1. user (2026-07-02T06:11:32.663Z)

Hi. Can you work in the khelsutra-guru folder instead of badminton-highlight-indexer?

2. assistant (2026-07-02T06:11:32.663Z)

Got it ? switching to `khelsutra-guru`. Per your repo-freshness convention, let me pull it first before reading anything.

3. assistant (2026-07-02T06:11:32.663Z)

```
[external_agent_tool_call: Bash]

7. assistant (2026-07-02T06:11:32.663Z)

`khelsutra-guru` is a parent folder holding several sub-repos, not a git repo itself. Let me see which subfolders are actual git repos.

8. assistant (2026-07-02T06:11:32.663Z)

```
[external_agent_tool_call: Bash]
description: Identify which subfolders are git repos
command: for d in */; do if [ -d "$d/.git" ]; then echo "GIT: $d"; else echo "    : $d"; fi;
done
[/external_agent_tool_call]
```

9. assistant (2026-07-02T06:11:32.664Z)

```

[/external_agent_tool_result]
```

10. assistant (2026-07-02T06:11:32.664Z)

There are several git repos here. There's also a `start-here-tmp.txt` at the root. Let me read it for context.

11. assistant (2026-07-02T06:11:32.664Z)

```
[external_agent_tool_call: Read]
file: C:\Users\avidu\Projects\khelsutra-guru\start-here-tmp.txt
[/external_agent_tool_call]
```

12. assistant (2026-07-02T06:11:32.664Z)

```
[external_agent_tool_result]
1      We're closing out the rally-detection quality work ? specifically P2b: the golden-corpus
2      promotion decision for the "finding-B" rally-end density fix ? and then producing a
3      launch-readiness signoff for me to approve.
4
5      WHERE TO WORK
6      - Use the clone at C:\Users\avidu\Projects\badminton-highlight-indexer (NOT any
7      khelsutra-guru\... nested path ? that clone was deleted).
8      - FIRST: `git fetch origin && git pull --ff-only` on master so you're at remote HEAD.
9      master already contains: PR #394 (fixes A+B), #395 (the A/B CLI), and the collector
10     fix. Then branch off origin/master for any change (one PR, no stacking).
11     - GPU + WSL, the golden labels/videos/trajectory CSVs, and the F:\ data drive are ALL
12     live on this machine now ? so the real-video / golden / GPU test paths that used to be
13     owner-only are runnable this session. Locate the golden manifest + features (likely on
14     F:\ or under .\output); confirm the actual paths before running ? don't assume
defaults.
15
16     RAMP UP (read before touching code)
17     - docs/RALLY_DETECTION_FIXES_PLAN.md ? $7 tracker (P2a ? done, P2b pending) and $8 Q2
18     has the exact A/B runbook + decision rule. This is the source of truth.
19     - docs/RALLY_DETECTION_CODE_REVIEW.md ? the original 3 findings (A/B/C).
20     - docs/HOW_RALLY_DETECTION_WORKS.md, docs/CODE_MAP.md ? mental model + navigation.
```

```

21 - Code anchors: backend/pipeline/detectors/tracknet_runner.py::_trim_inactive_tail
22 (the fix, gated on `temporal_density`); backend/config/models.py
23 (`inactivity_temporal_density: bool = False` ? the flag to flip); backend/eval/
24 rally_seg_eval.py::_build_preset (+ the --[vs-]inactivity-temporal-density CLI flags);
25 backend/eval/windowing.py (WindowingPreset carries the flag);
backend/eval/promotion.py
26 ::promote_if_served_safe (the formal served-safety gate).
27
28 WHAT FINDING B IS / WHY THE FLAG
29 - _trim_inactive_tail's R4 rally-end trim measured "fast-frame density" over the count
of
30 active SAMPLES, so under sparse shuttle tracking one fast sample after a tracking gap
31 read as 100% dense and held the rally tail open (inflated end). The fix uses the
32 trailing window's TEMPORAL length instead. It is a NO-OP under dense tracking, so it
33 only moves on clips where the tracker actually drops out. R4 is default-ON in prod, so
34 the fix shipped behind `inactivity_temporal_density` (default-OFF) = a zero-regression
35 no-op until measured. P2b is that measurement + the promote/reject decision.
36
37 P2b PROCEDURE
38 1. Ensure golden features exist (regenerate if needed; GPU/WSL):
39 python -m backend.eval.fusion_golden --manifest <golden_manifest.json> --out-dir
<features_dir>
40 2. Run the A/B at the SERVED operating point (flag OFF vs ON):
41 python -m backend.eval.rally_seg_eval --manifest <golden_manifest.json> \
42 --features-dir <features_dir> --preset served --vs served \
43 --vs-inactivity-temporal-density --iou 0.5
44 Headline metric = tol_f1 (R2 tolerance-match F1); also inspect |?end| / rally-end
45 precision and the paired sign-test + CI delta. Apply promote_if_served_safe
46 (served_regress_eps=0.0 ? no served-mean drop allowed).
47 3. DECIDE:
48 - If tol_f1 does NOT regress (neutral or better) at SERVED ? PROMOTE: flip
49 IndexingConfig.inactivity_temporal_density default to True (one-line change) + a
test
50 update; open one PR.
51 - If it regresses ? DO NOT promote: leave the flag OFF (the dormant code stays), and
52 record the numbers as the rejection rationale.
53 Either way: update docs/RALLY_DETECTION_FIXES_PLAN.md §7 (flip P2b to ? DONE or mark
54 REJECTED with the measured deltas) and follow docs/DOC_STATUS.md to honestly update ?
55 archive the plan doc (P1, P2a already done; P2b is the last open row).
56
57 FULL VALIDATION (for my signoff)
58 - Run the complete offline suite: python run_all_tests.py (expect ~1487+ passing).
59 - Now that GPU...
[/external_agent_tool_result]

```

13. assistant (2026-07-02T06:11:32.664Z)

Quick note before I dig in: `khelsutra-guru` isn't a single repo ? it's a parent folder containing several git repos:

- `**khelsutra/**` ? the product SPA/frontend (the one your memory's khelsutra PRs reference)
- `**badminton-highlight-indexer/**` ? a **nested** clone of the engine (note: your `start-here-tmp.txt` here says to use `C:\Users\avidu\Projects\badminton-highlight-indexer` and that nested clones were "deleted" ? but one exists again, modified today)
- `**sports-data-collector/**`, `**rally-annotator/**`, `**sports-obsreport/**` ? other git repos
- `**Annotation Setup/**`, `**khelsutra-screencast/**` ? non-git folders

So "work in khelsutra-guru" needs a target. Which do you want?

14. assistant (2026-07-02T06:11:32.664Z)

[external_agent_tool_call: AskUserQuestion]

```

input: {"questions":[{"question":"Which repo under khelsutra-guru should I work
in?","header":"Target repo","multiSelect":false,"options":[{"label":"khelsutra
(SPA)","description":"The product SPA/frontend ? the repo your khelsutra PRs (#88, #117, etc.)

```

```
live in."},{ "label": "badminton-highlight-indexer", "description": "The nested engine clone here.
Note: your start-here-tmp.txt flags nested clones as deleted/stale ? may not be the canonical
checkout."}, {"label": "sports-data-collector", "description": "The collector repo (sdc PRs, e.g.
#50)."}, {"label": "Just cd there, no task yet", "description": "Treat khelsutra-guru as the working
area; I'll wait for you to point me at a specific repo/task."}]}}}
[/external_agent_tool_call]
```

15. assistant (2026-07-02T06:11:32.664Z)

```
[external_agent_tool_result]
Your questions have been answered: "Which repo under khelsutra-guru should I work in?"="Can you
keep khelsutra-guru as the root directory and based on tasks in sessions you switch to the right
one as needed but also have access to all other repos so that you can have a full view of the
code and details?". You can now continue with these answers in mind.
[/external_agent_tool_result]
```

16. assistant (2026-07-02T06:11:32.664Z)

Perfect ? that works well. I'll treat `**C:\Users\avidu\Projects\khelsutra-guru**` as the root, keep all sub-repos accessible for a full-codebase view, and switch into whichever one a given task touches.

Let me get a quick lay of the land ? branch + freshness for each git repo (safe ff-only pull per your convention):

17. assistant (2026-07-02T06:11:32.664Z)

```
[external_agent_tool_call: Bash]
description: Orient and ff-pull each git repo under khelsutra-guru
command: cd /c/Users/avidu/Projects/khelsutra-guru
for d in khelsutra badminton-highlight-indexer sports-data-collector rally-annotator sports-
obsreport; do
  echo "=== $d ==="
  git -C "$d" fetch origin --quiet 2>&1 | head -2
  echo "branch: $(git -C "$d" branch --show-current) HEAD: $(git -C "$d" log --oneline -1
2>&1)"
  echo "status:"; git -C "$d" status -sb 2>&1 | head -4
  echo "ff-pull:"; git -C "$d" pull --ff-only 2>&1 | head -3
  echo
done
[/external_agent_tool_call]
```

18. assistant (2026-07-02T06:11:32.664Z)

```
[external_agent_tool_result]
=== khelsutra ===
branch: master HEAD: ca8bfcc docs(deploy): consolidate GPU_VM_SERVING.md ? rebase cleanup
(#119)
status:
master...origin/master
ff-pull:
Already up to date.

