? START HERE ? Golden Regression Fixtures (optional next items)

****You are here:**** the track is ****implementation-COMPLETE**** (8 PRs: `#186 #189 #191 #192 #193 #194 #314 #317`). A clean clone runs rally-seg regression ? synthetic ****+ 6 de-attributed real fixtures `fx\_r01?r06`**** ? with no video/GPU/DB, cross-OS enforced, leak-guarded, audited. Tracker `M1·M2·M3·MX·P1·P2·DOC·P0·P3` = all ?.

****Ramp-up kit (read in order):**** `docs/GOLDEN\_REGRESSION\_FIXTURES.md` (\$7 tracker = source of truth) ? `backend/eval/golden\_fixtures.py` + `golden\_real\_fixtures.py` ? `tests/test\_golden\_fixtures.py` + `test\_golden\_real\_fixtures.py` ? `eval\_baselines/fixtures/` ? `ci.yml` (`golden-crossos` + `leak-scan` jobs) ? `tools/leak\_scan.py`.

Next steps ? prioritized (all optional, none blocking)

1. ****M4 ? quality-floor gate**** *(recommended first; now meaningful on real data).* Assert per-fixture + mean ****F1 ? a committed floor**** in `eval\_baselines/regression\_baseline.json` (reserved-but-absent path). ***First move:*** the F1 is already frozen in each `fx\_\*/expected.json` `score` ? seed the per-slug floor from it (the real fixtures sit at ****0.0?0.59****, so floor = `current ? tolerance`, not a global bar). ****Gotchas:**** include a ****windowing fingerprint**** in the floor record (or a SERVED retune silently passes), keep it ****CONTROL-only**** (learned/numpy-BLAS = non-deterministic across CPUs), add it to the `golden-crossos` matrix.
2. ****Deferred video-name rename**** *(do before any open-sourcing).* Rename the functional names (`eval\_baselines/\*.json` keys, `rally\_seg\_eval.MULTICOURT\_CLIPS`, quality logs) ? opaque ids. ***Why it's hard:*** the keys feed `training/gen0/harness.py`'s LOVO floor, matched to the ****gitignored `output/human\_lovo\_manifest.json` + data files**** ? rename them together or you break the floor; also collides with the hot quality track. ***First move:*** put the names in a gitignored `.leakscan\_private`, run `python -m tools.leak\_scan --names .leakscan\_private` to enumerate every occurrence, then plan the coordinated rename.
3. ****01 protobuf / 02 Tier-1 key-gated**** ? only if their specific need (byte-stable snapshots / person-stream sharing) arises.

Locked decisions ? don't relitigate

Option **** (a) **** = commit the de-attributed ****per-frame**** `trajectory.csv` (non-attributability rests on the source staying unpublished). ****CONTROL-only**** cross-machine gate. ****Pinned**** windowing 3-tuple per fixture (never the named `SERVED`). ****Parse-compare****, never byte. P0 = safe-scope only.

Facts to carry

- ****Golden data:**** `?\Annotation Setup\Collect\{Trajectories,Golden Labelled}\` + repo `output\\*.rallies.csv` (manifest = 15 videos); F:\ has source videos.
- ****Off-git `fx\_` map**** (keep in `.leakscan\_private`): r01=mahadevpura_single, r02=kushagra, r03=mahadevpura_1, r04=largetest_doubles, r05=GX010128, r06=Boxhill_Doubles.

- ****Shared checkout:**** branch from `origin/master` in an isolated worktree; the `gh` "master used by worktree" merge error is benign. Repo is on the ****`khelsutra`**** org (CI bills there).

2. assistant (2026-07-02T06:11:32.926Z)

I don't see a specific request yet ? but you're on `fix/worker-train-dated-label-join` with uncommitted changes in `backend/worker/\_\_main\_\_.py` and `tests/test\_worker.py`, plus untracked `artifacts/` and `docs/KHELSUTRA\_PRODUCT\_OVERVIEW.md`. Let me orient on the in-flight work so I can pick up usefully.

=== BRANCH/HEAD ===

fix/worker-train-dated-label-join

d301a7f fix(nightly): GCP-L4-validated fixes ? gs:// fetch dst, WASB env, weights path, pure-engine (#318)

fa2342c feat(nightly): E2E engine reel-count regression on a GCP GPU VM (emailed) + cost (#315)

7a40434 feat(eval): golden fixtures P3 ? 6 curated, trimmed, de-attributed REAL Tier-0 fixtures + --max-frames trim (#317)

5c2eec8 chore(security): P0 (safe scope) ? scrub personal paths from code + add leak-scan CI guard (#314)

689c738 docs(pkg): mark P2c ? + the loop closed ? v1 LIGHT is feature-complete (#313)

[/external_agent_tool_result]

7. assistant (2026-07-02T06:11:32.926Z)

The in-flight work is clean and self-contained: a fix in

[`backend/worker/\_\_main\_\_.py`](backend/worker/__main__.py) adding a `\_label\_clip\_name()` helper that strips the ISO-date prefix from canonical label filenames so `train --trajectory-source detector` can join dated labels (`labels/2026-06-22\_GX020094.rallies.csv`) to bare videos (`videos/GX020094.mp4`) ? with a parametrized unit test and a full regression test. The branch has ****no commits yet**** (working-tree only). Let me check the two untracked items to see if they belong with this change.

KhelSutra ? Product Overview & Early-User Guide

What it does today, how to get the best out of it, and where it's going.
For field associates and for invited alpha / beta academies, coaches, and players.

In one line

****KhelSutra turns ordinary badminton video into useful pieces ? automatically.**** Put a phone or GoPro on a tripod behind the court, record a session, and KhelSutra automatically finds the rallies, stitches a ****highlight reel****, and gives you a ****simple summary**** (how many rallies, how much real play time). No special hardware, no editing, no manual scrubbing.

The problem we're solving

Academies and serious players already record a lot of video ? and then almost never watch it. Hours of footage pile up on phones and memory cards because cutting it into useful clips by hand is tedious and nobody has the time. The good rallies, the moments worth reviewing, stay buried.

Most academy halls also run ****several courts at once****, so a single recording is a busy, noisy scene that ordinary video tools choke on. ****Pulling the real rallies out of busy, multi-court footage is the hard problem KhelSutra is built to crack**** ? it already works very well on clean, single-court recordings, and the multi-court case is exactly what we're sharpening now.

Who it's for

```
...
203 docs/KHELSUTRA_PRODUCT_OVERVIEW.md
[/external_agent_tool_result]
```

10. assistant (2026-07-02T06:11:32.926Z)

`artifacts/` is gitignored scratch (not part of any commit).
`docs/KHELSUTRA\_PRODUCT\_OVERVIEW.md` is a separate untracked 203-line product doc ? unrelated to this branch.

So the actual in-flight change is exactly the worker date-prefix-strip fix + its tests. No user task is pending, so rather than guess, let me verify the fix is sound and green (non-destructive), then I'll lay out the options. Running the worker tests, lint, and type-check now:

11. assistant (2026-07-02T06:11:32.926Z)

```
[external_agent_tool_call: Bash]
description: Run worker test module

```

15. assistant (2026-07-02T06:11:32.927Z)

Tests pass (26), ruff clean, mypy clean. Let me confirm the fix's logic against the surrounding code ? specifically that `video\_by\_stem` is keyed by bare stems so the date-stripped name actually joins.

```

18. assistant (2026-07-02T06:11:32.927Z)

Logic confirmed: `video\_by\_stem` is keyed by the bare stem (`os.path.splitext(vname)[0]` ? `GX020094`), and the label name is now date-stripped to match ? so the join works. The fix is minimal, correct, and the changed files are green. Let me run the full offline suite to confirm nothing else regressed, since this fix is otherwise commit-ready.

Full suite: **1426 passed, 1 failed in ~100s.** The single failure is in

```
[`tests/test_served_gate_a_regression.py`](tests/test_served_gate_a_regression.py) ? an over-segmentation **snapshot** assertion (`mean_seg_off` expected `1.16 ±0.10`, observed `1.36`). That test exercises the rally-gate path and never touches `backend/worker`, so it can't be caused by this fix. Let me confirm it's pre-existing by stashing my two changes and re-running just that test.

27. assistant (2026-07-02T06:11:32.927Z)

The working tree changed underneath me ? a concurrent session committed the worker fix and the branch now tracks `origin/fix/worker-train-dated-label-join` (it tracked `origin/master` minutes ago). This is the shared-checkout / concurrent-session case my instructions warn about. Let me see exactly what landed.

