-line comment block to .gitignore (matching the file's existing commented-section style) recording the decision, why the stale hunk's blanket 'artifacts/' was wrong (it would hide the manifest.json its own comment declared reviewable; it cited an ADR unresolvable in-repo), and the correct un-ignore recipe (artifacts/** + !artifacts/**/ + !artifacts/**/manifest.json) if bundles ever land here. Authored fresh from origin/master in an isolated worktree; commit ab6f68b is the only commit on origin/master..HEAD.", "author_notes": "1) The main checkout (C:/Users/avidu/Projects/khelsutra-guru/sports-data-collector) STILL carries the stale WIP .gitignore hunk (' M .gitignore' on master) ? deliberately left untouched per the brief; the orchestrator should discard it (git checkout -- .gitignore) after merging PR #54, as noted in the PR body. 2) sports-data-collector has no CLAUDE.md (checked; only README + docs/), so no repo-local conventions beyond commit-history style (conventional commits, which I matched with docs(gitignore): ...). 3) A sibling worktree wt-curate-verify (branch fix/curate-verify-registry-rot) exists on the same scratchpad from another task ? untouched by me. 4) Related latent issue NOT in my scope: the indexer repo has the same contradiction (its .gitignore:53 ignores artifacts/ wholesale while docs/CODE_MAP.md:35 says 'manifest committed'; git ls-files artifacts/ is empty) ? the verifier notes flag it; a separate fix there would make ADR-008's provenance surface real. 5) Worktree preserved as instructed; PR not merged.", "review_verdict": "clean", "review_findings": [], "folded": null}, {"item":"sdc-curate-verify","pr":55,"branch":"fix/curate-verify-registry-rot","worktree":"C:/Users/avidu/AppData/Local/Temp/claude/C--Users-avidu-Projects-badminton-highlight-indexer/c1fcb4aa-537d-41fd-858e-53f93349bf5a/scratchpad/wt-curate-verify","summary":"Fixes R2-6 + critic #1 in Khelsutra/sports-data-collector (PR #55). (1) New `curate verify` subcommand (src/cli/curate.py): resolves every registered videos.local_path, reports dangling rows in a tabulated report, --strict exits 1, --sport/--status filters; structured VerifyReport core for library/test use; README §7 documents it. (2) Re-pointed 2 of the 6 owned golden rows to disk-verified locations: adarsh_avi_singles -> 'G:\\My Drive\\Sharing\\Badminton\\Boxhill\\June 1 2026\\Adarsh and Avi.MP4' (ffprobe 1080p@59.94, duration 1409.4s vs last label 1405.8s) and mahadevpura_singles -> 'G:\\My Drive\\Sharing\\Golden Annotations\\MahadevpuraSingles.MP4' (1080p@29.97, 447.7s vs last label 399.4s; size matches documented 187MB). The other 4 (kushagra_singles, largetest_doubles, gbaaddy, testlarge_short) exist ONLY on the unmounted F: archive ? left dangling deliberately and flagged in the PR body. (3) Committed the rewritten binary sqlite data/sports_metadata.db: purged the staging_match_non_comm demo placeholder row (recreatable from committed sample CSV), cleared shuttleset_12's fake 'watch?v=example' URL to NULL (kept its 79 real rallies), VACUUMed; 31 -> 30 rows. 9 new tests in tests/test_verify.py.", "author_notes": "Deviations/judgment calls: (a) Brief said check C: then F:; F: is NOT mounted (Get-PSDrive: only C:, G:, Temp), and 'khelsutra-guru/Annotation Setup/Golden Labelled' holds only the .rallies.csv labels ? but a recursive filename search found verified copies of 2 of the 6 on G: (Google Drive File Stream), which I ffprobe-matched against DB fps/resolution and golden-label durations before re-pointing. No persisted MD5s of the originals exist anywhere, so identity rests on filename+fps+resolution+label-span consistency (all exact); noted in the PR body. These are Drive-stream paths ? content downloads on demand; export md5 of the 10.7GiB file will be slow. (b) 4 rows remain dangling (F:-only per DATA_IN_GCS.md §5/§6) ? flagged in PR body; when F: is
```

mounted: verify, hash, re-point (and consider the S6 Phase-2 GCS migration). (c) shuttleset_12 was 'marked' (fake URL -> NULL) not purged ? it carries 79 real ShuttleSet annotations; staging_match_non_comm was purged (pure demo fixture). (d) Pre-existing my_custom_local_match row is also dangling (README demo row) ? left as-is, out of scope. (e) The untracked data/eval_export/manifest.json in the MAIN checkout still holds dead paths ? re-run `curate export` after merge. (f) Main checkout's dirty .gitignore (sibling WIP) untouched; all work done in the isolated worktree; branch cut from origin/master; origin/master..HEAD contains only my commit. Worktree left in place as instructed.", "review_verdict": "n/a", "review_findings": [], "folded": null}, {"item": "sdc-roora-archive", "pr": 56, "branch": "chore/roora-golden-labels", "worktree": "C:/Users/avidu/AppData/Local/Temp/claude/C--Users-avidu-Projects-badminton-highlight-indexer/c1fcb4aa-537d-41fd-858e-53f93349bf5a/scratchpad/wt-roora-goldens", "summary": "R2-7 fixed in two halves. (A) GCS archive: uploaded the Roora pilot record to gs://khelsutra-rally-corpus/archive/roora-pilot-review-20260606/ ? 739 objects, 5,731,641 bytes, verified byte-for-byte (remote ls -r listing diffed identical to local staging; du -s matches exactly). Contents mirror the 'Annotation Setup/' relative layout: Archive/'Roora Pilot Review - 6 June 2026/' minus Annotation Videos/ (5,626,913 B: 711 badminton CVAT frame XMLs + instances_Test.json + annotations.xml, 3 pickleball zips, 3 tabletennis zips, review MD/PDFs, annotation brief + illustrated guide, Feedback/), Trajectories/roora/ (100,843 B incl. pb/tt goldens + parse reports), golden_labels_badminton.csv (2,508 B), rally_review.csv (1,377 B, found at 'Annotation Setup/rally_review.csv'). No videos uploaded (Drive copies exist per audit). gcloud account verified = avi.dullu@gmail.com. (B) PR #56 on Khelsutra/sports-data-collector: new data/golden_labels/ with verbatim copies of golden_labels_badminton.csv + pickleball_rallies.csv + tabletennis_rallies.csv (the TT-0.909/PB-0.308 backing goldens), a provenance README pointing at the GCS archive URI, and tests/test_golden_labels_data.py pinning that pb/tt load via load_canonical_csv with zero skipped rows and the badminton human corrections (rally 2 start 29.000, rally 7 end 98.000, missed rallies 7.5/16.5) stay intact. Repo convention honored: no CLAUDE.md/CODE_MAP exists in sdc; .gitignore documents that small source annotation CSVs are version-controlled under data/ (precedent: data/roora_badminton_canonical.csv, data/validation/).", "author_notes": "Deviations/for the merger: (1) Total upload is ~5.7 MB, not the brief's ~3 MB estimate ? still entirely label/annotation/review artifacts; the delta is the 711 per-frame CVAT XMLs + review PDFs. Zero videos uploaded (the 3 pilot videos have byte-identical Drive copies per the audit verifier). (2) Upload incident worth knowing: the first recursive gcloud cp silently dropped 4 files (both root PDFs, the P&T review MD, the P&T feedback PDF) because their staged paths in the deep scratchpad exceeded Windows MAX_PATH=260 ? gcloud reported nothing in the tail output. Detected via local-vs-remote list diff, fixed ...