=== badminton-highlight-indexer ===
branch: master HEAD: 43578a7 chore(gcp): teardown.sh accepts RALLY_VM_NAME (align with
create_gpu_vm.sh) (#392)
status:
master...origin/master [behind 4]

Fast-forward
  backend/config/models.py
| 10 ++
```

```
=== sports-data-collector ===
branch: master HEAD: a152cf5 fix(cvat): warn on rows silently skipped by load_canonical_csv
(#50)
status:
master...origin/master
M .gitignore
?? sports-data-collector/
ff-pull:
Already up to date.
```

```
=== rally-annotator ===
branch: main HEAD: 3d604bc docs: sync READMEs with current state (multi-agent audit fixes)
(#25)
status:
main...origin/main
ff-pull:
Already up to date.
```

```
=== sports-obsreport ===
branch: main HEAD: 1f72c1c feat: configurable highlights item_noun (v0.1.3)
status:
main...origin/main
ff-pull:
Already up to date.
[/external_agent_tool_result]
```

19. assistant (2026-07-02T06:11:32.664Z)

All set. `khelsutra-guru` is now my root, all five git repos are fresh, and I have the full tree visible. Snapshot:

```
| Repo | Branch | HEAD | State |
|---|---|---|---|
| **khelsutra** (SPA) | master | `ca8bfcc` consolidate GPU_VM_SERVING.md (#119) | clean, up to
date |
| **badminton-highlight-indexer** (engine) | master | `39dff1d` | ff-pulled +4 (picked up the
finding-B `models.py` config) |
| **sports-data-collector** | master | `a152cf5` cvat warn fix (#50) | up to date; pre-existing
dirty `.gitignore` + untracked `sports-data-collector/` (not mine ? left alone) |
| **rally-annotator** | main | `3d604bc` README sync (#25) | up to date |
| **sports-obsreport** | main | `1f72c1c` configurable item_noun v0.1.3 | up to date |
```

Two things worth flagging:

1. **Duplicate engine checkout.** There's a `badminton-highlight-indexer/` here *and* the standalone one at `C:\Users\avidu\Projects\badminton-highlight-indexer`. Your `start-here-tmp.txt` in this folder explicitly says to use the standalone one and that nested clones were "deleted" ? but this nested one is alive and I just pulled it to `39dff1d`. They can drift. When a task touches the engine, tell me which checkout is canonical so I don't commit against a stale/duplicate clone.
2. **Working-dir note.** My harness primary dir is still the standalone `badminton-highlight-indexer`, but I'll operate out of `khelsutra-guru` and `cd` into the right sub-repo per task, branching from `origin/<base>` and staging explicit paths per your concurrency-safety rules.

What would you like to work on?

20. user (2026-07-02T06:11:32.665Z)

Ok so that start here has been cleaned up it was a stale artifact. I started this project from Projects/badminton-highlight-indexer but now I think this setup is better, but maybe we'll iterate on it if needed. So the next time I start a claude code session can I assume the old folder wont be added?

Great! Can you update the memory and any of your bookkeeping to also follow this principle from now on? Or is it that next time again I have to do this loop? :)

21. assistant (2026-07-02T06:11:32.665Z)

Good question ? and the honest answer has one wrinkle worth understanding, because it determines whether the loop actually goes away. Let me check how your memory is wired first.

22. assistant (2026-07-02T06:11:32.665Z)

```
[external_agent_tool_call: Bash]
description: List claude project memory keys
command: ls -d /c/Users/avidu/.claude/projects/*/ 2>&1 | sed 's#./projects/##'
[/external_agent_tool_call]
```

23. assistant (2026-07-02T06:11:32.665Z)

```
[external_agent_tool_result]

[/external_agent_tool_result]
```

24. assistant (2026-07-02T06:11:32.665Z)

That's the key detail. Your auto-memory is **keyed** to the directory you launch `claude` from ? there's a project store for each launch path. All your rich memory (MEMORY.md + ~40 files) lives under the `...Projects-badminton-highlight-indexer` key. There is **no** `...Projects-khelsutra-guru` key yet.

So the precise answer to your question:

- **As a code checkout** ? the old standalone `Projects/badminton-highlight-indexer` is **not** needed anymore (it's redundant with the nested clone here).
- **As your memory anchor / launch dir** ? it currently **is** still needed. If you `cd Projects/khelsutra-guru && claude` next time, no memory loads ? you'd start blank and the loop comes back **worse**.

There are two clean ways to kill the loop. Let me record the principle now (safe either way), then you pick the launch story.

Let me write the memory first:

25. assistant (2026-07-02T06:11:32.665Z)

```
[external_agent_tool_call: Write]
file: C:\Users\avidu\.claude\projects\C--Users-avidu-Projects-badminton-highlight-indexer\memory\working-root-khelsutra-guru.md
[/external_agent_tool_call]
```

26. assistant (2026-07-02T06:11:32.665Z)

```
[external_agent_tool_result]
File created successfully at: C:\Users\avidu\.claude\projects\C--Users-avidu-Projects-badminton-highlight-indexer\memory\working-root-khelsutra-guru.md (file state is current in your context ?
no need to Read it back)
[/external_agent_tool_result]
```

27. assistant (2026-07-02T06:11:32.665Z)

Now the index pointer in MEMORY.md:

28. assistant (2026-07-02T06:11:32.665Z)

```
[external_agent_tool_call: Read]
file: C:\Users\avidu\.claude\projects\C--Users-avidu-Projects-badminton-highlight-indexer\memory\MEMORY.md
[/external_agent_tool_call]
```

29. assistant (2026-07-02T06:11:32.666Z)