28. assistant (2026-07-02T06:11:32.927Z)

No work was lost ? that exact verified change is now committed as `a2c8be0` (the sole commit over `master`) and pushed to `origin/fix/worker-train-dated-label-join`. Let me quickly check whether the failing gate-A test is local-data-gated (so I know whether it's a CI-affecting break or just local-corpus drift).

```
[external_agent_tool_result]
1      """SERVED Gate-A regression litmus ? the *production* FusionSegmenter path on real
footage.
2
```

```

3      The flagged gap (#146): the served default flip (`default_segmenter=fusion_hybrid` +
4      ``min_crossings=2``) is **mock-tested only** on real video (`test_fusion_hybrid.py`
drives a
5      MagicMock runner). The offline ablation litmus
6      (`test_ablation.test_litmus_reproduces_gate_a`)
7      validates the Gate-A *signal* ? but on the **permissive proposal windowing**
8      (`distill_local.PROPOSAL`), NOT the production operating point. This module closes the
gap: it
9      runs the real ``FusionSegmenter`` decision seams (`enrich_candidate_stats` net-
crossings +
10     ``select_for_handoff`` Gate A) over windows from the **production**
11     ``trajectory_to_action_windows`` config, on the cached golden WASB trajectories, and
asserts
12     the served path's measured behaviour.
13     GPU-free / Gemini-free (person cue OFF) ? it stops at the AI-handoff boundary. Skips
cleanly in
14     CI where the golden trajectories are absent; runs on the owner box where they are
present, over
15     **whatever golden clips are currently on disk** (`golden_specs` requires >= 6).
16     CORPUS NOTE ? re-grounded 2026-06-18 (the golden set is mutable and grows over time).
The
17     original 6 *single-court* golden clips this litmus was first calibrated on (2026-06-14)
have been
18     retired from the box ? their labels are gone ? so the present golden set is the 9
**multicourt**
19     clips now in `output/` (mahadevpura_1/2, GX0101xx, GX0x0094, Badminton_BXH_2,
Boxhill_Doubles).
20     On that corpus the served path is **recall-starved**: WASB tracks a single shuttle while
several
21     courts rally at once, so ``trajectory_to_action_windows`` emits FEWER windows than there
are
22     rallies (served over-seg ratio < 1, i.e. under-segmentation). Because Gate A only ever
DROPS
23     windows, on this under-segmented corpus it is mildly **F1-negative** (mean served ?F1 ?
-0.034),
24     not the ~neutral -0.008 the original 6 showed. Under the permissive PROPOSAL windowing
the same
25     gate is ~F1-neutral (?F1 ? -0.001) while still cutting over-segmentation (1.16?0.64).
26     The canonical **+0.074 / 6-of-6 / p=0.031** Gate-A win was a property of the
*original-6* corpus
27     and is NOT reproduced here (those clips are no longer on the box); it is preserved in
the archive
28     (`docs/archives/quality-iterations/2026-06-first-ab-experiment/`). These tests now pin
the
29     **present-corpus** behaviour so a future windowing/corpus change that silently shifts it
trips the
30     litmus. The pinned magnitudes are a date-stamped snapshot of the present golden set and
will need
31     re-measurement as the corpus grows.
32     """
33     from __future__ import annotations

[/external_agent_tool_result]

```

33. assistant (2026-07-02T06:11:32.928Z)

Now I have the full picture. Here's where things stand.

Status

****1. The in-flight worker fix is committed, pushed, and verified green.****

While I was verifying, a concurrent session committed it (shared checkout ? exactly the case the branching-safety convention warns about). Nothing was lost: the commit `a2c8be0 fix(worker): strip ISO-date prefix when joining labels to videos in train` is the ****sole commit over `master`****, pushed to `origin/fix/worker-train-dated-label-join`, and contains exactly the change I verified:

- ? `tests/test\_worker.py` ? 26 passed (incl. the new `\_label\_clip\_name` param test + the dated-label?bare-video join regression)
- ? `ruff check` clean, `mypy` clean on `backend/worker/\_\_main\_\_.py`
- ? Logic confirmed: `video\_by\_stem` is keyed by bare stem (`splitext(name)[0]`), and the date-stripped label name now joins correctly.

****2. One full-suite failure ? unrelated to this fix, and local-only (not a CI break).****

[`test\_served\_gate\_a\_regression.py`](tests/test_served_gate_a_regression.py) trips on an over-seg ****snapshot**** assertion: `mean\_seg\_off` expected `1.16 ±0.10`, observed `1.36`. I confirmed it:

- reproduces on the ****clean tree**** (stashing the worker change makes no difference ? it never touches `backend/worker`), and
- the test itself documents that its pinned magnitudes are ****a date-stamped snapshot of the present golden set [that] will need re-measurement as the corpus grows**** and ****skips cleanly in CI**** (no `cv2` / no `output/human\_lovo\_manifest.json`).

Your local golden corpus has grown since the 2026-06-18 snapshot (the 6 new `fx\_r0X` real fixtures via #317, etc.), so the litmus is firing exactly as designed ? local-corpus drift, not a regression. The other ****1426 tests pass****.

****3. The two untracked items are unrelated:**** `artifacts/` is gitignored scratch;
`docs/KHELSUTRA\_PRODUCT\_OVERVIEW.md` is a standalone 203-line product doc, not part of this branch.

What I'd suggest next

You didn't leave a specific task, so I held at verification rather than guess. The natural forks:

- ****Open the PR**** for `a2c8be0` ? it's verified-green and self-contained (I'll do this only on your go-ahead, per the one-PR-per-item / "don't open a PR unless asked" convention).
- ****Re-ground the gate-A snapshot**** ? re-measure on the current local golden corpus and update the pinned `1.16 ? ~1.36` (this is an owner-gated quality/corpus call, and per the Launch-Report convention a default/quality-snapshot flip should be recorded honestly ? I shouldn't silently

edit a measured-regression test).

- **Something else entirely** (e.g. the golden-fixtures M4 quality-floor next item, or the product doc).

Which direction do you want?

34. user (2026-07-02T06:11:32.928Z)

please merge the green PRs are ensuring impvred test coverage and green CI
please complete 1. and 2. and mark 3 as a backlog and can fix the docs and archive any if they are completed merging all the green PRs with improved test coverage numebrs

35. assistant (2026-07-02T06:11:32.928Z)

Understood. Let me consolidate your asks into a concrete plan:

1. **Merge the green PRs** (with improved coverage + green CI) ? including opening/merging the verified worker fix (``a2c8be0``).
2. **Re-ground the failing gate-A snapshot** so it's green again.
3. **Backlog the "item 3" optional work** (golden-fixtures M4 etc.).
4. **Fix docs + archive any that describe completed work** per the archive policy.

First I need to survey the real state across both repos before mutating anything. Let me fetch fresh and enumerate open PRs, CI status, the full gate-A test, and the doc/backlog registers.

36. assistant (2026-07-02T06:11:32.928Z)

```

The previous `cd` to khelsutra persisted into this call's working directory, so `gh` queried the wrong repo. Let me cd back to the engine repo and re-query.

46. assistant (2026-07-02T06:11:32.928Z)

CI status is clear:

- **#319** (worker fix): **all 10 checks pass, CLEAN** ? ready.
- **#316** (docs(data) GCS map + migration): **all pass, CLEAN** ? green.
- **#320** (nightly scheduler feat): **UNSTABLE** ? "Full test suite (offline, mocked)" is still **pending**; everything else passes.

Before merging anything I need to (a) check file overlap so an earlier merge doesn't break a later PR, (b) confirm each actually adds/maintains test coverage, and (c) confirm none touch product/strategy/licensing. Let me pull file lists + the diffs I haven't seen.

47. assistant (2026-07-02T06:11:32.928Z)

```
[external_agent_tool_call: Bash]
description: List changed files per PR to check overlap and test coverage
command: cd /c/Users/avidu/Projects/badminton-highlight-indexer
for pr in 319 320 316; do echo "=== PR #$pr files ==="; gh pr view $pr --json files --template
'{{range .files}}{{.path}} (+{{.additions}}-{{.deletions}}){"\n"}}{{end}}'; done
[/external_agent_tool_call]
```

48. assistant (2026-07-02T06:11:32.928Z)

```
[external_agent_tool_result]
=== PR #319 files ===
backend/worker/__main__.py (+26/-2)
tests/test_worker.py (+60/-0)
=== PR #320 files ===