```
[external_agent_tool_result]
1      # Memory Index
2
3      ## ? Start here
4      - [? START HERE ? rally finding-B promotion (P2b) + launch signoff](next-session-rally-finding-b-promotion.md) ? **freshest, owner-requested 2026-06-29.** The rally-detection code-review fixes A/B/C are MERGED to `master` (`0c9c693`; **pull first** from `0b4f492`): A unconditional, **B behind `inactivity_temporal_density` (default-OFF = zero-regression no-op)**, the `rally_seg_eval` A/B CLI wired (PRs #394/#395), collector-C warning (sdc#50). ? #393 was CLOSED by a branch-rename, NOT merged ? #394 is the roll-forward ([[lesson-branch-rename-closes-open-pr]]). **? NEXT = P2b: GPU + golden labels + F:\ data are now LIVE ? run the golden A/B at SERVED (`--preset served --vs served --vs-inactivity-temporal-density`), PROMOTE-or-REJECT via `promote_if_served_safe` (no `tol_f1`/dual-set regression), then run the full suite (offline + now-unlocked GPU/golden paths) and produce a GO/NO-GO launch-readiness report for owner signoff** (recommend, don't decide). Runbook = `docs/RALLY_DETECTION_FIXES_PLAN.md` §8 Q2; full detail [[next-session-rally-finding-b-promotion]]. *(Rally-quality track; distinct from packaging/UX/serving.)*
5      - [? START HERE ? multi-shuttle / prominent-court rally detection](next-session-multishuttle-rally.md) ? **icebreaker for the rally-DETECTION design journey (2026-06-19/20).** WASB's detector sees every shuttle; its single-target tracker discards all but one (sometimes the wrong one). Built a multi-track + court-aware selector, **measured vs GOLDEN truth (GX010128): it does NOT beat the single-track baseline as a general producer ? NO PR.** It's a TARGETED lever (separable-adjacent-court + specific-rally recovery), not an F1 win; Gemini-reference oversold it. The 21-25s recovery is real + visually confirmed. **? NEXT = the one experiment that could flip the verdict: a separable-adjacent-court golden clip (`Boxhill_Doubles`, needs owner GPU run) with recall-preserving (court-membership-only) selection.** Full detail [[next-session-multishuttle-rally]] + [[current-state]] top block. *(Design/scratch only; distinct from packaging + UX/serving tracks.)*
6      - [? START HERE ? batteries-included downloadable app](next-session-packaging-app.md) ? **icebreaker + ramp-up for the packaging track.** **? P3 + P2b + P2c ALL DONE 2026-06-22:** P3 GPU validation ($0, L4?22 rallies?73.7MB reel, proof `gs://?/highlights/p3_`); **P2b-install ? engine [#310] MERGED** (`f8b2c3b` ? seeds truly-local + **`motion`** default on first `indexer --app`, gate **08** resolved; `scripts/install.py`/`uninstall.py`); **P2c wizard ? khelsutra [#88] MERGED** (`7ae9cee` ? 3-step `SetupWizard` from `/api/capabilities`, 6 langs); **bundle ? engine [#312] MERGED** (`293e5c0` ? re-bundled `backend/ui/` so **`indexer --app` SERVES the wizard**, live-boot proven). *(The earlier "RECONCILE" note is RESOLVED.)* **? v1 LIGHT is FEATURE-COMPLETE ? only OWNER steps remain: clean-Windows/macOS-box acceptance + ffmpeg-acquisition UX.** North-star (native-WASB-in-default-download + training + annotation) stays future + counsel(03)/owner-GPU-gated. Tracked doc `docs/PACKAGING_PLAN.md` (§7); full detail [[packaging-app-plan]]. *(Distinct from the UX/l10n + serving tracks.)*
7      - [? START HERE ? khelsutra UX/l10n/runnable-tool](next-session-ux-localization.md) ? **refreshed 2026-06-22.** The runnable tool is **BUILT + fully localized (6 langs en/kn/hi/es/da/id)**: in-UI upload (T4) ? process ? pick ? **reel watermarked in the user's language** ? download, + PMF locale analytics. DONE this session: A1/A4/A5/A8/A9, T4, MULTILINGUAL-A, B3(#70), T11(#299), **locale?watermark+analytics (LW1 #304 / LW2 #73 / LW3 #306,
```

verified via real watermark video for all 6 locales)**. **?? 32. assistant (2026-07-02T06:11:32.666Z)

The hook flagged that MEMORY.md is near its read limit ? I'll compact it now (this matters: if it exceeds the limit, memory stops loading). The "? Start here" entries are each a full paragraph duplicating detail that already lives in their linked topic files, so I'll trim each to a one-line hook. Let me read the whole file first.

[external_agent_tool_result]
1 # Memory Index
2
3 ## ? Start here
4 - [Working root = khelsutra-guru (multi-repo)](working-root-khelsutra-guru.md) ? **owner directive 2026-06-29:** work from `Projects\khelsutra-guru` as the multi-repo ROOT (5 git repos: khelsutra.badminton-highlight-indexer.sports-data-collector.rally-annotator.sports-obsreport), switch sub-repo per task. ? auto-memory is keyed to the LAUNCH dir ? all memory lives under the `?badminton-highlight-indexer` key, so keep launching from there (thin memory anchor) UNLESS the memory store is migrated. Stale `start-here-tmp.txt` = dead artifact, ignore.
5 - [? START HERE ? rally finding-B promotion (P2b) + launch signoff](next-session-rally-finding-b-promotion.md) ? **freshest, owner-requested 2026-06-29.** The rally-detection code-review fixes A/B/C are MERGED to `master` (`0c9c693`; **pull first** from `0b4f492`): A unconditional, **B behind `inactivity\_temporal\_density` (default-OFF = zero-regression no-op)**, the `rally\_seg\_eval` A/B CLI wired (PRS #394/#395), collector-C warning (sdc#50). ? #393 was CLOSED by a branch-rename, NOT merged ? #394 is the roll-forward ([[lesson-branch-rename-closes-open-pr]]). **? NEXT = P2b: GPU + golden labels + F:\ data are now LIVE ? run the golden A/B at SERVED (`--preset served --vs served --vs-inactivity-temporal-density`), PROMOTE-or-REJECT via `promote\_if\_served\_safe` (no `tol\_f1`/dual-set regression), then run the full suite (offline + now-unlocked GPU/golden paths) and produce a GO/NO-GO launch-readiness report for owner signoff** (recommend, don't decide). Runbook = `docs/RALLY\_DETECTION\_FIXES\_PLAN.md` §8 Q2; full detail [[next-session-rally-finding-b-promotion]]. *(Rally-quality track; distinct from packaging/UX/serving.)*
6 - [? START HERE ? multi-shuttle / prominent-court rally detection](next-session-multishuttle-rally.md) ? **icebreaker for the rally-DETECTION design journey (2026-06-19/20).** WASB's detector sees every shuttle; its single-target tracker discards all but one (sometimes the wrong one). Built a multi-track + court-aware selector, **measured vs GOLDEN truth

(GX010128): it does NOT beat the single-track baseline as a general producer ? NO PR.** It's a TARGETED lever (separable-adjacent-court + specific-rally recovery), not an F1 win; Gemini-reference oversold it. The 21-25s recovery is real + visually confirmed. **? NEXT = the one experiment that could flip the verdict: a separable-adjacent-court golden clip ('Boxhill_Doubles', needs owner GPU run) with recall-preserving (court-membership-only) selection.** Full detail [[next-session-multishuttle-rally]] + [[current-state]] top block. *(Design/scratch only; distinct from packaging + UX/serving tracks.)*

7 - [? START HERE ? batteries-included downloadable app](next-session-packaging-app.md) ? **icebreaker + ramp-up for the packaging track.** **? P3 + P2b + P2c ALL DONE 2026-06-22:** P3 GPU validation (\$0, L422 rallies?73.7MB reel, proof `gs://?/highlights/p3\_`); **P2b-install ? engine [#310] MERGED** (`f8b2c3b` ? seeds truly-local + **`motion`** default on first `indexer --app`, gate **08** resolved; `scripts/install.py`/`uninstall.py`); **P2c wizard ? khelsutra [#88] MERGED** (`7ae9cee` ? 3-step `SetupWizard` from `/api/capabilities`, 6 langs); **bundle ? engine [#312] MERGED** (`293e5c0` ? re-bundled `backend/ui/` so **`indexer --app` SERVES the wizard**, live-boot proven). *(The earlier "RECONCILE" note is RESOLVED.)* **? v1 LIGHT is FEATURE-COMPLETE ? only OWNER steps remain: clean-Windows/macOS-box acceptance + ffmpeg-acquisition UX.** North-star (native-WASB-in-default-download + training + annotation) stays future + counsel(03)/owner-GPU-gated. Tracked doc `docs/PACKAGING\_PLAN.md` (\$7); full detail [[packaging-app-plan]]. *(Distinct from the UX/l10n + serving tracks.)*

8 - [? START HERE ? khelsutra UX/l10n/runnable-tool](next-session-ux-localization.md) ? **refreshed 2026-06-22.** The runnable tool is **BUILT + fully localized (6 langs en/kn/hi/es/da/id)**: in-UI upload (...
 [/external_agent_tool_result]

35. assistant (2026-07-02T06:11:32.666Z)

The bloat is concentrated in the six "? Start here" paragraphs (lines 4?9) ? each duplicates detail that already lives in its linked topic file. I'll collapse them to one-line hooks (detail stays recoverable via the file link + `[[wikilinks]]`). Everything below line 11 is already ~one line, so I'll leave it.

size: 17062 bytes = 16.7KB  (target <17.1KB / 17510B)
[/external_agent_tool_result]
```

66. assistant (2026-07-02T06:11:32.668Z)

Done. MEMORY.md is now ****16.7KB**** (was 21.8KB), all 40 entries preserved ? I just collapsed the six verbose "? Start here" paragraphs to one-line hooks and tightened the fattest entries.

Detail still lives in the linked topic files.

Now, to answer you directly:

Will the loop come back next session?

****With one caveat handled, no.**** Here's the situation:

- I've recorded the principle in memory ([working-root-khelsutra-guru.md](../.claude/projects/C--Users-avidu-Projects-badminton-highlight-indexer/memory/working-root-khelsutra-guru.md)) + indexed it at the ****top**** of "? Start here", so next session I'll read it and default to operating from `khelsutra-guru` automatically. No re-explaining.

- ****But**** ? your auto-memory is keyed to the directory you launch `claude` from. All your memory lives under the `...badminton-highlight-indexer` key. So whether the principle loads depends on ***where you launch from***:

```
| If you launch `claude` from? | What happens |
|---|---|
| **`Projects\badminton-highlight-indexer`** (as now) | Memory loads ? I read the principle ?
operate from khelsutra-guru. **No loop.** ? |
| **`Projects\khelsutra-guru`** (without migrating) | No memory keyed there ? blank start ?
**loop comes back worse.** ? |
```

So the old folder is dead as a ***code checkout***, but it's currently your ***memory anchor***. Two clean ways forward:

****Option A ? keep launching from `badminton-highlight-indexer`**** (recommended, zero risk). The old folder becomes invisible plumbing ? you never `cd` into it or work there; it just anchors the memory. You start sessions exactly as you do now and I auto-switch to khelsutra-guru.

****Option B ? migrate the memory**** to a `khelsutra-guru` key so you can launch from there and fully drop the old path. I'd copy the whole memory store to the new project key. Slightly more setup, and worktree-keyed sessions + past transcripts stay under the old key, but it lets you truly retire the old folder.

Which do you want? I lean ****A**** ? it gets you the no-loop outcome today with nothing to break. If you'd rather launch from `khelsutra-guru` going forward, I'll do the migration (B) now.

67. user (2026-07-02T06:11:32.668Z)

Option A for sure but the thing is I use UI interface and not CLI mode

68. assistant (2026-07-02T06:11:32.668Z)

Got it ? UI mode changes the ***mechanics*** but not the conclusion. In the UI, the "launch directory" is just ****the folder/project you open****. And here's the reassuring part: ****this session already is the Option A setup.**** You opened `badminton-highlight-indexer` as the project (that's why your memory loaded), and `khelsutra-guru` is attached as an additional folder (that's why I can see all the repos).

Let me check whether that folder attachment is persisted in settings or was added per-session, so I can tell you exactly what to do next time:

69. assistant (2026-07-02T06:11:32.668Z)

```
[external_agent_tool_call: Bash]
description: Check where additional working dirs are configured

  "skipWorkflowUsageWarning": true
[/external_agent_tool_result]
```

73. assistant (2026-07-02T06:11:32.669Z)

That's the missing piece. Your global `additionalDirectories` only persists the **memory dir** ?
`khelsutra-guru` is **not** in there, which means it was attached to **this** session manually (you
added the folder in the UI this time). So next session it wouldn't be auto-attached and you'd
have to re-add it ? a mini version of the loop.

Let me persist it so the multi-repo view is automatic. Reading the full settings first:

82. assistant (2026-07-02T06:11:32.669Z)

Valid JSON, and `khelsutra-guru` is now persisted. Let me record the resolution in the memory file so it's accurate next session:

83. assistant (2026-07-02T06:11:32.669Z)

```
[external_agent_tool_call: Edit]
file: C:\Users\avidu\.claude\projects\C--Users-avidu-Projects-badminton-highlight-
indexer\memory\working-root-khelsutra-guru.md
[/external_agent_tool_call]
```

84. assistant (2026-07-02T06:11:32.669Z)

```
[external_agent_tool_result]
The file C:\Users\avidu\.claude\projects\C--Users-avidu-Projects-badminton-highlight-
indexer\memory\working-root-khelsutra-guru.md has been updated successfully. (file state is
current in your context ? no need to Read it back)
[/external_agent_tool_result]
```

85. assistant (2026-07-02T06:11:32.669Z)

All set. Here's the bottom line for **UI mode**:

What I persisted (so the loop doesn't repeat):

- Added `khelsutra-guru` to `permissions.additionalDirectories` in `~/.claude/settings.json` ? every session now auto-attaches the whole khelsutra-guru tree (all 5 repos). No more manually adding the folder.

- Recorded the principle + this resolution in memory, indexed at the top of "? Start here", so I default to working from khelsutra-guru automatically.

****The one thing you do (and you already do it):****

- When you start a session, ****open `badminton-highlight-indexer` as the project**** ? the same one you opened this time. The app should restore your last project, so it's likely automatic. That keeps your memory loading.

****The one thing to avoid:****

- Don't open `khelsutra-guru` ***itself*** as the UI project. Even though it's our working root, opening it as the project would change the memory key to a blank `...khelsutra-guru` store ? no memory ? loop returns. (If you ever do, I'll notice the blank start and steer you back.)

So the model is: ****project = `badminton-highlight-indexer`**** (invisible memory anchor), ****working root = `khelsutra-guru`**** (auto-attached, where we actually work). Next session, just start as you did today and it all loads ? no re-explaining.

Also tidied up while here: compacted MEMORY.md from 21.8KB ? 16.7KB (it was about to hit the read limit), all entries preserved.

One loose end I'll leave to you: the stale `start-here-tmp.txt` in the khelsutra-guru root ? want me to delete it, or keep it?

86. user (2026-07-02T06:11:32.669Z)

I think I deleted it

87. assistant (2026-07-02T06:11:32.669Z)

```
[external_agent_tool_call: Bash]
description: Check if start-here-tmp.txt still exists
command: f="/c/Users/avidu/Projects/khelsutra-guru/start-here-tmp.txt"; [ -f "$f" ] && echo
"STILL EXISTS: $f" || echo "gone (confirmed deleted)"
[/external_agent_tool_call]
```

88. assistant (2026-07-02T06:11:32.669Z)

```
[external_agent_tool_result]
gone (confirmed deleted)
[/external_agent_tool_result]
```

89. assistant (2026-07-02T06:11:32.670Z)

Confirmed ? it's gone. Nothing left to clean up.

So we're fully set:

- `khelsutra-guru` is our working root, all 5 repos fresh and accessible.
- The setup is persisted (`additionalDirectories`) + recorded in memory, so next UI session just works ? open `badminton-highlight-indexer` as the project, work happens in khelsutra-guru.
- MEMORY.md compacted, stale artifact gone.

What would you like to work on?

90. user (2026-07-02T06:11:32.670Z)

Why not just use khelsutra-guru everywhere and remove Projects/badminton-highlight-indexer as the startup

91. assistant (2026-07-02T06:11:32.670Z)

Good instinct ? and you're right to push on it. The ***only*** reason `badminton-highlight-indexer` is the anchor is that your memory store is keyed to it. There's nothing else tethering you there. If I ****migrate the memory store**** to a `khelsutra-guru` key, then you open `khelsutra-guru` as the project everywhere, memory loads from there, and the awkward "open A but work in B"

split disappears entirely. That's the clean model you want ? it's the Option B I mentioned earlier, and your reasoning for it is sound.

One honest caveat: the desktop app derives the memory key from the opened folder's path (`C:\Users\avidu\Projects\khelsutra-guru` ? `C--Users-avidu-Projects-khelsutra-guru`). I'm confident in that pattern from the existing keys on disk, but I can't *prove* the app auto-loads from the new key until you actually open it. So I'll do this the safe way: **copy** (not move) the memory to the new location now, and leave the old store intact as a fallback. Next session you open `khelsutra-guru`; I confirm memory loaded, then delete the old copy. Zero risk of losing memory.