[/external_agent_tool_result]
```

49. assistant (2026-07-02T06:11:32.928Z)

No file overlap between the three PRs ? they're independent, so merge order won't create conflicts. Coverage-wise: **#319** adds +60 lines of tests (coverage up); **#320** is shell-only (deploy/gcp scripts, no Python) and **#316** is docs-only ? both coverage-neutral, neither regresses.

One logical dependency I noticed: **#319**'s code comments cite `docs/DATA_IN_GCS.md §7.1` / `§7b`` ? sections that **#316** creates. Let me confirm that file doesn't yet exist on master (? merge **#316** first), quick-review the two diffs I haven't seen, and read the full gate-A test to prep the re-grounding.

+# Data in GCS ? the corpus source-of-truth map
+
+***Status:** LIVE / in-progress (migration not complete). **Owner-gated** decisions in §7.
+***Last inventoried:** 2026-06-22 against `gs://khelsutra-rally-corpus`.
+***Goal (owner, 2026-06-22):** run **all** training + inference from the cloud with **all data in GCS**,
+so the local Windows box (and the intermittently-mounted external drive) is **no longer a blocker**.
+
+> **? Other sessions: this is where the data lives.** Pull from `gs://khelsutra-rally-corpus`, not
+from anyone's `C:` / `F:` / Google Drive. If something you need isn't in the bucket yet, it's in the
+gap table (§5) ? flag it / migrate it, don't hard-code a local path.
+
+This doc is the **data map**. The *machine* runbooks are
+[`SETUP_NEW_MACHINE.md`](SETUP_NEW_MACHINE.md)
+
+(spin up a box) and [`deploy/gcp/README.md`](../deploy/gcp/README.md) (provision GPU + train/infer).
+
+The cloud engine itself was built by the (archived) DECOUPLED_COMPUTE project
+(`docs/archives/past_projects/DECOUPLED_COMPUTE/`); this doc does **not** redesign it ? it records
+where the bytes are* and *what's still missing*.
+
+---
+
+## 1. The bucket
+
+| | |
+|---|---|
+| Bucket | **`gs://khelsutra-rally-corpus`** (single corpus bucket) |
+| Project | `gen-lang-client-0306026826` (billing *Khelsutra Billing*) |
+| Region | `asia-south1` (Mumbai), UBLA, co-located with the GPU VMs |
+| Auth | SA `rally-worker@gen-lang-client-0306026826.iam.gserviceaccount.com`
+(`roles/storage.objectAdmin`); key at `~/gcp/rally-worker-sa.json` (local only, **never committed**). Interactive: `gcloud auth login`. |
+| Size today | ~2.06 GB (mostly past dry-run reels/outputs ? **not** the full corpus) |
```

```

+
+The engine is backend-agnostic by URI (`backend/storage/ref.py`): `gcs://` (or `gs://`),
+`s3://`, `gdrive://`, or a bare local path. Pick the backend with config + creds, no code
+change**.
+
+---
+
+### 2. Canonical layout (the target contract)
+
+The cloud worker's input/output contract (`backend/worker/__main__.py`; lineage:
+`DECOUPLED_COMPUTE/04`):
+
+| Prefix | Holds | Who reads/writes it |
+|---|---|---|
+| `videos/` | source videos / proxies (`<clip>.mp4`) | input to `worker infer` & `worker
+train` |
+| `labels/` | golden rally labels (`<clip>.rallies.csv`) | input ground truth to `worker
+train` + all eval |
+| `trajectories/` | cached WASB trajectory CSVs | ? eval/litmus input (GPU-free), consumed
+via `manifests/golden.json`. NOT read by `worker train` (it synths or re-extracts) |
+| `weights/<version>/` | trained Gen-0 bundles (`weights.json` + a run `manifest.json`) |
+output of `worker train` |
+| `models/` | upstream pretrained weights (`wasb_badminton_best.pth.tar`) | staged to a local
+path* (`$WASB_WEIGHTS` / `~/models/?`) for the detector ? not read from `gs://` in place |
+| `outputs/<video_id>/` | per-video inference outputs (intervals, etc.) | output of `worker
+infer` |
+| `highlights/`, `promo/` | rendered reels + promo artifacts | output / demo |
+
+> Note on the manifest. `worker train` does not read a pre-staged corpus
+`manifest.json` ? it
+> builds one on-box at train time from `labels/` (+`videos/`), extracting trajectories
+synthetically
+> by default* (`--trajectory-source synth`, CPU-mock) or for real via opt-in `--trajectory-
+source
+> detector` (needs `videos/`). A `manifest.json` only appears as an output inside each
+> `weights/<version>/` bundle. The eval/litmus path is what wants a stable, path-resolvable
+manifest
+> ($7.3) ? ...
+[/external_agent_tool_result]

```

[/external_agent_tool_result]
```

#### 54. assistant (2026-07-02T06:11:32.929Z)

Both diffs are clean and safe to merge:

```
- **#316** ? pure docs: new `docs/DATA_IN_GCS.md` (the GCS corpus map, marked LIVE/in-progress, owner-gated $7) + 1 line in `docs/README.md`. No code, no leaks (leak-scan green). Confirmed `DATA_IN_GCS.md` is **not** in HEAD ? must merge before #319 so the worker fix's `$7.1`/$7b` comment references resolve.
```

```
- **#320** ? pure deploy shell scripts (`deploy/gcp/nightly_regression/`): `--run-now`, dry-run mode, SA IAM auto-grant, `setup_email.sh` (reads the app password from STDIN, not argv ? good hygiene). Infra plumbing for the nightly track, no product/strategy/licensing surface. Only blocker: full suite still pending (can't fail ? zero Python changed).
```

No file overlap among the three ? safe to merge independently. \*\*Merge order: #316 ? #319 ? #320 (when green).\*\* Coverage: #319 adds tests (?), #316/#320 add zero Python (neutral); all pass CI's coverage-gated suite.

Let me re-verify HEAD is clean/mine, move to master, and merge the two green PRs (#316 then #319).

#### 55. assistant (2026-07-02T06:11:32.929Z)

a2c8be0 fix(worker): strip ISO-date prefix when joining labels to videos in train
 M tests/test_worker.py
=== checkout master + ff pull ===
fatal: 'master' is already used by worktree at 'C:/Users/avidu/Projects/badminton-highlight-
indexer/.claude/worktrees/tier1-windowing'
Already up to date.
[/external_agent_tool_result]
```

#### 57. assistant (2026-07-02T06:11:32.929Z)

Two concurrency signals I must handle before mutating anything:

1. `git status` now shows `M tests/test\_worker.py` ? an \*\*uncommitted change that isn't mine\*\* (the worker change was already committed as `a2c8be0`). A sibling session is likely editing it live.
2. `git checkout master` failed ? \*\*master is checked out in another worktree\*\*  
`.claude/worktrees/tier1-windowing` (a concurrent session, and its name suggests it's working the \*windowing/gate-A\* area I was about to touch).

I must not clobber sibling WIP, and I should not duplicate gate-A work if it's already in progress. Let me investigate before doing anything.

## 60. assistant (2026-07-02T06:11:32.929Z)

Now I see the real picture: this checkout is **\*\*shared by ~12 concurrent sessions\*\*** (worktrees + the main checkout). Critically:

- The `M tests/test\_worker.py` is a **\*\*sibling actively adding more worker tests\*\*** to the #319 branch *\*right now\** (two new skip-branch coverage tests, uncommitted). Merging #319 at `a2c8be0` would strand that in-flight work.
- **\*\*Task 2 is already in progress on a sibling branch\*\*** `fix/served-gate-a-corpus-regrounding` (and the `tier1-windowing` worktree holds `master`) ? I should not duplicate it.
- `master` is checked out in another worktree, so I can't switch to it here (I'll merge server-side via `gh` instead).

Let me get the fresh PR list and the state of the gate-A re-grounding branch before deciding what's genuinely safe to merge.

## 61. assistant (2026-07-02T06:11:32.929Z)

### 63. assistant (2026-07-02T06:11:32.929Z)

The picture is shifting live (siblings are committing as I work):

- **#320** is now **CLEAN** (full suite finished green).
- **#319** flipped to **UNSTABLE** ? the sibling likely just pushed those new worker tests, re-triggering CI.
- **#316** stays **CLEAN**.
- The **gate-A** re-grounding (task 2) already exists as 2 commits on `fix/served-gate-a-corpus-regrounding` (`e59b2fd test(eval): re-ground served Gate-A litmus?` + `de4240f docs(eval): re-ground the +0.074 standing-guard claims`), but its upstream shows `[gone]`.`

I need three more facts before merging: whether **#320**'s worktree has uncommitted WIP (stranding risk), whether the **gate-A** branch is pushed/has a PR, and whether **gate-A**'s fix is already on master.

### 64. assistant (2026-07-02T06:11:32.929Z)

```

[external_agent_tool_call: Bash]
description: Check sched-fix WIP, gate-A PR state, and whether gate-A fix is on master
command: cd /c/Users/avidu/Projects/badminton-highlight-indexer
echo "=== #320 worktree (sched-fix) uncommitted? ==="; git -C .claude/worktrees/sched-fix status --porcelain 2>&1 | grep -vE '^?\?' || echo "(clean ? no tracked WIP)"
echo; echo "=== gate-A: any PR (any state)? ==="; gh pr list --state all --head fix/served-gate-a-corpus-regrounding --json number,state,title,mergeStateStatus 2>&1

local a2c8be0; sibling WIP uncommitted in main tree
[/external_agent_tool_result]
```

#### 66. assistant (2026-07-02T06:11:32.929Z)

Now everything is clear:

- **\*\*#320's worktree is clean\*\*** (no stranding risk) ? safe to merge.
- **\*\*Gate-A: PR #236 already merged\*\*** that re-grounding ? but it pinned `1.16`, and `origin/master` still has `1.16` while the **\*\*local corpus has since drifted to `1.36`\*\***. So task 2 is genuinely stale **\*again\*** (corpus grew) and needs re-grounding for the current corpus. The local `fix/served-gate-a-corpus-regrounding` branch is just the dead remnant of merged #236 (squash artifact), not new work.
- **\*\*#319's remote advanced to `b3b4952`\*\*** ? the sibling pushed the two new coverage tests; that's why it's UNSTABLE (CI re-running). Better coverage incoming ? I'll merge it once green.

**\*\*Phase 1 ? merge the two ready green PRs.\*\*** Merging #316 first (so #319's `DATA\_IN\_GCS` §7` comment refs resolve), then #320 (no `--delete-branch` since its branch is live in a worktree).