Let me set it up. First, update the principle note to reflect the new model:

92. assistant (2026-07-02T06:11:32.670Z)

```
[external_agent_tool_call: Edit]
file: C:\Users\avidu\.claude\projects\C--Users-avidu-Projects-badminton-highlight-indexer\memory\working-root-khelsutra-guru.md
[/external_agent_tool_call]
```

93. assistant (2026-07-02T06:11:32.670Z)

```
[external_agent_tool_result]
The file C:\Users\avidu\.claude\projects\C--Users-avidu-Projects-badminton-highlight-indexer\memory\working-root-khelsutra-guru.md has been updated successfully. (file state is current in your context ? no need to Read it back)
[/external_agent_tool_result]
```

94. assistant (2026-07-02T06:11:32.670Z)

```
[external_agent_tool_call: Edit]

[/external_agent_tool_result]
```

96. user (2026-07-02T06:11:32.670Z)

[Request interrupted by user]

97. user (2026-07-02T06:11:32.671Z)

Sorry for the interruption. Keep going and I will try the app restart in sometime

98. assistant (2026-07-02T06:11:32.671Z)

No problem. Continuing the setup ? you can restart whenever. Copying the memory store to the new `khelsutra-guru` key now:

99. assistant (2026-07-02T06:11:32.671Z)

```
[external_agent_tool_call: Bash]
description: Copy memory store to new khelsutra-guru key
command: SRC="/c/Users/avidu/.claude/projects/C--Users-avidu-Projects-badminton-highlight-indexer/memory"
DST="/c/Users/avidu/.claude/projects/C--Users-avidu-Projects-khelsutra-guru/memory"
```

```
mkdir -p "$DST"
cp -r "$SRC/" "$DST/"
echo "=== copied. counts ==="
echo "src files: $(find "$SRC" -type f | wc -l)   dst files: $(find "$DST" -type f | wc -l)"
echo "=== verify MEMORY.md present + sizes match ==="
ls -l "$SRC/MEMORY.md" "$DST/MEMORY.md" | awk '{print $5, $NF}'
[/external_agent_tool_call]
```

100. assistant (2026-07-02T06:11:32.671Z)

```
[external_agent_tool_result]
=== copied. counts ===
src files: 0   dst files: 54
=== verify MEMORY.md present + sizes match ===
17059 /c/Users/avidu/.claude/projects/C--Users-avidu-Projects-badminton-highlight-
indexer/memory/MEMORY.md
17059 /c/Users/avidu/.claude/projects/C--Users-avidu-Projects-khelsutra-guru/memory/MEMORY.md
[/external_agent_tool_result]
```

101. assistant (2026-07-02T06:11:32.671Z)

Copy succeeded ? 54 files, MEMORY.md byte-identical. The `src files: 0` was a fluke in that one `find` (the `ls` right after proves the source files exist). Let me confirm both counts cleanly:

102. assistant (2026-07-02T06:11:32.671Z)

```
[external_agent_tool_call: Bash]
description: Confirm src/dst memory stores are identical
command: SRC="C:/Users/avidu/.claude/projects/C--Users-avidu-Projects-badminton-highlight-
indexer/memory"
DST="C:/Users/avidu/.claude/projects/C--Users-avidu-Projects-khelsutra-guru/memory"
echo "src .md count: $(ls "$SRC"/*.md | wc -l)"
echo "dst .md count: $(ls "$DST"/*.md | wc -l)"
echo "--- diff (should be empty) ---"
diff -rq "$SRC" "$DST" && echo "IDENTICAL"
[/external_agent_tool_call]
```

103. assistant (2026-07-02T06:11:32.671Z)

```
[external_agent_tool_result]
src .md count: 54
dst .md count: 54
--- diff (should be empty) ---
IDENTICAL
[/external_agent_tool_result]
```

104. assistant (2026-07-02T06:11:32.671Z)

Both stores identical (54 files each). Now persist the new memory path in settings so I can write to it once you switch:

105. assistant (2026-07-02T06:11:32.671Z)

```
[external_agent_tool_call: Edit]

d['permissions']['additionalDirectories']]"
[/external_agent_tool_call]
```

110. assistant (2026-07-02T06:11:32.672Z)

```
[external_agent_tool_result]
valid JSON
additionalDirectories:
  c:\Users\avidu\.claude\projects\c--Users-avidu-Projects-badminton-highlight-indexer\memory
  c:\Users\avidu\.claude\projects\c--Users-avidu-Projects-khelsutra-guru\memory
  c:\Users\avidu\Projects\khelsutra-guru
[/external_agent_tool_result]
```

111. assistant (2026-07-02T06:11:32.672Z)

Migration setup complete. Here's the state:

```
**Done now (this session, badminton-anchored):**
- ? Memory store **copied** to the new key ? `...projects\C--Users-avidu-Projects-khelsutra-
guru\memory\` ? 54 files, byte-identical to the original (verified via `diff -rq`). The copy
includes the updated notes reflecting the new model (I edited the source *before* copying).
- ? `settings.json` updated (valid JSON): added the new memory path to `additionalDirectories` +
a matching `Read` permission, so I can write to it once you switch.
- ? Old badminton-keyed store **left fully intact as a fallback** ? nothing deleted.
```

```
**Your one action (whenever you restart):**
- Open **C:\Users\avidu\Projects\khelsutra-guru** as the project, instead of `badminton-
highlight-indexer`.
```

```
**What I'll do next session, once you're in khelsutra-guru:**
```

1. Confirm the memory actually auto-loaded from the new key (I'll see it in my context).
2. If yes ? delete the old badminton-keyed memory store + trim the now-redundant settings entries (the old memory dir + the duplicate khelsutra-guru-root entry, since it'll be the project root). Clean single-folder model achieved.
3. If for some reason it didn't load ? no loss; you reopen `badminton-highlight-indexer` (old store is still there) and we diagnose how the app derives the key.

So: nothing breaks regardless of how the restart goes, and the worst case just reverts to today's working setup. Ping me after you've switched and I'll verify + finish the cleanup.

112. user (2026-07-02T06:11:32.672Z)

Can you also check for a memory file in the b-h-i repo inside khelsutra-guru/ ?

113. assistant (2026-07-02T06:11:32.672Z)

```
[external_agent_tool_call: Bash]
description: Look for memory/CLAUDE files in nested b-h-i repo
command: cd "/c/Users/avidu/Projects/khelsutra-guru/badminton-highlight-indexer"
echo "=== .claude/ ==="; ls -la .claude 2>&1
echo; echo "=== CLAUDE.md / memory-ish at root ==="; ls -la CLAUDE.md MEMORY.md memory 2>&1
echo; echo "=== any memory/CLAUDE files anywhere in repo (excluding .git) ==="; find . -path
.git -prune -o \( -iname "CLAUDE.md" -o -iname "MEMORY.md" -o -name "memory" \) -print 2>&1 |
head -30
[/external_agent_tool_call]
```

114. assistant (2026-07-02T06:11:32.672Z)

115. assistant (2026-07-02T06:11:32.672Z)

Found it. The nested `badminton-highlight-indexer/` repo has a `CLAUDE.md` at its root (5.6KB, modified today) ? that's the repo-level instruction/memory file. No `memory/` dir or `MEMORY.md` inside it (those live only in the `~/ .claude/projects/...` auto-memory store). There's also a `.claude/` folder with `launch.json` + `settings.local.json`. Let me read the CLAUDE.md and check whether settings.local.json points at any memory path:`

116. assistant (2026-07-02T06:11:32.672Z)

```
[external_agent_tool_call: Read]
file: C:\Users\avidu\Projects\khelsutra-guru\badminton-highlight-indexer\CLAUDE.md
[/external_agent_tool_call]
```

117. assistant (2026-07-02T06:11:32.672Z)

```
[external_agent_tool_result]
1      # CLAUDE.md ? project memory / agent handoff
2
3      Local, AI-powered badminton (? racket-sports) highlight indexer + rally detector:
4      FastAPI + SQLite + ffmpeg + GPU CV/AI, with paid Gemini as the cloud AI. Sibling
5      repos: `sports-data-collector`, a VLC-based `rally-annotator`.
6
7      ## Read these first
8      - docs/README.md ? doc index. docs/CODE_MAP.md ? code navigation + data
9      contracts (the cold-start map; read before touching code).
10     - Authoritative owned-model roadmap: docs/OWNED_MODEL_IMPLEMENTATION_PLAN.md (+
the
11     live docs/NEXT_STEPS.md). These SUPERSEDE the 2026-06-07 strategy docs below where
they
12     disagree (licensing, Gemma-4 stance, base model, conversational-QA).
13     - Strategy (post-scaffolding): docs/COMMERCIALIZATION.md,
`docs/PMF_MARKET_RESEARCH.md`,
14     `docs/PLATFORM_ARCHITECTURE.md`, `docs/DEFERRED_HARDENING_PLAN.md`. Also
```

```

`docs/ROADMAP.md`
15      (offline-segmenter narrative) and `docs/BACKLOG.md`.
16      - **Rally-detection quality track (design merged 2026-06-13, owner-gated, implementation
in progress):**
17      `docs/HOW_RALLY_DETECTION_WORKS.md` (2-layer mental model) ?
`docs/MULTI_SIGNAL_FUSION_PLAN.md`
18      (fuse shuttle + person + audio cues; the held-shuttle bug is the already-built
`rally_gate.py`
19      "Gate A" **not wired into production** ? cheapest win) ? `docs/EXPERIMENT_HARNESS.md`
(A/B + shadow
20      eval so cues land flag-gated/default-OFF with zero regression) ?
`docs/ROORA_LABELING_GUIDELINES.md`
21      (v8 vendor labeling spec). **`docs/NEXT_STEPS.md` has the prioritized pick-up for this
track.**
22      - **History:** `docs/archives/` ? ADRs (`decisions/DECISIONS.md`), research, and
23      **`checkpoints/`** (latest: `2026-06-strategy-foundation/`). **Archive policy:** only
move
24      **terminal-state** (DONE/REJECTED) work; live docs stay at `docs/` top level ? and
**before
25      archiving, HONESTLY update the doc first** (verify claims vs code ? flip status + a
completion
26      note ? update inbound refs ? keep the lineage ? then `git mv`), per the checklist +
living
27      lifecycle register in **`docs/DOC_STATUS.md`**.
28
29      ## Current state (June 2026)
30      - **Scaffolding complete** ; strategy foundation + owned-model roadmap merged. **No
31      platform/owned-model implementation has started.** A 2026-06-10 audit-driven hardening
32      sweep landed (licensing gate, detector keying, re-ingest safety, config, eval gate,
API
33      validation, reliability, CI + test coverage) ? see git history.
34      - **Two tracks, both owner-gated:** the **committed next PLATFORM slice = async job
model**
35      (`DEFERRED_HARDENING_PLAN.md` #16, single-tenant); the **owned-model track** starts at
a
36      greenlit Phase-0 milestone (`OWNED_MODEL_IMPLEMENTATION_PLAN.md`). **Do not start
37      implementation without explicit owner approval.**
38
39      ## Architecture in one breath
40      - **Pluggable registries** (ABC + `Registry` singleton): segmenters / providers /
validators
41      / sports / annotations ? see `backend/pipeline/segmenters/base.py`. *Future:*
42      `StorageBackend` + `ComputeBackend` registries (PLATFORM §3).
43      - `video_id` = MD5 of the file ? `backend/utils/hashing.py::compute_video_id` (one
helper).
44      - Typed config = `backend/config/` (Pydantic). DB schema evolves via the `PRAGMA
45      user_version` migration ladder in `backend/infrastructure/database.py`.
46
47      ## Committed guardrails (non-negotiable)
48      - **Paid LLMs (Gemini/OpenAI/Anthropic) = inference / serving / fallback ONLY ? never a
49      training data source** (terms/copyright). Commercial-clean licensing for EVERY
dependency ?
50      code, data, AND weights: **MIT / Apache-2.0 / BSD only** (ratified 2026-06-09, owner-
agreed).
51      - **Owned-model base:** **Qwen3-VL (Apache-2.0)** primary, InternVL3 (MIT) fallback;
**Gemma-4
52      is AMBER / bench-only** (Apache grant likely but Prohibited-Use posture unconfirmed ?
counsel
53      needed; do NOT build on it without sign-off). **Reject Gemma 3** (viral license).
**Exclu...

[/external_agent_tool_call]
```

120. assistant (2026-07-02T06:11:32.672Z)

```
[external_agent_tool_result]
=== settings.local.json: memory/dir refs? ===

=== CLAUDE.md presence across sub-repos ===
no CLAUDE.md : khelsutra
HAS CLAUDE.md: badminton-highlight-indexer (5568 bytes)
no CLAUDE.md : sports-data-collector
no CLAUDE.md : rally-annotator
no CLAUDE.md : sports-obsreport

=== khelsutra-guru ROOT itself ===
no CLAUDE.md at khelsutra-guru root
[/external_agent_tool_result]
```

121. assistant (2026-07-02T06:11:32.672Z)

Here's what's in the nested `badminton-highlight-indexer/`:

```
- **`CLAUDE.md`** at the repo root (5.6KB, modified today) ? titled *"project memory / agent
handoff"*. It's the committed repo-level instruction file: doc index, current-state,
architecture-in-one-breath, and the **non-negotiable guardrails** (paid-LLMs=inference-only,
MIT/Apache/BSD licensing, GCP-only compute, branch/PR conventions).
- **No `memory/` dir and no `MEMORY.md`** inside the repo ? those exist only in the
`~/\.claude/projects/...` auto-memory store (the one we just migrated).
- `\.claude/` has `launch.json` + `settings.local.json` (no memory-path references) + a
`worktrees/` dir.
- Among all 5 sub-repos, **only b-h-i has a `CLAUDE.md`**. khelsutra, sports-data-collector,
rally-annotator, sports-obsreport have none, and **khelsutra-guru's root has none**.

**One implication for the migration you should know:** Claude Code loads `CLAUDE.md` from the
*project root* (+ parents) at startup, and loads a subdirectory's `CLAUDE.md` *lazily* when work
touches files in it. So once you open `khelsutra-guru` as the root, b-h-i's `CLAUDE.md` (with
those guardrails) **won't be in context at session start** ? it'll load the moment I touch any
file under `badminton-highlight-indexer/`.
```

That's mostly fine because:

- Engine work touches those files anyway ? guardrails load right when relevant.
- The cross-cutting ones (GCP-only, paid-LLM-inference-only, licensing) are *also* in your auto-memory (`[[compute-stack-gcp-only]]` etc.), which now loads from the khelsutra-guru key regardless.

If you'd like those guardrails in context from the very start of *every* khelsutra-guru session, I can drop a small `**`CLAUDE.md`` at the khelsutra-guru root\*\* that documents the multi-repo layout and ``@`-imports `badminton-highlight-indexer/CLAUDE.md`` (Claude Code supports ``@path` imports`). Note it'd be an un-versioned local file since khelsutra-guru itself isn't a git repo. Want me to add it, or leave the lazy-load behavior as-is?

122. user (2026-07-02T06:11:32.673Z)

I think the main memory is at Onedrive/Documents/

123. assistant (2026-07-02T06:11:32.673Z)

```
[external_agent_tool_call: Bash]

125. assistant (2026-07-02T06:11:32.673Z)

There's a `**`claude-sync/`**` folder (modified just now, 19:38) and a `**`Claude-Sync-Setup-Guide.md`**`. That looks like the real story ? your memory is likely synced through OneDrive. Let me look:

126. assistant (2026-07-02T06:11:32.673Z)

```
[external_agent_tool_call: Bash]
description: Inspect claude-sync folder structure
command: echo "=== claude-sync/ tree (depth 2) ==="
find "/c/Users/avidu/OneDrive/Documents/claude-sync" -maxdepth 2 2>&1 | head -60
[/external_agent_tool_call]
```

127. assistant (2026-07-02T06:11:32.673Z)

```
[external_agent_tool_result]
=== claude-sync/ tree (depth 2) ===

[/external_agent_tool_result]
```

128. assistant (2026-07-02T06:11:32.673Z)

There it is ? ``claude-sync/memory/`` with per-project folders, including ``badminton-highlight-indexer``. So your memory is synced through OneDrive. This changes the picture ? let me read the setup guide and the sync's CLAUDE.md to understand how it's wired before I say anything more about the migration:

129. assistant (2026-07-02T06:11:32.673Z)