#### 67. assistant (2026-07-02T06:11:32.929Z)

```
[external_agent_tool_call: Bash]
description: Squash-merge PR #316 and confirm master advanced
command: cd /c/Users/avidu/Projects/badminton-highlight-indexer

## 72. assistant (2026-07-02T06:11:32.930Z)

#320 merged ? `origin/master` at `48f9d20`.

\*\*\*#319 is red on Ruff lint\*\* (full suite passes ? the sibling's two new tests are functionally correct but have a lint violation). The working tree holds exactly that pushed version, so I can reproduce locally. Let me see the violation.

## 73. assistant (2026-07-02T06:11:32.930Z)

```
[external_agent_tool_call: Bash]
description: Reproduce #319 ruff failure locally and confirm working tree matches remote

[/external_agent_tool_result]
```

## 75. assistant (2026-07-02T06:11:32.930Z)

Ruff passes on my working tree but it **\*\*differs from `b3b4952` by one deleted line\*\*** ? the sibling is **\*actively fixing the exact ruff error right now\*** (deleted the offending line, not yet committed). So #319 is mid-repair by its owner. I'll let them finish and poll it.

Before I touch task 2 (gate-A), I need to check the `tier1-windowing` sibling ? its name suggests it works the same windowing/gate area, and re-grounding the snapshot could collide with or be invalidated by their work.

#### 76. assistant (2026-07-02T06:11:32.930Z)

```
[external_agent_tool_call: Bash]
description: Inspect tier1-windowing worktree for collision with gate-A task
command: cd /c/Users/avidu/Projects/badminton-highlight-indexer

[/external_agent_tool_call]
```

#### 77. assistant (2026-07-02T06:11:32.930Z)

```
[external_agent_tool_result]
=== tier1-windowing worktree: branch + commits ahead of origin/master ===
a3b209a feat(windowing): Tier 1 (W1) ? bounded windowing fixes the over-merge (?F1 +0.139, 6/0)
(#187)
90ab087 feat(eval): Tier 0 (E1) ? over-segmentation-aware rally-seg eval + frozen baseline
(#185)
960c00d docs: rally-quality research + eval-framework roadmap (foundation doc) (#184)
--- ahead of origin/master? ---
=== tier1-windowing uncommitted files (is it touching the gate-A test or windowing?) ===
[/external_agent_tool_result]
```

#### 78. assistant (2026-07-02T06:11:32.930Z)

`tier1-windowing` is **\*\*dormant\*\*** ? checked out at old master (`a3b209a` = #187), zero commits ahead, no WIP. The name was a red herring; no collision risk. So task 2 (gate-A re-grounding) has no active sibling ? I'll do it.

Key constraint: the gate-A test needs the local golden corpus (`output/human\_lovo\_manifest.json`, gitignored, only in the **\*\*main\*\*** checkout) to measure ? a fresh worktree would just skip it. Let me read the full measurement block so I can re-ground all three pinned numbers consistently from one clean measurement.

```

#### 81. assistant (2026-07-02T06:11:32.930Z)

I now have the full test. Only **one** test fails (the proposal-windowing snapshot, lines 178?180); the other corpus-dependent tests in this file still pass on the current corpus. I need the current measured ``mean_delta``, ``mean_seg_off``, ``mean_seg_on`` to re-ground lines 178?180 + the comments/docstring consistently. Let me check the manifest path format and write a small scratch measurement (scratch/ is gitignored, sanctioned) that replicates the test's exact loop.

#### 82. assistant (2026-07-02T06:11:32.930Z)

```

[external_agent_tool_call: Bash]
description: Inspect golden manifest path format
command: cd /c/Users/avidu/Projects/badminton-highlight-indexer
echo "=== manifest exists + path format (absolute?) ==="; python -c "import json;
s=json.load(open('output/human_lovo_manifest.json')); print('specs:',len(s)); print('sample
keys:',list(s[0].keys())); print('traj:',s[0]['trajectory']); print('labels:',s[0]['labels'])"
2>&1
[/external_agent_tool_call]

```

#### 83. assistant (2026-07-02T06:11:32.930Z)

```

[external_agent_tool_result]
=== manifest exists + path format (absolute?) ===
specs: 15
sample keys: ['name', 'trajectory', 'fps', 'frame_width', 'labels']
traj: C:/Users/avidu/Projects/Annotation Setup/Collect/Trajectories/adarsh_avi_full_traj.csv
labels: C:/Users/avidu/Projects/Annotation Setup/Collect/Golden Labelled/Adarsh and
Avi.rallies.csv
[/external_agent_tool_result]

```

#### 84. assistant (2026-07-02T06:11:32.930Z)

Manifest has **15 specs now** (grew from 9 ? that's the drift source), and paths are **absolute** ? so an isolated worktree run with ``SERVED_GATE_A_MANIFEST`` pointing at this manifest will resolve the data. Let me write a faithful scratch measurement (exact copy of the test's loop) and run it in the main checkout to get the current numbers.

direction (on<off): True
[/external_agent_tool_result]
```

#### 91. assistant (2026-07-02T06:11:32.930Z)

Measured on the **current 15-clip corpus** (was 9 at the 2026-06-18 snapshot ? that's the drift):

- `mean\_delta` = **0.0287** (old pin `0.0 ±0.03` ? now marginal)
- `mean\_seg\_off` = **1.364** (old pin `1.16` ? fails)
- `mean\_seg\_on` = **0.792** (old pin `0.64`)
- direction invariant `on < off` still holds ?

The docstring also prose-pins the **served-path** numbers (`9-clip`, `F1 ? -0.034`, ratio `0.83`) for the passing tests ? I'll re-ground those too for an honest, complete update. Let me measure the served aggregate.

## 92. assistant (2026-07-02T06:11:32.931Z)

```
[external_agent_tool_call: Bash]
description: Extend measurement with served-path aggregate and re-run
command: cd /c/Users/avidu/Projects/badminton-highlight-indexer
cat >> scratch/measure_gate_a.py <<'PY'
```

### --- served-path aggregate (tests 85/98/115) for honest docstring re-grounding ---

```
from backend.eval import served_gate_a as sga
res = sga.evaluate_manifest(_SPECS)
agg = sga.aggregate(res)
print("--- SERVED path aggregate ---")
print(f"served n = {len(res)}")
print(f"mean_delta_f1 = {agg['mean_delta_f1']:.4f} (band -0.06..0.03; docstring says ~-0.034)")
print(f"mean_f1_on = {agg['mean_f1_on']:.4f}")
print(f"mean_f1_off = {agg['mean_f1_off']:.4f}")
print(f"f1_on/off ratio = {agg['mean_f1_on']/agg['mean_f1_off']:.4f} (docstring says ~0.83)")
print(f"mean_seg_ratio_off = {agg['mean_seg_ratio_off']:.4f}")
print(f"mean_seg_ratio_on = {agg['mean_seg_ratio_on']:.4f}")
PY
PYTHONPATH=. python scratch/measure_gate_a.py 2>&1 | tail -12
[/external_agent_tool_call]
```

## 93. assistant (2026-07-02T06:11:32.931Z)

```
[external_agent_tool_result]
mean_delta = 0.0287 (pinned: approx 0.0, abs=0.03)
mean_seg_off = 1.3640 (pinned: approx 1.16, abs=0.10)
mean_seg_on = 0.7919 (pinned: approx 0.64, abs=0.10)
direction (on<off): True
--- SERVED path aggregate ---
served n = 15
mean_delta_f1 = -0.0233 (band -0.06..0.03; docstring says ~-0.034)
mean_f1_on = 0.2134
mean_f1_off = 0.2366
f1_on/off ratio = 0.9017 (docstring says ~0.83)
mean_seg_ratio_off = 0.5825
mean_seg_ratio_on = 0.4696
[/external_agent_tool_result]
```

## 94. assistant (2026-07-02T06:11:32.931Z)

All current numbers captured (15-clip corpus, 2026-06-22):

```
| metric | old pin | measured now |
|---|---|---|
| proposal `mean_delta` | ?0.0 | **+0.029** |
| proposal `mean_seg_off` | 1.16 | **1.36** |
| proposal `mean_seg_on` | 0.64 | **0.79** |
| served `mean_delta_f1` | ?-0.034 | **-0.023** |
| served f1 on/off ratio | ?0.83 | **0.90** |
| corpus size | 9 | **15** |
```

All the passing tests' bands still hold; only the proposal snapshot trips. Now I'll create an **\*\*isolated worktree off `origin/master`\*\*** (per the shared-checkout convention) to make the edit safely, since the main checkout is on a sibling-occupied branch.

## 95. assistant (2026-07-02T06:11:32.931Z)

```
[external_agent_tool_call: Bash]
description: Create isolated worktree off origin/master and locate stale numbers
command: cd /c/Users/avidu/Projects/badminton-highlight-indexer
```

```

```
[external_agent_tool_result]
14 CI where the golden trajectories are absent; runs on the owner box where they are
present, over
15 **whatever golden clips are currently on disk** (`_golden_specs` requires >= 6).
16
17 CORPUS NOTE ? re-grounded 2026-06-18 (the golden set is mutable and grows over time).
The
18 original 6 *single-court* golden clips this litmus was first calibrated on (2026-06-14)
have been
19 retired from the box ? their labels are gone ? so the present golden set is the 9
multicourt
20 clips now in `output/` (mahadevpura_1/2, GX0101xx, GX0x0094, Badminton_BXH_2,
```

Boxhill\_Doubles).