```
[external_agent_tool_call: Read]
file: C:\Users\avidu\OneDrive\Documents\Claude-Sync-Setup-Guide.md
[/external_agent_tool_call]
```

130. assistant (2026-07-02T06:11:32.673Z)

```
[external_agent_tool_result]
1      # Sharing Claude Code memory + global instructions across machines
2
3      **Goal:** make your global instructions (`CLAUDE.md`) and per-project memories
4      follow you between your **desktop** and **laptop**, via OneDrive.
5
6      ## Why this is needed
7
```

```

8 Claude Code stores everything on the local disk under `~/.claude` (i.e.
9 `C:\Users\avidu\.claude\`). Your Anthropic account only handles login/billing ?
10 it does **not** sync these files. So each machine builds its own memory from
11 scratch. The fix: keep one canonical copy in OneDrive and point both machines
12 at it with links.
13
14 ## What syncs (and what must NOT)
15
16 | Synced via OneDrive | Stays per-machine (never sync) |
17 |---|---|
18 | `CLAUDE.md` (your "disciplined states", e.g. the pre-LGTM gate) | `~/.claude.json`
(auth token + MCP config) |
19 | `~/.claude/projects/*/memory/` (memory facts) | `sessions/`, `shell-snapshots/`,
`session-env/`, `ide/`, `backups/` |
20
21 **Sync folder (same logical path on both machines):**
22 `C:\Users\avidu\OneDrive\Documents\claude-sync\`
23 (Both machines have Documents redirected into OneDrive, so this resolves to the
24 same synced folder on each.)
25
26 > The desktop is the **canonical source** ? seed from it first, then link the
27 > laptop. Each link step backs up whatever it replaces as `*.pre-sync.bak`.
28
29 ---
30
31 ## Step 1 ? On the DESKTOP: copy your state into OneDrive
32
33 Plain (non-admin) Windows PowerShell 5:
34
35 ```powershell
36 $claude = Join-Path $env:USERPROFILE '.claude'
37 $sync = Join-Path ([Environment]::GetFolderPath('MyDocuments')) 'claude-sync'
38 New-Item -ItemType Directory -Force (Join-Path $sync 'memory') | Out-Null
39
40 # Global instructions
41 Copy-Item (Join-Path $claude 'CLAUDE.md') (Join-Path $sync 'CLAUDE.md') -Force
42
43 # Every project's memory\ folder, named by project
44 Get-ChildItem (Join-Path $claude 'projects') -Directory | ForEach-Object {
45     $mem = Join-Path $_.FullName 'memory'
46     if (Test-Path $mem) {
47         $name = ($_.Name -split 'Projects-')[1]
48         $dest = Join-Path $sync ('memory\' + $name)
49         New-Item -ItemType Directory -Force $dest | Out-Null
50         Copy-Item (Join-Path $mem '*') $dest -Recurse -Force
51         Write-Host "copied memory: $name"
52     }
53 }
54 Write-Host "Seeded -> $sync"
55 ```
56
57 ## Step 2 ? On the DESKTOP: point it at the synced copies
58
59 **Open PowerShell as Administrator** (so the `CLAUDE.md` symlink succeeds
60 cleanly; junctions don't need admin, but elevating the whole block is simplest):
61
62 ```powershell
63 $claude = Join-Path $env:USERPROFILE '.claude'
64 $sync = Join-Path ([Environment]::GetFolderPath('MyDocuments')) 'claude-sync'
65
66 # CLAUDE.md -> symlink into OneDrive (falls back to an @import stub if not elevated)
67 $src = Join-Path $sync 'CLAUDE.md'
68 $dst = Join-Path $claude 'CLAUDE.md'
69 if (Test-Path $src) {
70     if (Test-Path $dst) { Copy-Item $dst "$dst.pre-sync.bak" -Force; Remove-Item $dst

```

```

-Force }
71     try {
72         New-Item -ItemType SymbolicLink -Path $dst -Target $src -ErrorAction Stop | Out-Null
73         Write-Host "CLAUDE.md -> symlink"
74     } catch {
75         [IO.File]::WriteAllText($dst, "@$src"); Write-Host "CLAUDE.md -> import stub (no
admin)"
76     }
77 } else { Write-Host "No CLAUDE.md in sync folder - run Step 1 first" }
78
79 # memory -> directory junctions (no admin needed)
80 Get-ChildItem (Join-Path $claude 'projects') -Directory | ForEach-Object {
81     $name = ($_.Name -split 'Projects-')[-1]
82     $srcM = Join-Path $sync ('memory\' + $name)
83     $dstM = Join-Path $_.FullName 'memory'
84     if (Test-Path $srcM) {
85         if (Test-Path $dstM) { Copy-Item $dstM "$dstM.pre-sync.bak" -Recurse -Force; Remove-
Item $dstM -Recurse -Force }
86         New-Item -ItemType Junction -Path $dstM -Target $srcM | Out-Null
87         Write-Host "memory -> junction: $name"
88     }
89 }
90 ...
91
92 ## Step 3 ? On the LAPTOP (after OneDrive has synced the folder down)
93
94 Wait until `C:\Users\av...
[/external_agent_tool_result]

```

131. assistant (2026-07-02T06:11:32.673Z)

That's the missing piece ? and an important one. Let me read the sync's own `CLAUDE.md` and verify how the local memory is actually wired (junction vs real folder), because it affects what I did earlier:

132. assistant (2026-07-02T06:11:32.673Z)

```

[external_agent_tool_call: Bash]
description: Check junction status of memory folders
command: echo "=== Is the local badminton memory a JUNCTION to OneDrive? ==="
powershell.exe -NoProfile -Command "Get-Item 'C:\Users\avidu\claude\projects\C--Users-avidu-
Projects-badminton-highlight-indexer\memory' | Select-Object Name, LinkType, Target | Format-
List"
echo "=== And the new khelsutra-guru memory I created earlier? ==="
powershell.exe -NoProfile -Command "Get-Item 'C:\Users\avidu\claude\projects\C--Users-avidu-
Projects-khelsutra-guru\memory' | Select-Object Name, LinkType, Target | Format-List"
[/external_agent_tool_call]

```

133. assistant (2026-07-02T06:11:32.673Z)

```

[external_agent_tool_result]
=== Is the local badminton memory a JUNCTION to OneDrive? ===

```

```

Name      : memory
LinkType  : Junction
Target    : {C:\Users\avidu\OneDrive\Documents\claude-sync\memory\badminton-highlight-indexer}

```

```

=== And the new khelsutra-guru memory I created earlier? ===

```

```

Name      : memory

```

```
LinkType :
Target   : {}
[/external_agent_tool_result]
```

134. assistant (2026-07-02T06:11:32.673Z)

Now I understand the real architecture ? and it means I need to correct something I did.
Confirmed:

- Your ****canonical memory lives in OneDrive****: `OneDrive\Documents\claude-sync\memory\<project>\`, synced across desktop+laptop.
- The local `~/.claude/projects/...badminton-highlight-indexer/memory` is a ****Junction**** ? `claude-sync\memory\badminton-highlight-indexer`. So all my edits this session (the working-root note, MEMORY.md compaction) actually wrote ***through*** the junction into OneDrive. Good ? those are canonical and will sync.
- ****But the khelsutra-guru `memory` folder I created earlier is a plain detached copy (LinkType empty), NOT a junction.**** That's wrong for your model: it wouldn't sync to your laptop and would silently diverge from canonical. I need to fix that.

Let me first confirm my session edits really did land in the OneDrive canonical copy:

135. assistant (2026-07-02T06:11:32.673Z)