21 On that corpus the served path is **\*\*recall-starved\*\***: WASB tracks a single shuttle while several

22 courts rally at once, so ```trajectory_to_action_windows``` emits FEWER windows than there are

23 rallies (served over-seg ratio < 1, i.e. under-segmentation). Because Gate A only ever DROPS

24 windows, on this under-segmented corpus it is mildly **\*\*F1-negative\*\*** (mean served ?F1 ? -0.034),

25 not the ~neutral -0.008 the original 6 showed. Under the permissive PROPOSAL windowing the same

26 gate is ~F1-neutral (?F1 ? -0.001) while still cutting over-segmentation (1.16?0.64).

27

28 The canonical **\*\*+0.074 / 6-of-6 / p=0.031\*\*** Gate-A win was a property of the **\*original-6\*** corpus

29 and is NOT reproduced here (those clips are no longer on the box); it is preserved in the archive

30 (```docs/archives/quality-iterations/2026-06-first-ab-experiment/```). These tests now pin the

31 **\*\*present-corpus\*\*** behaviour so a future windowing/corpus change that silently shifts it trips the

32 litmus. The pinned magnitudes are a date-stamped snapshot of the present golden set and will need

33 re-measurement as the corpus grows.

34 `""`

[/external\_agent\_tool\_result]

#### 100. assistant (2026-07-02T06:11:32.931Z)

Now I'll make the re-grounding edits in the worktree ? updating the docstring CORPUS NOTE, the served-test comment, and the proposal-test snapshot pins, all to the measured 15-clip values, honestly noting this is the second re-grounding.

#### 101. assistant (2026-07-02T06:11:32.931Z)

git commit -m "$(cat <<'EOF'
test(eval): re-ground served Gate-A litmus + QUALITY_ITERATIONS on the 15-clip golden corpus
```

The proposal-windowing snapshot (test\_proposal\_windowing\_gate\_a\_is\_f1\_neutral\_and\_cuts\_over\_seg) was pinned to the 2026-06-18 9-clip corpus (#236). The local golden set has since grown to 15 clips, drifting the measured over-seg ratio off the pinned band (mean\_seg\_off 1.16 -> 1.36) so the

litmus fails locally. Re-measure on the present 15-clip corpus and re-pin:

proposal: mean dF1 +0.03 (was -0.001), over-seg 1.36 -> 0.79 (was 1.16 -> 0.64)

served: mean dF1 -0.023 (was -0.034), f1 on/off ratio 0.90 (was 0.83)

The durable direction-of-effect invariant (seg\_on < seg\_off) is unchanged; only the date-stamped snapshot magnitudes move (the docstring already flags these need re-measurement as the corpus grows).

Skips in CI (corpus absent by design); verified locally: full suite 1418 passed with the manifest.

description: Open PR for gate-A re-grounding
command: cd /c/Users/avidu/Projects/badminton-highlight-indexer/.claude/worktrees/gate-a-
reground
gh pr create --base master --head fix/gate-a-litmus-reground-n15 \
 --title "test(eval): re-ground served Gate-A litmus on the 15-clip golden corpus" \
 --body "$(cat <<'EOF'
```

#### What

The served Gate-A litmus (`tests/test\_served\_gate\_a\_regression.py`) pins date-stamped, corpus-specific snapshots as a tripwire. PR #236 re-grounded it to the **2026-06-18, 9-clip** multicourt corpus. The local golden set has since grown to **15 clips**, drifting the measured over-segmentation ratio off the pinned band so `test_proposal_windowing_gate_a_is_f1_neutral_and_cuts_over_seg`` **fails locally** (`mean_seg_off` 1.16 ? 1.36`). This re-measures on the present 15-clip corpus and re-pins.

#### Re-grounded magnitudes (measured, 15-clip corpus, 2026-06-22)

metric	old pin (9-clip)	re-pinned (15-clip)
proposal `mean_delta` ?F1	? 0.0	++0.03*
proposal `mean_seg_off`	1.16	**1.36**
proposal `mean_seg_on`	0.64	**0.79**
served `mean_delta_f1`	? ?0.034	??0.023**
served f1 on/off ratio	? 0.83	**0.90**

Also updates the matching narrative in `docs/QUALITY\_ITERATIONS.md`.

## Invariant preserved

The durable, corpus-independent guard ? `mean\_seg\_on < mean\_seg\_off` (Gate A only ever drops windows) ?

is unchanged. Only the snapshot magnitudes move; the docstring already flagged these need re-measurement

as the corpus grows. No production code touched.

## Verification

- Full suite (with `SERVED\_GATE\_A\_MANIFEST` ? local corpus, so the litmus runs not skips):

**\*\*1418 passed, 2 skipped\*\*.**

- `ruff` clean.

- ?? This test **\*\*skips in CI by design\*\*** (the golden corpus is absent in CI), so CI green does not exercise it ? verified **\*\*locally\*\*** on the owner box.

## Backlog ? deferred items to revisit

Single tracker for work we consciously deferred, so nothing gets lost between sessions. Each item records **what**, **why** it's deferred, and **the trigger to revisit**. Every entry traces to a real decision/PR/doc (no speculative work).

> Maintained as a version-controlled doc for now. Say the word and I'll mirror any/all of these to **GitHub issues** instead (or in addition).

> Status legend: ? blocks something · ? do when triggered · ? nice-to-have/cleanup.

\_Last updated: 2026-06-10.\_

---

### Owned-model / multisport (source: ``OWNED_MODEL_IMPLEMENTATION_PLAN.md``, ``NEXT_STEPS.md``)

- ? **Rename the repo off "badminton"** ? owner-emphatic "ASAP" action; the project is multisport. Touches remote name + README/CLAUDE.md framing + any hardcoded URLs. **Revisit:** owner action, before broad external sharing.
- ? **Quantify cost-to-Gen-2** (the largest open risk) ? benchmark real VRAM/token/\$ for the VLM SFT+GRPO on a rented A100/L40S (ms-swift multimodal-GRPO examples use 678 GPUs) **before** standing up any owned serving stack. **Revisit:** before Phase-2 commitment.
- ? **Define the ship-gate F1@tIoU target** ? "very high P/R" must be operationalized (floor = beat heuristic LOVO 0.480; learned is now 0.626 post metric-fix). **Revisit:** at M0.4 harness.

### Engineering hardening deferred from the 2026-06-10 audit sweep

- ? **App-factory / lifespan + lazy torch-cv2 imports** ? ``uvicorn backend.main:app`` leaves globals None, and importing the API pulls the GPU stack. Belongs with the `async-job slice (#16)`. **Revisit:** when the `async slice` starts.
- ? **WSL temp/frame/cache + Gemini remote-file GC** ? staged videos, PNG frame dumps, ``*_wasbcache``, and orphaned Gemini uploads are never cleaned. Needs a retention policy. **Revisit:** before any volume/batch processing.
- ? **shlex-quote WSL config values** ? **DONE 2026-06-11 (#97):** ``detectors/base.py:~_wsl_tilde_quote`` quotes everything after a leading ``~/``, so quoting and tilde expansion coexist; applied to every ``~``-capable arg in both runners; ``tests/test_wsl_tilde_quoting.py`` pins the command shapes (no quoted tilde can ever reach ``_wsl_bash``). Found live: the naive quoting had silently broken `wasb_hybrid` staging for the default ``~/clips``. Residual for tenancy-era: quote the remaining trusted-config interpolations (`repo_dir/conda_env`) if config ever becomes per-tenant.

---

### Monetization / licensing

\*(source: ``archives/MONETIZATION_AUDIT.md`` §7, ADR-005)\*

- ? **Ultralytics Enterprise pricing** ? get a quote **only if** the torchvision/ByteTrack detector (PR #8) proves insufficient on real footage. Currently **not needed** (swap done). Quote-only pricing. **Revisit:** if detector quality forces reconsidering YOLOv8.
- ? **Codec patent thresholds (AVC/HEVC/AAC)** ? confirm exact Via-LA (AVC) / Access Advance (HEVC) royalty rates & free thresholds **with legal counsel** before relying on the "small SaaS is under threshold" reading. Mitigation already chosen: emit royalty-free AV1/Opus output. **Revisit:** before commercial launch.
- ? **Per-checkpoint weight/dataset licenses** ? if we borrow pretrained weights (YOLOX, ActionFormer, WASB, TrackNetV3), the **code** license ? the distributed **weights/dataset** terms. Either train our own or confirm each checkpoint. **Revisit:** when adopting any borrowed weights.
- ? **Real GPU \$/video & latency** ? benchmark the three LLM-step options (offline ActionFormer vs self-hosted Qwen2.5-VL-7B vs Gemini paid-tier) on the target VM before pricing the product. **Revisit:** when choosing the production LLM step.

### Detector swap follow-ups

\*(source: PR #8, ADR-005)\*

```
- ? supervision ByteTrack deprecation ? sv.ByteTrack is deprecated as of supervision 0.28.0 and removed in 0.30.0; requirements.txt is pinned <0.30.0 as a stopgap. Migrate to ByteTrackTracker from the separate trackers package before lifting the c...

76:## 4. Architecture (design)
78:### 4a. Freeze seam + reuse map
82:> ? **Correction (audit 2026-06-16):** the replay does **NOT** import `windowing.py` ? there
is no `windowing.build_windows(preset)` / `WindowingPreset` / "default SERVED" call. The
windowing params travel as a **raw 3-tuple `(vt, mg, mwd)`** pinned in each fixture's
`provenance.json` and passed straight to `build_candidates`; the harness deliberately avoids the
named `windowing.SERVED` constant so a future SERVED retune can't silently churn fixtures.
(`segmentation_metrics`, `experiment.compare/Variant.spec_hash`, `regression.save_baseline`,
`eval_stats` are **not** on the M1 replay path either ? the quality-floor gate M4 will add the
baseline/stats pieces.)
84:### 4b. Tiered model (SEALED-FIXTURES)
92:### 4c. Anti-attribution measures (Tier-0)
105:### 4d. The two gates
109:### 4e. Serialization & optional protobuf
110:JSON with `sort_keys=True` + pre-quantized floats + LF is sufficient. **Protobuf is optional
(01)** ? adopt only if cross-OS byte-stable snapshots are wanted (proto3 `rally.fixture.v1`,
codegen + `protoc && git diff --exit-code` guard, `*.pb` binary -text`). Protobuf is **encoding,
not secrecy** (trivially `--decode_raw`).
112:### 4f. Encryption & keys (Tier-1 only)
117:## 5. Threat model (who's protected vs not)
130:## 6. Honest limits ? what a green suite does NOT prove
145:## 7. Deliverables & progress tracker ? **source of truth**
147:Legend: ? Todo . ? In progress . ? Done . ? Blocked/gated. One **small PR per row**,
branched from `origin/master`, no stacking. Update the row (status + PR link) as work lands.
149:| ID | Deliverable | Depends on | Counsel-gated? | Status | PR |
151:| **P0** | **PII leak hygiene (partial ? paths + scan).** Scrubbed personal `C:\Users\?`
paths from code docstrings (`eval_partial_labels.py`, `gemini_refine.py`, `README.md`) + added
`tools/leak_scan.py` (32-hex MD5 + personal-path **structural** guard, optional gitignored
`.leakscan_private` name-list) + a CI `leak-scan` job + tests. ? The **functional video-name
rename** (`eval_baselines/*.json` keys / `rally_seg_eval.MULTICOURT_CLIPS` / quality-log names)
is **DEFERRED** per the owner's safe-scope decision (2026-06-16) ? it's coupled to the
gitignored `output/human_lovo_manifest.json` + data files + the training floor and collides with
the active quality track; run the private-list scan + a coordinated rename before open-sourcing.
Git-history rewrite (PR #77) also deferred. | ? | No | ? | _this PR_ |
152:| **M1** | **Fixture framework + synthetic Tier-0 + shared replay helper** (also delivered

### 136. assistant (2026-07-02T06:11:32.933Z)

Now the golden-fixtures status is clear from its \$7 tracker / \$9 DoD:

- **Done:** M1, M2, M3, MX, P1, P2, P3, DOC ?
- **Open** (not optional ? part of the Definition-of-Done): **M4** (quality-floor gate) ?, **P0** ? (the deferred functional video-name rename)
- **Optional:** O1 (protobuf) ?, O2 (Tier-1 key-gated) ?

So this doc is **not terminal** ? correctly **not** an archival candidate (M4/P0 still open). The deferred/optional items belong in BACKLOG (task 3). Let me read the rest of BACKLOG.md to insert a clean section in the right place and style.

### 137. assistant (2026-07-02T06:11:32.933Z)

### 138. assistant (2026-07-02T06:11:32.933Z)

```
[external_agent_tool_result]
40 *(source: `docs/GOLDEN_SET_IMPLEMENTATION.md`, `docs/GOLDEN_SET_VENDORING.md`)*
41
42 - ? Annotation guideline ? DONE (2026-06-02): authored as the Roora brief +
illustrated guide in the collector repo `docs/annotation/` ? rally CSV schema; ignore dead time
/ include every rally (incl. faults & lets) / shot = one contact; `ending_reason`
(forced/unforced-error taxonomy, shared across net-separated sports); singles & doubles for
badminton & pickleball.
43 - ? Internal gold key ? hand-annotate 5?10 licensed clips to near-perfect as the
vendor answer key. Unblocked. Revisit: anytime.
44 - ? GS-3 ? HumanVendorProvider ? concrete adapter for the chosen annotation vendor
(submit/poll/fetch + DPA/secure-link controls). Vendor selected for the initial pilot: Roora**
(Bengaluru; iMerit / Taskmonk / TELUS remain the fallback shortlist). Revisit: once the
Roora pilot confirms quality, then build the adapter.
45 - ? GS-4 oracle model ? AutomatedProvider interface is stubbed (this work) with a
deterministic fake. Wire a concrete fast-tier auto-labeler later. Oracle rule: it MUST be
a different model lineage than production, or the regression test is blind to shared failures.
Revisit: when a production LLM step is chosen (pick the oracle's lineage to differ).
46 - ? GS-5 ? regression triggers ? wire `regress()` into CI (pre-merge gate), on-
demand CLI (the "surprise" case), and a scheduled run; include a deliberate re-baseline path.
Revisit: after GS-4.
47 - ? Vendor pilot (Roora) ? run the paid pilot with Roora as a single-vendor
pilot first** (not a multi-vendor bake-off): assess quality-per-rupee against the $4 bar;
escalate to the iMerit/Taskmonk fallback only if it misses. Revisit: the pilot doubles as
calibration once the gold key exists.
48 - ? Phase-1 video collection ? gather the round-1 golden corpus per
`docs/GOLDEN_SET_PHASE1_VIDEOS.md`: static self-recorded footage (mirror deployment, not
broadcast), 3 sports incl. singles & doubles, across the diversity matrix; ~12 clips/sport with
? held out by match. Unblocked.
49 - ? Train/eval separation guardrails (was DEFERRED_HARDENING_PLAN #13; design
preserved here on archival 2026-06-14) ? train & eval videos live in separate catalogs
today, kept apart by convention only; nothing enforces that a video used to train the learned
segmenter (`backend/eval/training.py::build_training_set` ? `distill_local`) is absent from the
eval/regression set, so leakage would silently inflate the headline metrics. Concrete design
(from the archived DEFERRED plan $2): split unit = match, never clip (hold ~? of each sport
as eval, per GOLDEN_SET_PHASE1_VIDEOS.md); add a split: "train"|"eval" field to the
collector's curate export manifest (cross-repo contract, ADR-002); DONE ? pure-logic core,
PR #171] backend/eval/splits.py now exists with load_split(manifest) -> (train_ids,
eval_ids) keyed by match id (not file MD5 ? re-encodes share a match but differ in
compute_video_id) + assert_disjoint(train_ids, eval_ids) that raises on overlap, with
tests/test_splits.py (overlapping ids ? assert_disjoint raises). STILL DEFERRED: wire
the guard into the training entrypoint (distill_local / training) and into run_regression.py
(baseline computed strictly on the eval split); add the collector's curate export manifest
split field (above); the integration test (a deliberately-leaked manifest fails the training
```

```
entrypoint). Full rationale/risks: [archives/DEFERRED_HARDENING_PLAN-
COMPLETED-2026-06-14.md](archives/DEFERRED_HARDENING_PLAN-COMPLETED-2026-06-14.md) §2.
Revisit: dedicated design session with the user (needs a collector-side manifest change).
50
51 ## Recording best practices
52 *(source: `docs/VIDEO_RECORDING_GUIDELINES.md`)*
53

[/external_agent_tool_result]
```

#### 144. assistant (2026-07-02T06:11:32.933Z)

Now task 4 (archival): I've verified there's **no clean archival candidate** right now ? `GOLDEN\_REGRESSION\_FIXTURES.md` is non-terminal (M4/P0 open per its §9 DoD), and the only flagged candidate in `DOC\_STATUS.md` (the hardening pointer-stubs, finding #4) explicitly needs owner confirmation ("intentional stubs vs finish-archiving"). Archiving a non-terminal doc would violate the project's own archive policy, so I'm correctly **not** forcing one. Let me commit + push + open the backlog PR.

#### 145. assistant (2026-07-02T06:11:32.933Z)

```

git add docs/BACKLOG.md
```

```
git commit -m "$(cat <<'EOF'
docs(backlog): track golden-regression-fixtures DoD remainder (M4, P0 rename) + optional 01/02

The golden regression fixtures core suite shipped (M1.M2.M3.MX.P1.P2.P3.DOC all done), but
GOLDEN_REGRESSION_FIXTURES.md section 9 keeps the track OPEN until M4 (quality-floor gate) and
the
deferred P0 functional-name rename land. Record them (plus the optional 01 protobuf / 02 Tier-1
items) in BACKLOG.md so the track is not silently treated as "done" while definition-of-done
items
remain. Docs-only; no code change.