```
[external_agent_tool_call: Bash]
description: Verify session edits landed in OneDrive canonical memory
command: CANON="/c/Users/avidu/OneDrive/Documents/claude-sync/memory/badminton-highlight-indexer"
echo "=== canonical OneDrive badminton memory ==="
echo "MEMORY.md size: $(wc -c < "$CANON/MEMORY.md") bytes (expect 17059)"
echo "working-root note present? $([ -f "$CANON/working-root-khelsutra-guru.md" ] && echo YES || echo NO)"
echo "file count: $(ls "$CANON"/*.md | wc -l)"
echo; echo "=== does the synced CLAUDE.md (global) mention the migration / is it the one I should know about? first 6 lines ==="
head -6 "/c/Users/avidu/OneDrive/Documents/claude-sync/CLAUDE.md"
[/external_agent_tool_call]
```

136. assistant (2026-07-02T06:11:32.674Z)

```
[external_agent_tool_result]
=== canonical OneDrive badminton memory ===
MEMORY.md size: 17059 bytes (expect 17059)
working-root note present? YES
file count: 54
```

```
=== does the synced CLAUDE.md (global) mention the migration / is it the one I should know about? first 6 lines ===
```

Global instructions (all projects)

Repo-freshness convention: git pull BEFORE reading

****Always `git pull` a repo before starting to read it**** ? at session start for the primary working directory, and again for any sibling/local repo the moment work touches it.
[/external_agent_tool_result]

137. assistant (2026-07-02T06:11:32.674Z)

Confirmed ? my session edits are safely in the OneDrive canonical copy (MEMORY.md 17059 bytes, working-root note present, all 54 files). Nothing lost.

Now let me fix the migration to be ****sync-correct****. The right structure is: a canonical folder in OneDrive (`claude-sync\memory\khelsutra-guru`) + a local ***junction*** pointing to it ? exactly like badminton. I'll create the OneDrive canonical folder, replace my detached plain copy with a proper junction, leaving the badminton canonical untouched as the fallback:

138. assistant (2026-07-02T06:11:32.674Z)

```
[external_agent_tool_call: Bash]
description: Create OneDrive canonical khelsutra-guru + junction local key to it
command: powershell.exe -NoProfile -Command '
$sync = "C:\Users\avidu\OneDrive\Documents\claude-sync\memory"
$scanonBadminton = Join-Path $sync "badminton-highlight-indexer"
$scanonKhelsutra = Join-Path $sync "khelsutra-guru"
$localKey = "C:\Users\avidu\claude\projects\C--Users-avidu-Projects-khelsutra-guru\memory"
```

1) Create canonical OneDrive khelsutra-guru folder = copy of current badminton cano

```
if (Test-Path $scanonKhelsutra) { Write-Host "canonical khelsutra-guru already exists (skip
copy)" }
else {
    New-Item -ItemType Directory -Force $scanonKhelsutra | Out-Null
    Copy-Item (Join-Path $scanonBadminton "") $scanonKhelsutra -Recurse -Force
    Write-Host "created canonical: $scanonKhelsutra"
}
```

2) Remove my detached plain copy at the local key

```
if (Test-Path $localKey) { Remove-Item $localKey -Recurse -Force; Write-Host "removed detached
plain copy" }
```

3) Recreate it as a JUNCTION -> OneDrive canonical

```
New-Item -ItemType Junction -Path $localKey -Target $scanonKhelsutra | Out-Null
Write-Host "junction created"
```

4) Verify

```
$it = Get-Item $localKey
Write-Host ("LinkType=" + $it.LinkType + " Target=" + ($it.Target -join ","))
Write-Host ("canonical .md count: " + (Get-ChildItem (Join-Path $scanonKhelsutra "*.md")).Count)
'
[/external_agent_tool_call]
```

139. assistant (2026-07-02T06:11:32.674Z)

```
[external_agent_tool_result]
created canonical: C:\Users\avidu\OneDrive\Documents\claude-sync\memory\khelsutra-guru
removed detached plain copy
junction created
LinkType=Junction Target=C:\Users\avidu\OneDrive\Documents\claude-sync\memory\khelsutra-guru
canonical .md count: 54
[/external_agent_tool_result]
```

140. assistant (2026-07-02T06:11:32.674Z)

Now the migration is ****sync-correct****: canonical `claude-sync\memory\khelsutra-guru\` in OneDrive (54 files) + local junction pointing to it, mirroring how badminton is wired. Opening khelsutra-guru on this machine will now load memory from a properly-synced location.

Let me record the OneDrive sync architecture in the memory note (I genuinely didn't know about that layer), then sync it across:

141. assistant (2026-07-02T06:11:32.674Z)

```
[external_agent_tool_call: Edit]
file: C:\Users\avidu\claude\projects\C--Users-avidu-Projects-badminton-highlight-
indexer\memory\working-root-khelsutra-guru.md
[/external_agent_tool_call]
```

142. assistant (2026-07-02T06:11:32.674Z)

```
[external_agent_tool_result]
The file C:\Users\avidu\.claude\projects\C--Users-avidu-Projects-badminton-highlight-indexer\memory\working-root-khelsutra-guru.md has been updated successfully. (file state is current in your context ? no need to Read it back)
[/external_agent_tool_result]
```

143. assistant (2026-07-02T06:11:32.674Z)

Now sync that updated note over to the khelsutra-guru canonical so the two stay aligned (this session writes to the badminton canonical via its junction):

144. assistant (2026-07-02T06:11:32.674Z)

```

Good ? both canonical copies are aligned. Let me give you the corrected picture, since the OneDrive sync layer changes a couple of things.

What I got wrong, and fixed

My earlier "copy the memory to the new key" created a **detached plain folder** ? which would **not** have synced to your laptop and would have silently diverged from canonical. Now corrected: the new key is a proper **junction** ? ``claude-sync\memory\khelsutra-guru`` in OneDrive, exactly mirroring how badminton is wired. Your session edits are confirmed safe in the canonical OneDrive copy.

Current state (all reversible)

Item	State
Canonical <code>`claude-sync\memory\badminton-highlight-indexer`</code>	intact (fallback), has all session edits
Canonical <code>`claude-sync\memory\khelsutra-guru`</code>	created (copy), 54 files, aligned
Local <code>`?khelsutra-guru/memory`</code>	junction ? points to the OneDrive canonical
<code>`settings.json`</code>	(additionalDirectories + Read perm) ? updated for the new path
Memory note + MEMORY.md	? updated, document the sync architecture

Two things still pending

1. Your laptop (only matters if you use it). After OneDrive syncs the new ``khelsutra-guru`` folder down, open khelsutra-guru once there, then re-run the **Step 2 link block** from your ``Claude-Sync-Setup-Guide.md`` ? it junctions the laptop's new key to the synced folder. Without that, the laptop wouldn't link the new project.

2. De-duplication (after you verify). There are now **two** canonical folders (badminton + khelsutra-guru), which goes against your "one canonical copy" principle. I left it that way

deliberately so nothing's destroyed before you confirm. ****Once you've restarted and confirmed khelsutra-guru loads memory****, I'll either retire the badminton canonical, or ? cleaner ? switch to a ****rename**** so there's a single canonical folder with both keys junctioned to it (no duplication, no divergence). I lean toward the rename; I'll do it on your go-ahead after verification.

****Your restart step is unchanged:**** open `C:\Users\avidu\Projects\khelsutra-guru` as the project. Ping me once you have, and I'll verify the load and finish the de-dup.

147. user (2026-07-02T06:11:32.675Z)

how do I open claude UI tool in that folder ?

148. assistant (2026-07-02T06:11:32.675Z)

In the Claude Code desktop app, you don't "cd" ? you start a session ****scoped to a folder**** by picking that folder. The usual flow:

1. ****New session / new chat**** (the `+` or "New" button, usually top-left or in the sidebar).
2. When it asks for the ****working folder / project directory****, browse to `C:\Users\avidu\Projects\khelsutra-guru` and select it.
3. That folder is now the session's root ? and because we set up the junction, your memory will load from the `khelsutra-guru` key.

If it shows a ****recent folders**** list, `khelsutra-guru` may not be there yet (you've been opening `badminton-highlight-indexer`), so use "Browse"/"Open folder" to pick it the first time; afterward it'll be in the recents.

I don't want to guess the exact button labels for your app version, though. Two options:

- ****Tell me what you see**** (e.g. the buttons on your start screen) and I'll point at the exact one, or
- ****Let me take a screenshot**** of your Claude window and I'll show you precisely where to click. That needs your approval for screen access ? say the word and I'll request it.

Which do you prefer?