optional 01/02" \
 --body "$(cat <<'EOF'
```

### What

The golden regression fixtures core suite has shipped (`M1.M2.M3.MX.P1.P2.P3.DOC` ? ? synthetic + 6 de-attributed real `fx\_r01`?`fx\_r06` fixtures replay cross-OS, leak-guarded, CONTROL-only). But `GOLDEN\_REGRESSION\_FIXTURES.md` §9 keeps the track **open** until **M4** (quality-floor gate) and the deferred **P0** functional-name rename land. This records those ? plus the optional **01**/**02** items ? in `BACKLOG.md` so the track isn't silently treated as "done" while definition-of-done items remain.

### Why a backlog entry, not an archive

Per the repo archive policy (only **terminal-state** docs move to `docs/archives/`), this doc is **not** archive-ready ? M4 + P0 are open in its own §7/§9. So the right move is to backlog the remainder and keep the doc live, not archive it.

### Items added (traced to `GOLDEN\_REGRESSION\_FIXTURES.md` §7)

- ? **M4** ? quality-floor gate + first `regression\_baseline.json` (recommended-next; seed per-slug floor from each `fx\_\*/expected.json` `score`; windowing-fingerprint + CONTROL-only + add to `golden-crossos`).
- ? **P0 remainder** ? functional video-name rename (coupled to the gitignored manifest + training LOVO floor; coordinate via `.leakscan\_private` + `tools.leak\_scan --names`; before open-sourcing).
- ? **01** protobuf deterministic serialization (optional).

- ? **\*\*02\*\*** Tier-1 key-gated path (optional).

Docs-only; no code change.

### 167. assistant (2026-07-02T06:11:32.934Z)

**\*\*No open PRs remain ? all merged.\*\*** One concurrency note: the main checkout is now on a sibling branch `fix/served-gate-a-regrounded-15clip` (a parallel gate-A re-grounding a sibling started **\*after\*** my pre-check; it's now redundant since my #322 landed first ? I left it untouched). My two worktrees are cleaned up.

Let me do a final end-to-end verification: run the full suite against the **\*\*combined\*\*** merged master (each PR's CI ran on its own base; this confirms the union is green) in a throwaway worktree.

### 168. assistant (2026-07-02T06:11:32.934Z)

```
[external_agent_tool_call: Bash]

## 176. assistant (2026-07-02T06:11:32.935Z)

All my worktrees are cleaned up; the rest belong to other live sessions. Everything is done and verified.

## Done ? all four asks complete

**\*\*Merged the green PRs\*\*** (each green CI, coverage-gated full-suite passing; none touching product/strategy/licensing). Final `master` = `9b37269`, and I verified the **\*\*combined\*\*** merged tree end-to-end: **\*\*1428 passed, 2 skipped, 0 failed\*\***.

```
| PR | What | Coverage |
|---|---|---|
| [#316](https://github.com/Khelsutra/badminton-highlight-indexer/pull/316) | docs:
`DATA_IN_GCS.md` corpus map (merged first so #319's `§7` refs resolve) | docs-only |
| [#320](https://github.com/Khelsutra/badminton-highlight-indexer/pull/320) | nightly Cloud-Run
scheduler scripts (`--run-now`, dry-run, `setup_email.sh`) | shell-only |
| [#319](https://github.com/Khelsutra/badminton-highlight-indexer/pull/319) | **(task 1)**
worker date-prefix-strip fix | *** new tests** (suite 1418?1428) |
| [#322](https://github.com/Khelsutra/badminton-highlight-indexer/pull/322) | **(task 2)**
gate-A litmus re-grounding | test+doc |
| [#323](https://github.com/Khelsutra/badminton-highlight-indexer/pull/323) | **(task 3)**
golden-fixtures backlog | docs |
```

**\*\*1. Worker fix\*\*** ? merged via #319. A sibling session had pushed two extra skip-branch coverage tests onto the same branch and merged it while I was mid-flight; I confirmed it green (all 10 checks) rather than racing the merge.

**\*\*2. Gate-A re-grounding\*\*** ? the litmus was stale *\*again\**: #236 pinned the 9-clip corpus, which has since grown to **\*\*15 clips\*\*** (`mean\_seg\_off` drifted 1.16?1.36, failing locally). I re-measured on the current corpus and re-pinned the test + `QUALITY\_ITERATIONS.md` (proposal `1.36?0.79`, served ?F1 `~0.023`, ratio `0.90`), preserving the durable `seg\_on < seg\_off` invariant. ?? This test **\*\*skips in CI by design\*\*** (no corpus there), so I verified locally: full suite **\*\*1418 passed\*\*** with the manifest. Merged via #322.

**\*\*3. Backlog\*\*** ? added a *\*Golden regression fixtures\** section to `BACKLOG.md` for the §9 definition-of-done remainder (**\*\*M4\*\*** quality-floor gate, **\*\*P0\*\*** name-rename) plus optional **\*\*01/02\*\***. Merged via #323.

**\*\*4. Docs fix + archive\*\*** ? "fix" done (the stale gate-A numbers in `QUALITY\_ITERATIONS.md`, via #322). **\*\*Archive: nothing was archive-ready.\*\*** `GOLDEN\_REGRESSION\_FIXTURES.md` is non-terminal (M4/P0 open in its own \$9), and the only flagged candidate in `DOC\_STATUS.md` (the hardening pointer-stubs, finding #4) explicitly needs *your* call ("intentional stubs vs finish-archiving"). Archiving a non-terminal doc would violate the repo's own archive policy, so I deliberately did not force one.

## Two things worth flagging

- **\*\*Heavy concurrency:\*\*** this checkout is shared by ~10 live sessions. I branched my work in isolated worktrees off `origin/master`, staged explicit paths, and cleaned up after myself.
- **\*\*sibling started a \*parallel\* gate-A re-grounding\*\*** (`fix/served-gate-a-regrounded-15clip`, currently checked out in the main checkout and still being committed) **\*\*after\*\*** my pre-check found none in progress. My #322 landed first, so that branch is now redundant ? I left it completely untouched; you may want to close/discard it.

Want me to update the `current-state`/`session-handoff` memory with this checkpoint? I held off because those files are shared with the active sessions and I didn't want to clobber a sibling's update.

### 177. user (2026-07-02T06:11:32.935Z)

yes please update the handoff and the memory and I will trim the concurrency before starting anything new

### 178. assistant (2026-07-02T06:11:32.935Z)

Concurrency will be trimmed first, so it's safe to write the shared memory now. Let me read the current handoff + current-state files so I update them honestly rather than clobber.

### 179. assistant (2026-07-02T06:11:32.935Z)

```

10 # Session handoff ? badminton-highlight-indexer (rename PENDING) + siblings: sports-
data-collector, rally-annotator, sports-obsreport
11
12 **Last updated:** 2026-06-21 (**ALPHA-SHAREABLE session** ? Claude's half of "make it
UI-driven + alpha-shareable" is **DONE**: 3 PRs merged ? engine **#294** exposure-safety boot
posture + khelsutra **#64** SPA `VITE_API_BASE` + **#65** deploy kit. **KEY CORRECTION:** B-P2
(SPA ingest screen) was ALREADY shipped (#56) ? alpha-shareable was a DEPLOY/AUTH task, not an
SPA build. Owner chose the **SPLIT** topology (SPA on CF Pages + `api.*` cloudflared tunnel + CF
Access). Remaining = OWNER stand-up via `khelsutra/deploy/DEPLOY_ALPHA.md`; then engine M11/M12.
Full record [[ui-driven-cloud-serving-gap]]). Prior: HUGE serving session ? M1?M9-auth shipped
(#279?#291) + real M7 L4 run. **Repo is under the `Khelsutra` GitHub org**.
13
14 > **Read order:** this file ? [[current-state]] top (dense per-checkpoint detail) ?
`docs/NEXT_STEPS.md` (the prioritized cross-track plan, refreshed 2026-06-21) ?
```

```

`docs/DOC_STATUS.md` (doc lifecycle/hygiene).
15
16 ## ? You are here (2026-06-21)
17 engine `origin/master` = `0c0e064`+ (past #292/#293/#294) . khelsutra `origin/master` =
`4627830` (past #63/#64/#65) . **no GCP VMs (audited $0)** . engine ~1259 tests green.
18 ***? ALPHA-SHAREABLE SESSION (2026-06-21) ? 3 PRs MERGED; Claude's half of the owner's
top priority is DONE:**
19 - **KEY CORRECTION (anti-spiral [[lesson-verify-engine-surface-before-scoping]]):** the
handoff said "do the B-P2 SPA ingest screen + M7 Cloud Run *service*" ? but **B-P2 was already
shipped** (khelsutra #56, live e2e in `DRY_RUN_CUJ.md` §9) and recon showed alpha-shareable is a
DEPLOY/AUTH task, not an SPA build. CORS is already env-driven; the engine needed no CORS
code.
20 - **Owner decisions (this session):** (1) pursue alpha-shareable via topology **(i)
Tunnel-to-a-box** (2) sub-topology = **SPLIT** (SPA on CF **Pages** + engine on `api.`
cloudflared tunnel + CF Access over both ? engine `HOSTING_PLAN.md` §2), single-origin Caddy
kept as the alternative.
21 - **engine [#294](https://github.com/Khelsutra/badminton-highlight-indexer/pull/294)
(`0c0e064`) ? exposure-safety boot posture:** `backend/config/startup.py` fails fast at boot
(server-only `include_exposure=True`) when `security.edge_auth_enabled` is ON but half-
configured ? `EXPOSED_NO_VIDEO_ROOT` (fatal, jail unset), `EXPOSED_EDGE_AUTH_INCOMPLETE` (fatal,
CF team/AUD), `EXPOSED_AUTH_EXTRA_MISSING` (warn). **Default-OFF** (edge_auth off ? no-op;
worker never opts in). Aligned `auth.resolve_tenant` whitespace-strip. Adversarial 3-lens review
(`wf_35b735a9`) ? no bypass. +16 tests; 1259 green cross-OS.
22 - **khelsutra [#64](https://github.com/avidullu/khelsutra/pull/64) (`8bbc557`) ? SPA
`VITE_API_BASE`:** `apiBase()` env-driven (default same-origin `/api`) + `vite-env.d.ts` + 3
tests; build-smoke proved the override bakes in.
23 - **khelsutra [#65](https://github.com/avidullu/khelsutra/pull/65) (`4627830`) ? alpha
deploy kit:** `deploy/DEPLOY_ALPHA.md` (full split runbook + CORS-preflight gotcha + posture
test + deferred notes) + `deploy/cloudflared.config.example.yml` + README/tracker pointers.
24 - **Discipline:** isolated PRs off `origin/master` (khelsutra in a dedicated
worktree ? main tree had sibling A8 WIP, since merged as #63), default-OFF, adversarial
review, full CI green cross-OS, merged own green PRs, tracker+changelog in-PR. ***? REMAINING for
alpha = OWNER stand-up only** (tunnel + Pages + CF Access + key rotation per
`khelsutra/deploy/DEPLOY_ALP...

10 # Current state ? updated continuously (see [[working-agreement-checkpoints]])
11
12 > **Scope of this file = LIVE only:** the current handoff + *today's* checkpoints + open
PRs/decisions. Keep it read-first-short (?1 page). Older checkpoints are archived in [[current-
state-archive]] ? when today's checkpoints age out (next clean-slate day), move them there,
don't let them pile up here.
13
14 **Checkpoint:** 2026-06-22 (**`worker train` dated-label join FIX [#319] + doc [#321]
MERGED; eval litmus re-grounded [#324] OPEN for owner**). master `db74f9b`. (1) **[#319]** ?
`cmd_train --trajectory-source detector` couldn't match canonical `labels/<YYYY-MM-
DD>_<name>.rallies.csv` to `videos/<name>.mp4` (date prefix ? every clip skipped ? `<2 videos`
abort; `DATA_IN_GCS $7b#1`). Fix = new helper `_label_clip_name()` in
`backend/worker/___main__.py` strips the `.rallies.csv`/`.csv` suffix + a leading
`^\\d{4}-\\d{2}-\\d{2}_`; +6 tests (worker cov 82?84%). (2) **[#321]** ? flipped `DATA_IN_GCS
$7b#1` to ? RESOLVED + $8 tracker row. Both squash-merged (3-dim adversarial verify workflow:
all_ok). (3) **master "broken" locally on `test_served_gate_a_regression`** (`mean_seg_off`
1.16?1.36) ? NOT a code regression: the **golden corpus grew 9?15** (#316 restored the
original-6 single-court labels), see [[golden-corpus-grew-9-to-15]]. I re-measured + re-grounded
it (PR #324) but a **parallel session had already merged the IDENTICAL fix as [#322]**
(`32f4ee6`, same pins 1.36/0.79/+0.03) ? **master already fixed; my #324 closed as a duplicate**
(cross-validated ? independent re-measurement, same numbers). Verified `origin/master` litmus =
5 passed locally. master now `9b37269`. [[gotcha-shared-checkout-branch-collisions]] [[decision-
rigor-norm]]
15
16 **Checkpoint:** 2026-06-22 (**NIGHTLY E2E ? Cloud Run scheduler path FIXED + cloud-
validated, [#320] MERGED**). master `48f9d20`. Owner asked Option A (make
`register_scheduler.sh` actually work) + a trigger command + email setup. **Two bugs caught by
an in-cloud dry-run validation** (build the launcher image ? temp dry-run Cloud Run job ? exec):
(1) the launcher container is `COPY . /app` but Cloud Build excludes `.git` ? `launch.sh`'s `git
archive` failed ? **fixed**: `launch.sh` now tars the baked tree when no `.git` + takes the SHA
from `RALLY_GIT_SHA` (+ a `RALLY_DRY_RUN` smoke mode); (2) `gcloud builds submit --tag` has **no
`-f` flag** ? added `cloudbuild.launcher.yaml` + `--config`. Also: `register_scheduler.sh` auto-
grants the SA IAM (compute.instanceAdmin.v1+iam.serviceAccountUser+run.invoker) + bakes the SHA
+ `--run-now`; new **setup_email.sh** (Gmail app-pw via STDIN ? Secret Manager + SA
secretAccessor). **VALIDATED in-cloud**: image built, the container ran launch.sh (no .git ?
tar, SHA=4051ed5), staged the tarball, hit "Skipping VM create" (dry-run) ? with the earlier
real-L4 run, the FULL Cloud Scheduler?Cloud Run job?launch.sh?ephemeral-GPU-VM chain is proven.
Temp job+image deleted; nightly bucket kept; GCP $0. **? Owner go-live (all from a LOCAL master
checkout, NOT the droplet): `create_nightly_bucket.sh` (done) ? upload clips/labels to
`gs://?/nightly-inputs/` ? `setup_email.sh` ? `register_scheduler.sh --run-now`. Start on
demand: `gcloud run jobs execute nightly-regression-launcher --region asia-south1`.** [[gcp-vm-
always-delete]] [[working-agreement-merging]]

14 **Checkpoint:** 2026-06-22 (**`worker train` dated-label join FIX [#319] + doc [#321]
MERGED; eval litmus re-grounded [#324] OPEN for owner**). master `db74f9b`. (1) **[#319]** ?
`cmd_train --trajectory-source detector` couldn't match canonical `labels/<YYYY-MM-
DD>_<name>.rallies.csv` to `videos/<name>.mp4` (date prefix ? every clip skipped ? `<2 videos`
abort; `DATA_IN_GCS $7b#1`). Fix = new helper `_label_clip_name()` in
`backend/worker/_main_.py` strips the `.rallies.csv`/.csv` suffix + a leading
`^\\d{4}-\\d{2}-\\d{2}_`; +6 tests (worker cov 82?84%). (2) **[#321]** ? flipped `DATA_IN_GCS
$7b#1` to ? RESOLVED + $8 tracker row. Both squash-merged (3-dim adversarial verify workflow:
all_ok). (3) **master "broken" locally on `test_served_gate_a_regression`** (`mean_seg_off`
1.16?1.36) ? NOT a code regression: the **golden corpus grew 9?15** (#316 restored the
original-6 single-court labels), see [[golden-corpus-grew-9-to-15]]. I re-measured + re-grounded
it (PR #324) but a **parallel session had already merged the IDENTICAL fix as [#322]**
(`32f4ee6`, same pins 1.36/0.79/+0.03) ? **master already fixed; my #324 closed as a duplicate**
(cross-validated ? independent re-measurement, same numbers). Verified `origin/master` litmus =
5 passed locally. master now `9b37269`. [[gotcha-shared-checkout-branch-collisions]] [[decision-
rigor-norm]]

current-state.md done. Now the handoff ? refresh the "Last updated" header and the stale master SHA in "You are here", keeping the still-valid serving/alpha plan intact below.

#### 197. assistant (2026-07-02T06:11:32.936Z)

Done ? both living memory files are updated.

### Memory updated

```
`session-handoff.md`
- ***"Last updated"*** ? 2026-06-22, summarizing this merge-sweep session (the 6 PRs now on master, `9b37269`, 1428?, 0 open PRs, docs-archive owner-gated), with a pointer to `current-state` for detail. The prior 2026-06-21 ALPHA-SHAREABLE narrative is preserved (demoted to "Prior").
- ***"? You are here"*** ? added a fresh 2026-06-22 block (current master SHA, ~1428 tests, 0 open engine PRs, the concurrency flag) above the still-valid 2026-06-21 serving/alpha plan, which I left unchanged since it remains the forward plan.

`current-state.md`
- Prepend an authoritative 2026-06-22 checkpoint consolidating the whole session: the 3 ready-green merges (#316?#319?#320 ordering rationale), #322 gate-A re-ground (with the corpus 9?15 drift cause), #323 backlog, the "no archival candidate" finding, and the **combined-master verification (1428? with the corpus)**. I left the sibling-written checkpoint below it intact (it correctly records their #324 being closed as a duplicate of my #322).

`MEMORY.md` index ? already current ([[golden-corpus-grew-9-to-15]] already references "#322 (merged)"), so no change needed.
```

### One thing to trim

When you clean up concurrency: the main checkout is currently sitting on a sibling's branch `**`fix/served-gate-a-regrounded-15clip`**` (the redundant parallel gate-A re-grounding ? its PR #324 was closed as a duplicate of the merged #322). It's safe to discard. The other ~10 worktrees under ``.claude/worktrees/`` are other live sessions' ? your call which to keep. All of `*my*` worktrees from this session are already removed, and there are `**0 open PRs**`.
